**Notes and Definitions**

- U Analyte included in the analysis, but not detected
- SD Surrogate recovery(ies) diluted below the MRL (SD).
- J Reported between MDL and MRL
- E Reported above the quantitation limit; Estimated value (E).
- D Diluted.
- CD- Continuing Calibration %Diff/Drift is below control limit (CD-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1709754

Shipped/Delivered Via: ESS Courier

Date Received: 9/26/2017

Project Due Date: 10/3/2017

Days for Project: 5 Day

1. Air bill manifest present?  No  
Air No.: NA
2. Were custody seals present?  No
3. Is radiation count <100 CPM?  Yes
4. Is a Cooler Present?  Yes  
Temp: 5.3 Iced with: Ice
5. Was COC signed and dated by client?  Yes

6. Does COC match bottles?  Yes
7. Is COC complete and correct?  Yes
8. Were samples received intact?  Yes
9. Were labs informed about short holds & rushes? Yes / No /  NA
10. Were any analyses received outside of hold time? Yes  No

11. Any Subcontracting needed? Yes /  No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received?  Yes / No  
a. Air bubbles in aqueous VOAs?  Yes / No  
b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
a. If metals preserved upon receipt: Date: 9/26/17 Time: 1959 By: [Signature]  
b. Low Level VOA vials frozen: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes /  No  
a. Was there a need to contact the client? Yes / No  
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1709779**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**

*By ESS Laboratory at 4:52 pm, Oct 05, 2017*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

**5035/8260B Volatile Organic Compounds / Low Level**

1709779-01 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (34% @ 50-200%)

1709779-01 Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).  
4-Bromofluorobenzene (68% @ 70-130%)

1709779-02 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (28% @ 50-200%)

1709779-02 Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).  
4-Bromofluorobenzene (69% @ 70-130%)

1709779-03 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (48% @ 50-200%)

1709779-05 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (39% @ 50-200%)

1709779-06 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (35% @ 50-200%)

1709779-06 Surrogate recovery(ies) below lower control limit (S-).  
4-Bromofluorobenzene (67% @ 70-130%)

1709779-08 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (32% @ 50-200%)

1709779-08 Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).  
4-Bromofluorobenzene (67% @ 70-130%)

1709779-09 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (46% @ 50-200%)

1709779-10 Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).  
1,4-Dichlorobenzene-D4 (24% @ 50-200%), Chlorobenzene-d5 (47% @ 50-200%)

1709779-10 Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).  
4-Bromofluorobenzene (62% @ 70-130%), Toluene-d8 (132% @ 70-130%)

**Total Metals**

CJ70220-BSD1 Blank Spike recovery is below lower control limit (B-).  
Cadmium (79% @ 80-120%)

**No other observations noted.**

**End of Project Narrative.**

**Notes and Definitions**

- U Analyte included in the analysis, but not detected
- SC Surrogate recovery(ies) outside of criteria. Reextraction/Reanalysis confirms results (SC).
- S- Surrogate recovery(ies) below lower control limit (S-).
- IC Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).
- D Diluted.
- B- Blank Spike recovery is below lower control limit (B-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1709779

Date Received: 9/27/2017

Shipped/Delivered Via: ESS Courier

Project Due Date: 10/4/2017

Days for Project: 5 Day

1. Air bill manifest present?  No  
Air No.: NA

6. Does COC match bottles?  Yes  No u 9/27/17

2. Were custody seals present?  No

7. Is COC complete and correct?  Yes

3. Is radiation count <100 CPM?  Yes

8. Were samples received intact?  Yes

4. Is a Cooler Present?  Yes  
Temp: 3.4 Iced with: Ice

9. Were labs informed about short holds & rushes? Yes / No / NA

5. Was COC signed and dated by client?  Yes

10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes  No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received? Yes / No   
a. Air bubbles in aqueous VOAs? Yes / No   
b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes  No  
a. If metals preserved upon receipt: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_  
b. Low Level VOA vials frozen: Date: 9/27/17 Time: 1706 By: uc

Sample Receiving Notes:

COC = 6Z-SS-536 (0-2) collected 835; Label = 6Z-SS-537 (0-2) (MeOH vial) collected 835

14. Was there a need to contact Project Manager? Yes/No   
a. Was there a need to contact the client? Yes / No   
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1709819**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED****By ESS Laboratory at 2:40 pm, Oct 05, 2017****Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1709819

Date Received: 9/28/2017

Project Due Date: 10/5/2017

Days for Project: 5 Day

Shipped/Delivered Via: ESS Courier client  
21-11-2017

1. Air bill manifest present?  No  
Air No.: NA
2. Were custody seals present?  No
3. Is radiation count <100 CPM?  Yes
4. Is a Cooler Present?  Yes  
Temp: 4.8 Iced with: Ice
5. Was COC signed and dated by client?  Yes

