On behalf of National Grid, the following summarizes response actions to be performed at the above-referenced site during the timeframe from November 26 to December 7, 2012.

### SITE ACTIVITIES TO BE PERFORMED

- Complete site observation walk.
- Mobilization of Contractor equipment to the Site associated with the electrical substation project.

Due to the recent storms, earthwork associated with the proposed electrical substation upgrades is currently anticipated to begin the week of December 3 or 10, 2012. Notification of the actual start date will be posted on the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and the bulletin boards at the end of Tidewater Street and Bowles Court. Air monitoring will be performed during the earthwork activities as described in GZA's February 20, 2012 *Evaluation of Applicability of Air Pollution Control Regulation No. 9* submittal to the RIDEM Office of Air Resources and GZA's subsequent correspondence with RIDEM dated June 14, 2012 and July 27, 2012. On July 5, 2012, RIDEM issued a letter stating that an air permit for these proposed earthwork activities would not be required. A summary memorandum of the air quality monitoring program which will be implemented during earthwork activities associated with the upcoming electrical substation upgrade project was submitted to RIDEM on September 28, 2012. Once the earthwork activities begin at the Site associated with the electrical substation upgrades, status report updates will be provided on a weekly basis.

Replacement of the meter building associated with natural gas regulator station is currently planned for the week of November 26, 2012. This work consists of aboveground work and will not involve soil excavation. Equipment associated with the building replacement work, including a crane, may be mobilized to the Site during the reporting period.

Please contact me at 401-421-4140 Ext. 2719 if you have any questions or comments.