6. Does COC match bottles?  Yes
7. Is COC complete and correct?  Yes
8. Were samples received intact?  Yes
9. Were labs informed about short holds & rushes? Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received? Yes / No  
a. Air bubbles in aqueous VOAs? Yes / No  
b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes / No  
a. If metals preserved upon receipt: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_  
b. Low Level VOA vials frozen: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No  
a. Was there a need to contact the client? Yes / No  
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1709820**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED****By ESS Laboratory at 2:41 pm, Oct 05, 2017****Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**  
*By ESS Laboratory at 2:00 pm, Oct 10, 2017*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

**SAMPLE RECEIPT**

The following samples were received on October 02, 2017 for the analyses specified on the enclosed Chain of Custody Record.

**The cooler temperature was not within the acceptance limit of <6°C.**

**Low Level VOA vials were frozen by ESS Laboratory on October 2, 2017 at 1646.**

**Notes and Definitions**

- U Analyte included in the analysis, but not detected
- S+ Surrogate recovery(ies) above upper control limit (S+).
- S- Surrogate recovery(ies) below lower control limit (S-).
- IM Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
- IC Internal Standard(s) outside of criteria. Sample was reanalyzed to confirm (IC).
- D Diluted.
- B- Blank Spike recovery is below lower control limit (B-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710285**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**

By ESS Laboratory at 2:59 pm, Oct 18, 2017

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710285

**SAMPLE RECEIPT**

The following samples were received on October 11, 2017 for the analyses specified on the enclosed Chain of Custody Record.

**Low Level VOA vials were frozen by ESS Laboratory on October 11, 2017 at 1641.**

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>
1710285-01	GZ-BW-502 0-2ft	Soil	8260B, 8260B Low, 8270D
1710285-02	GZ-BW-504A 0-2ft	Soil	8260B Low, 8270D
1710285-03	GZ-BW-503 2-4ft	Soil	8260B, 8270D

1710285-08	TB-100917	Solid	8260B Low

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.  
 Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710285

**PROJECT NARRATIVE**

**5035/8260B Volatile Organic Compounds / Low Level**

1710285-01 Reported above the quantitation limit; Estimated value (E).  
 Naphthalene

**5035/8260B Volatile Organic Compounds / Methanol**

C7J0217-CCV1 Continuing Calibration %Diff/Drift is below control limit (CD-).  
 1,4-Dioxane - Screen (46% @ 30%)  
 CJ71324-BSD1 Blank Spike recovery is above upper control limit (B+).  
 Acetone (142% @ 70-130%)

No other observations noted.

End of Project Narrative.

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- J Reported between MDL and MRL
- E Reported above the quantitation limit; Estimated value (E).
- D Diluted.
- CD- Continuing Calibration %Diff/Drift is below control limit (CD-).
- B+ Blank Spike recovery is above upper control limit (B+).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1710285

Shipped/Delivered Via: ESS Courier

Date Received: 10/11/2017

Project Due Date: 10/18/2017

Days for Project: 5 Day

1. Air bill manifest present?  No  
Air No.: NA
2. Were custody seals present?  No
3. Is radiation count <100 CPM?  Yes
4. Is a Cooler Present?  Yes  
Temp: 3.2 Iced with: Ice
5. Was COC signed and dated by client?  Yes

6. Does COC match bottles?  Yes
7. Is COC complete and correct?  Yes
8. Were samples received intact?  Yes
9. Were labs informed about short holds & rushes? Yes / No  NA
10. Were any analyses received outside of hold time? Yes  No

11. Any Subcontracting needed? Yes  No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received?  Yes / No  
a. Air bubbles in aqueous VOAs?  Yes / No  
b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
a. If metals preserved upon receipt: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_  
b. Low Level VOA vials frozen: Date: 10/11/2017 Time: (164) By: ZL

**Sample Receiving Notes:**

GZ-BW-503(2-4) - MeOH does not cover soil in vial JA 10-11-17

Rec'd 8oz jar GZ-BW-504 (0-2) collected 10/10/17 @ 1000 not on COC

14. Was there a need to contact Project Manager?  Yes / No  
a. Was there a need to contact the client?  Yes / No  
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710350**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

*CERTIFICATE OF ANALYSIS*

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710350

**SAMPLE RECEIPT**

The following samples were received on October 13, 2017 for the analyses specified on the enclosed Chain of Custody Record.

**Low Level VOA vials were frozen by client on October 12, 2017.**

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>
1710350-01	GZ-BW-509 2-4ft	Soil	8260B Low, 8270D
1710350-02	TB-101317	Solid	8260B Low

Our certified laboratory provides a full range of services, including the following:

- Soil Characterization
- Petroleum Fingerprinting
- Priority Pollutant Analysis
- Groundwater, Wastewater and Drinking Water Analyses
- PCBs and Pesticides Analysis
- Trace Metals (ICAP/Furnace) Analysis
- Inorganic Analysis by Classic Methods, Flow Analyzer, and Ion Chromatography
- Organics by GC/Mass Spectroscopy
- Microbiology Analysis
- Massachusetts EPH/VPH Analysis
- Siloxanes
- Field Screening and Sample Technician Services

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710517**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED****By ESS Laboratory at 4:46 pm, Oct 26, 2017****Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 1710517

**Notes and Definitions**

U	Analyte included in the analysis, but not detected
IM	Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
D	Diluted.
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1710517  
 Date Received: 10/19/2017  
 Project Due Date: 10/26/2017  
 Days for Project: 5 Day

Shipped/Delivered Via: ESS Courier

- 1. Air bill manifest present?  No  
Air No.: NA
- 2. Were custody seals present?  No
- 3. Is radiation count <100 CPM?  Yes
- 4. Is a Cooler Present?  Yes  
Temp: 4.4 Iced with: Ice
- 5. Was COC signed and dated by client?  Yes

- 6. Does COC match bottles?  No
- 7. Is COC complete and correct?  Yes
- 8. Were samples received intact?  Yes
- 9. Were labs informed about short holds & rushes? Yes / No /  NA
- 10. Were any analyses received outside of hold time? Yes /  No

11. Any Subcontracting needed? Yes /  No  
 ESS Sample IDs: \_\_\_\_\_  
 Analysis: \_\_\_\_\_  
 TAT: \_\_\_\_\_

- 12. Were VOAs received?  Yes / No
- a. Air bubbles in aqueous VOAs?  Yes / No
- b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
 a. If metals preserved upon receipt: Date: \_\_\_\_\_ Time: ~~2:22~~  
 b. Low Level VOA vials frozen: Date: 10/19/17 Time: 2:30

By: \_\_\_\_\_  
 By: [Signature]

**Sample Receiving Notes:**

COC = 8oz jars, rec'd 4oz for GZ-BW-511 (2-4) re 10/19/17

14. Was there a need to contact Project Manager?  Yes / No  
 a. Was there a need to contact the client?  Yes / No  
 Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710518**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED****By ESS Laboratory at 1:36 pm, Oct 26, 2017****Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1710518

Date Received: 10/19/2017

Shipped/Delivered Via: ESS Courier

Project Due Date: 10/26/2017

Days for Project: 5 Day

1. Air bill manifest present?  No

Air No.: NA

6. Does COC match bottles?  Yes

2. Were custody seals present?  No

7. Is COC complete and correct?  Yes

3. Is radiation count <100 CPM?  Yes

8. Were samples received intact?  Yes

4. Is a Cooler Present?  Yes

Temp: 4.4 Iced with: Ice

9. Were labs informed about short holds & rushes? Yes / No /  NA

5. Was COC signed and dated by client?  Yes

10. Were any analyses received outside of hold time? Yes /  No

11. Any Subcontracting needed? Yes /  No

ESS Sample IDs: \_\_\_\_\_

Analysis: \_\_\_\_\_

TAT: \_\_\_\_\_

12. Were VOAs received?  Yes / No

a. Air bubbles in aqueous VOAs?  Yes / No

b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No

a. If metals preserved upon receipt: Date: \_\_\_\_\_

b. Low Level VOA vials frozen: Date: 10/19/17

Time: \_\_\_\_\_

Time: 2207

By: \_\_\_\_\_

By: [Signature]

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes /  No

a. Was there a need to contact the client? Yes /  No

Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
01	174396	Yes	NA	Yes	VOA Vial - Methanol	MeOH	
01	174399	Yes	NA	Yes	VOA Vial - Other	Other	
01	174400	Yes	NA	Yes	VOA Vial - Other	Other	
01	174402	Yes	NA	Yes	8 oz. Jar - Unpres	NP	
02	174395	Yes	NA	Yes	VOA Vial - Methanol	MeOH

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710571**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**

By ESS Laboratory at 5:52 pm, Oct 30, 2017

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

*CERTIFICATE OF ANALYSIS*

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710571

**SAMPLE RECEIPT**

The following samples were received on October 23, 2017 for the analyses specified on the enclosed Chain of Custody Record.

**Low Level VOA vials were frozen by Client on October 20, 2017 at 1630.**

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>
1710571-01	GZ-SB-514 10-11ft	Soil	6010C, 6020A, 7471B, 8100M, 8260B Low, 8270D, 9014
1710571-02	GZ-SB-515 8-9ft	Soil	6010C, 6020A, 7010, 7471B, 8100M, 8260B Low, 8270D, 9014

Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710571

## PROJECT NARRATIVE

### 5035/8260B Volatile Organic Compounds / Low Level

CJ72430-BS1 Blank Spike recovery is above upper control limit (B+).

Vinyl Chloride (131% @ 70-130%)

CJ72515-BS1 Blank Spike recovery is below lower control limit (B-).

Dichlorodifluoromethane (55% @ 70-130%)

CJ72515-BSD1 Blank Spike recovery is below lower control limit (B-).

Dichlorodifluoromethane (61% @ 70-130%)

### Total Metals

CJ72042-SRM1 Standard Reference Material is biased low (R-).

Silver (29% @ 70-130%)

No other observations noted.

End of Project Narrative.

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710571

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- R- Standard Reference Material is biased low (R-).
- D Diluted.
- B+ Blank Spike recovery is above upper control limit (B+).
- B- Blank Spike recovery is below lower control limit (B-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1710571

Date Received: 10/23/2017

Project Due Date: 10/30/2017

Days for Project: 5 Day

Shipped/Delivered Via: Client

- 1. Air bill manifest present?  No  
Air No.: NA
- 2. Were custody seals present?  No
- 3. Is radiation count <100 CPM?  Yes
- 4. Is a Cooler Present?  Yes  
Temp: 4.1 Iced with: Ice
- 5. Was COC signed and dated by client?  Yes

- 6. Does COC match bottles?  Yes
- 7. Is COC complete and correct?  Yes
- 8. Were samples received intact?  Yes
- 9. Were labs informed about **short holds & rushes**? Yes / No / NA
- 10. Were any analyses received outside of hold time? Yes  No

11. Any Subcontracting needed? Yes  No  
 ESS Sample IDs: \_\_\_\_\_  
 Analysis: \_\_\_\_\_  
 TAT: \_\_\_\_\_

12. Were VOAs received?  Yes / No  
 a. Air bubbles in aqueous VOAs?  Yes / No  
 b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
 a. If metals preserved upon receipt: Date: \_\_\_\_\_  
 b. Low Level VOA vials frozen: Date: 10/20/17

Time: \_\_\_\_\_  
 By: \_\_\_\_\_  
 By: Client  
wr 10/23/17

Sample Receiving Notes:

14. Was there a need to contact Project Manager?  Yes /  No  
 a. Was there a need to contact the client?  Yes /  No  
 Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710573**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**

By ESS Laboratory at 5:21 pm, Oct 30, 2017

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710573

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- D Diluted.
- B+ Blank Spike recovery is above upper control limit (B+).
- B- Blank Spike recovery is below lower control limit (B-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1710573

Date Received: 10/23/2017

Project Due Date: 10/30/2017

Days for Project: 5 Day

Shipped/Delivered Via: Client

1. Air bill manifest present?  No  
Air No.: NA
2. Were custody seals present?  No
3. Is radiation count <100 CPM?  Yes
4. Is a Cooler Present?  Yes  
Temp: 4.1 Iced with: Ice
5. Was COC signed and dated by client?  Yes

6. Does COC match bottles?  Yes
7. Is COC complete and correct?  Yes
8. Were samples received intact?  Yes
9. Were labs informed about **short holds & rushes**? Yes / No  NA
10. Were any analyses received outside of hold time? Yes /  No

11. Any Subcontracting needed? Yes /  No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received?  Yes / No  
a. Air bubbles in aqueous VOAs? Yes / No  
b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
a. If metals preserved upon receipt: Date: \_\_\_\_\_ Time: \_\_\_\_\_  
b. Low Level VOA vials frozen: Date: 10/23/17 Time: 1630

By: \_\_\_\_\_  
By: Client  
ur 10/23/17

Sample Receiving Notes:

14. Was there a need to contact Project Manager?  Yes / No  
a. Was there a need to contact the client?  Yes / No  
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
01	175186	Yes	NA	Yes	4 oz. Jar - Unpres	NP	
01	175189	Yes	NA	Yes	VOA Vial - Methanol	MeOH	
01	175190	Yes	NA	Yes	VOA Vial - Other	Other	
01	175191	Yes	NA	Yes	VOA Vial - Other	Other	
02	175185	Yes	NA	Yes	4 oz. Jar - Unpres	NP	
02	175188	Yes	NA	Yes	VOA Vial - Methanol	MeOH

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710601**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED****By ESS Laboratory at 5:03 pm, Oct 31, 2017****Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710601

**SAMPLE RECEIPT**

The following samples were received on October 24, 2017 for the analyses specified on the enclosed Chain of Custody Record.

**Low Level VOA vials were frozen by ESS Laboratory on October 24, 2017 at 1507.**

**Volatile Analysis:** There were inconsistent naphthalene results from the Low Level VOA Analysis, High Level Methanol VOA analysis and 8270 analysis. The second Low Level vial was analyzed with similar results. The Low Level VOA analysis may be producing an inefficient extraction due to sample matrix and/or nonhomogeneous sample.

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>

PROJECT NARRATIVE

**5035/8260B Volatile Organic Compounds / Low Level**

1710601-01 Reported above the quantitation limit; Estimated value (E).

Naphthalene

CJ72515-BS1 Blank Spike recovery is below lower control limit (B-).

Dichlorodifluoromethane (55% @ 70-130%)

CJ72515-BSD1 Blank Spike recovery is below lower control limit (B-).

Dichlorodifluoromethane (61% @ 70-130%)

**5035/8260B Volatile Organic Compounds / Methanol**

C7J0424-CCV1 Continuing Calibration %Diff/Drift is below control limit (CD-).

1,4-Dioxane - Screen (48% @ 30%)

CJ72721-BS1 Blank Spike recovery is below lower control limit (B-).

1,2,3-Trichloropropane (67% @ 70-130%), 2-Hexanone (65% @ 70-130%), Bromoform (66% @ 70-130%), Chloroethane (69% @ 70-130%), Tetrahydrofuran (67% @ 70-130%), Vinyl Acetate (68% @ 70-130%)

CJ72721-BSD1 Blank Spike recovery is below lower control limit (B-).

1,2,3-Trichloropropane (65% @ 70-130%), 1,2-Dibromo-3-Chloropropane (68% @ 70-130%), 1,4-Dioxane - Screen (0% @ 44-241%), 2-Butanone (67% @ 70-130%), 2-Hexanone (65% @ 70-130%), Bromoform (61% @ 70-130%), Dibromochloromethane (62% @ 70-130%), Tetrahydrofuran (64% @ 70-130%), trans-1,3-Dichloropropene (63% @ 70-130%), Vinyl Acetate (66% @ 70-130%)

No other observations noted.

End of Project Narrative.

**Notes and Definitions**

- U Analyte included in the analysis, but not detected
- J Reported between MDL and MRL
- E Reported above the quantitation limit; Estimated value (E).
- D Diluted.
- CD- Continuing Calibration %Diff/Drift is below control limit (CD-).
- B- Blank Spike recovery is below lower control limit (B-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1710601

Date Received: 10/24/2017

Project Due Date: 10/31/2017

Days for Project: 5 Day

Shipped/Delivered Via: ESS Courier

1. Air bill manifest present?  No  
Air No.: NA

6. Does COC match bottles?  Yes

2. Were custody seals present?  No

7. Is COC complete and correct?  Yes

3. Is radiation count <100 CPM?  Yes

8. Were samples received intact?  Yes

4. Is a Cooler Present?  Yes  
Temp: 2.1 Iced with: Ice

9. Were labs informed about **short holds & rushes**? Yes / No / NA

5. Was COC signed and dated by client?  Yes

10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received? Yes / No  
a. Air bubbles in aqueous VOAs? Yes / No  
b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved? Yes / No  
a. If metals preserved upon receipt: Date: \_\_\_\_\_  
b. Low Level VOA vials frozen: Date: 10/24/17

Time: \_\_\_\_\_ By: \_\_\_\_\_  
Time: 1:37 By: ax

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No  
a. Was there a need to contact the client? Yes / No  
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_

Time: \_\_\_\_\_ By: \_\_\_\_\_

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
01	175509	Yes	NA	Yes	4 oz. Jar - Unpres	NP	
01	175511	Yes	NA	Yes	VOA Vial - Methanol	MeOH	
01	175514	Yes	NA	Yes	VOA Vial - Other	Other	
01	175515	Yes	NA	Yes	VOA Vial - Other	Other	
02	175510	Yes	NA	Yes	VOA Vial - Methanol	MeOH	
02	175513	Yes	NA	Yes	VOA Vial - Other	Other	

2nd Review  
Are barcode labels on correct containers? Yes / No

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710683**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**  
*By ESS Laboratory at 5:01 pm, Nov 01, 2017*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

*CERTIFICATE OF ANALYSIS*

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710683

**SAMPLE RECEIPT**

The following samples were received on October 26, 2017 for the analyses specified on the enclosed Chain of Custody Record.

**Low Level VOA vials were frozen by ESS Laboratory on October 26, 2017 at 15:38.**

<u>Lab Number</u>	<u>Sample Name</u>	<u>Matrix</u>	<u>Analysis</u>
1710683-01	GZ-BW-501 0-2ft	Soil	8260B Low, 8270D
1710683-02	TB-102617	Soil	8260B Low

*CERTIFICATE OF ANALYSIS*

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710683

**PROJECT NARRATIVE**

**5035/8260B Volatile Organic Compounds / Low Level**

- C7J0407-CCV1 Continuing Calibration %Diff/Drift is above control limit (CD+).  
Bromomethane (44% @ 30%)
- CJ72623-BS1 Blank Spike recovery is above upper control limit (B+).  
Acetone (133% @ 70-130%)
- CJ72623-BSD1 Blank Spike recovery is above upper control limit (B+).  
Bromomethane (133% @ 70-130%)
- CJ72623-BSD1 Blank Spike recovery is below lower control limit (B-).  
1,4-Dioxane (66% @ 70-130%)
- CJ72623-BSD1 Relative percent difference for duplicate is outside of criteria (D+).  
Bromomethane (30% @ 25%)

**8270D Polynuclear Aromatic Hydrocarbons**

- 1710683-01 Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).  
Perylene-d12 (205% @ 50-200%)

No other observations noted.

End of Project Narrative.

ESS Project ID: 1710683  
 Date Received: 10/26/2017  
 Project Due Date: 11/2/2017  
 Days for Project: 5 Day

Shipped/Delivered Via: ESS Courier

- 1. Air bill manifest present?  No  
 Air No.: NA
- 2. Were custody seals present?  No
- 3. Is radiation count <100 CPM?  Yes
- 4. Is a Cooler Present?  Yes  
 Temp: 2.9 Iced with: Ice
- 5. Was COC signed and dated by client?  Yes

- 6. Does COC match bottles?  Yes
- 7. Is COC complete and correct?  Yes
- 8. Were samples received intact?  Yes
- 9. Were labs informed about short holds & rushes? Yes / No /  NA
- 10. Were any analyses received outside of hold time? Yes /  No

11. Any Subcontracting needed? Yes /  No  
 ESS Sample IDs: \_\_\_\_\_  
 Analysis: \_\_\_\_\_  
 TAT: \_\_\_\_\_

- 12. Were VOAs received?  Yes / No
- a. Air bubbles in aqueous VOAs? Yes / No
- b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
 a. If metals preserved upon receipt: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_  
 b. Low Level VOA vials frozen: Date: 10/26/17 Time: 1538 By: RL

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes /  No  
 a. Was there a need to contact the client? Yes / No  
 Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1710790**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**  
*By ESS Laboratory at 2:31 pm, Nov 07, 2017*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

# ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM  
 Shipped/Delivered Via: ESS Courier

ESS Project ID: 1710790  
 Date Received: 10/31/2017  
 Project Due Date: 11/7/2017  
 Days for Project: 5 Day

- 1. Air bill manifest present?  No  
Air No.: NA
- 2. Were custody seals present?  No
- 3. Is radiation count <100 CPM?  Yes
- 4. Is a Cooler Present?  Yes  
Temp: 1.8 Iced with: Ice
- 5. Was COC signed and dated by client?  Yes

- 6. Does COC match bottles?  Yes
- 7. Is COC complete and correct?  Yes
- 8. Were samples received intact?  Yes
- 9. Were labs informed about short holds & rushes? Yes / No  NA
- 10. Were any analyses received outside of hold time? Yes  No

11. Any Subcontracting needed? Yes /  No  
 ESS Sample IDs: \_\_\_\_\_  
 Analysis: \_\_\_\_\_  
 TAT: \_\_\_\_\_

- 12. Were VOAs received?  Yes /  No
- a. Air bubbles in aqueous VOAs?  Yes /  No
- b. Does methanol cover soil completely?  Yes /  No /  NA

13. Are the samples properly preserved?  Yes /  No  
 a. If metals preserved upon receipt: Date: 10/31/17 Time: 1805 By: [Signature]  
 b. Low Level VOA vials frozen: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

Sample Receiving Notes:  
 \_\_\_\_\_  
 \_\_\_\_\_

14. Was there a need to contact Project Manager? Yes /  No  
 a. Was there a need to contact the client? Yes /  No  
 Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

**ESS Laboratory Work Order Number: 1710793**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**  
*By ESS Laboratory at 6:26 pm, Nov 07, 2017*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: GZA GeoEnvironmental, Inc.  
Client Project ID: Former Tidewater Facility

ESS Laboratory Work Order: 1710793

**PROJECT NARRATIVE**

**5035/8260B Volatile Organic Compounds / Low Level**

CK70133-BS1 Blank Spike recovery is below lower control limit (B-).  
1,4-Dioxane (69% @ 70-130%), Dichlorodifluoromethane (58% @ 70-130%)

CK70133-BSD1 Blank Spike recovery is below lower control limit (B-).  
1,4-Dioxane (67% @ 70-130%), Dichlorodifluoromethane (58% @ 70-130%)

**8270D Polynuclear Aromatic Hydrocarbons**

C7K0001-CCV1 Continuing Calibration %Diff/Drift is below control limit (CD-).  
2-Methylnaphthalene (28% @ 20%), Nitrobenzene-d5 (25% @ 20%)

**Total Metals**

CJ73153-BSD1 Blank Spike recovery is below lower control limit (B-).  
Selenium (73% @ 80-120%), Thallium (69% @ 80-120%)

CJ73153-BSD2 Relative percent difference for duplicate is outside of criteria (D+).  
Lead (22% @ 20%)

**No other observations noted.**

**End of Project Narrative.**

**CURRENT SW-846 METHODOLOGY VERSIONS**

**Analytical Methods**

1010A - Flashpoint  
6010C - ICP  
6020A - ICP MS  
7010 - Graphite Furnace  
7196A - Hexavalent Chromium  
7470A - Aqueous Mercury  
7471B - Solid Mercury  
8011 - EDB/DBCP/TCP  
8015C - GRO/DRO  
8081B - Pesticides  
8082A - PCB  
8100M - TPH  
8151A - Herbicides  
8260B - VOA  
8270D - SVOA  
8270D SIM - SVOA Low Level  
9014 - Cyanide  
9038 - Sulfate  
9040C - Aqueous pH  
9045D - Solid pH (Corrosivity)  
9050A - Specific Conductance  
9056A - Anions (IC)  
9060A - TOC  
9095B - Paint Filter  
MADEP 04-1.1 - EPH / VPH

**Prep Methods**

3005A - Aqueous ICP Digestion  
3020A - Aqueous Graphite Furnace / ICP MS Digestion  
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion  
3060A - Solid Hexavalent Chromium Digestion  
3510C - Separatory Funnel Extraction  
3520C - Liquid / Liquid Extraction  
3540C - Manual Soxhlet Extraction  
3541 - Automated Soxhlet Extraction  
3546 - Microwave Extraction  
3580A - Waste Dilution  
5030B - Aqueous Purge and Trap  
5030C - Aqueous Purge and Trap  
5035 - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

**Notes and Definitions**

- U Analyte included in the analysis, but not detected
- D+ Relative percent difference for duplicate is outside of criteria (D+).
- D Diluted.
- CD- Continuing Calibration %Diff/Drift is below control limit (CD-).
- B- Blank Spike recovery is below lower control limit (B-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

**ESS Laboratory Work Order Number: 1712222**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**

*By ESS Laboratory at 3:44 pm, Dec 18, 2017*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

**Notes and Definitions**

- U Analyte included in the analysis, but not detected
- IM Internal Standard(s) outside of criteria due to matrix (UCM/coelution is present) (IM).
- D Diluted.
- CD- Continuing Calibration %Diff/Drift is below control limit (CD-).
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1712222

Date Received: 12/8/2017

Project Due Date: 12/15/2017

Days for Project: 5 Day

Shipped/Delivered Via: \_\_\_\_\_ Client \_\_\_\_\_

1. Air bill manifest present?  No  
Air No.: \_\_\_\_\_ NA \_\_\_\_\_

2. Were custody seals present?  No

3. Is radiation count <100 CPM?  Yes

4. Is a Cooler Present?  Yes  
Temp: 3.9 Iced with: Ice

5. Was COC signed and dated by client?  Yes

6. Does COC match bottles?  Yes

7. Is COC complete and correct?  Yes

8. Were samples received intact?  Yes

9. Were labs informed about **short holds & rushes**? Yes / No / NA

10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes  No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received?  Yes / No  
a. Air bubbles in aqueous VOAs?  Yes / No  
b. Does methanol cover soil completely?  Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
a. If metals preserved upon receipt: Date: 12/8/17 Time: \_\_\_\_\_ By: \_\_\_\_\_  
b. Low Level VOA vials frozen: Date: 12/8/17 Time: 1538 By: [Signature]

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes /  No  
a. Was there a need to contact the client? Yes / No  
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

## CERTIFICATE OF ANALYSIS

Sarah McLeod  
GZA GeoEnvironmental, Inc.  
530 Broadway  
Providence, RI 02909

**RE: Former Tidewater Facility (05.0043654.00)**  
**ESS Laboratory Work Order Number: 1712473**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED***By ESS Laboratory at 10:16 am, Dec 28, 2017***Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

ESS Project ID: 1712473

Date Received: 12/20/2017

Project Due Date: 12/28/2017

Days for Project: 5 Day

Shipped/Delivered Via: Client

1. Air bill manifest present?  No  
Air No.: NA
2. Were custody seals present?  No
3. Is radiation count <100 CPM?  Yes
4. Is a Cooler Present?  Yes  
Temp: 4.9 Iced with: Ice
5. Was COC signed and dated by client?  Yes

6. Does COC match bottles?  Yes
7. Is COC complete and correct?  Yes
8. Were samples received intact?  Yes
9. Were labs informed about **short holds & rushes**? Yes / No /  NA
10. Were any analyses received outside of hold time? Yes /  No

11. Any Subcontracting needed? Yes /  No  
ESS Sample IDs: \_\_\_\_\_  
Analysis: \_\_\_\_\_  
TAT: \_\_\_\_\_

12. Were VOAs received? Yes /  No  
a. Air bubbles in aqueous VOAs? Yes / No  
b. Does methanol cover soil completely? Yes / No / NA

13. Are the samples properly preserved?  Yes / No  
a. If metals preserved upon receipt: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_  
b. Low Level VOA vials frozen: Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes /  No  
a. Was there a need to contact the client? Yes / No  
Who was contacted? \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_ By: \_\_\_\_\_

**ESS Laboratory Work Order Number: 1712474**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED****By ESS Laboratory at 10:18 am, Dec 28, 2017****Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

### Notes and Definitions

- U Analyte included in the analysis, but not detected
- D Diluted.
- ND Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- MDL Method Detection Limit
- MRL Method Reporting Limit
- LOD Limit of Detection
- LOQ Limit of Quantitation
- DL Detection Limit
- I/V Initial Volume
- F/V Final Volume
- § Subcontracted analysis; see attached report
- 1 Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
- 2 Range result excludes concentrations of target analytes eluting in that range.
- 3 Range result excludes the concentration of the C9-C10 aromatic range.
- Avg Results reported as a mathematical average.
- NR No Recovery
- [CALC] Calculated Analyte
- SUB Subcontracted analysis; see attached report
- RL Reporting Limit
- EDL Estimated Detection Limit

**RE: Tidewater LDI (03.0043654.00)**  
**ESS Laboratory Work Order Number: 1801186**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**  
*By ESS Laboratory at 11:42 am, Jan 19, 2018*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Thielsch Engineering, Inc.  
195 Frances Avenue  
Cranston, RI 02910

**RE: Tidewater LDI (03.0043654.00)**  
**ESS Laboratory Work Order Number: 1801247**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**  
*By ESS Laboratory at 1:37 pm, Jan 22, 2018*

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

## **APPENDIX G**

### **GROUNDWATER MODELING RESULTS**

## APPENDIX G GROUNDWATER MODELING RESULTS

### INTRODUCTION

GZA developed and calibrated a three-dimensional numerical groundwater flow model for the area surrounding the Former Tidewater Facility (Site) to evaluate potential variations to groundwater flow conditions following the completion of the proposed remedial activities (e.g., containment wall installation, impermeable cap placement). The model was developed using the United States Department of Defense Groundwater Modeling System (GMS), Version 10.1.3, produced by the Environmental Modeling Research Laboratory (EMRL) of Brigham Young University. GMS incorporates the United States Geological Survey modular, finite difference groundwater flow solution known as MODFLOW-2005. Within the model, the equations governing groundwater flow are numerically solved for a point located at the center of each grid block within a three-dimensional numerical grid.

The numerical simulations were run assuming steady state conditions (i.e., groundwater inputs, groundwater discharge, hydraulic head and hydraulic boundary conditions are constant over time). The numerical model was calibrated assuming mid-tide conditions, where the stage of the Seekonk River was assumed to be Mean Sea Level. The model was calibrated to field-measured groundwater elevation data collected between 2011 and 2017. The groundwater elevation data at each monitoring well was averaged to represent the steady state, mid-tide groundwater flow conditions.

### MODEL DEVELOPMENT

#### Numerical Model Domain and Boundary Conditions

The horizontal footprint of the active model domain (i.e., area included in numerical simulations) was selected to adequately represent the natural hydrogeological boundary conditions surrounding the Site. The model domain and hydraulic boundary conditions included within the calibrated steady state model are shown on Figure G-1 and discussed below.

- **External Boundary:** The western model boundary was aligned to be consistent with the topographic divide located to the west of the Site. A no flow (zero flux) boundary condition was applied to the external boundary along this topographic divide, which assumes that the local groundwater divide mimics the topographic divide. While limited underflow into and out of the watershed may occur locally across this topographic divide, at least seasonally, these fluxes likely would not have a noticeable effect on the numerical simulations. The north and south model boundaries were aligned to be perpendicular to the presumed groundwater equipotential/contour lines, assuming overall groundwater flow directions towards the Seekonk River. Given that these boundaries are parallel to groundwater flow (i.e., flow does not occur across these boundaries), no flow boundary conditions were also applied to these external boundaries. These boundaries were assigned at a sufficient distance from the Site, so model boundary effects would not influence the solution of the post-remedy simulation. The eastern model extents were chosen to represent the approximate center of the Seekonk River. A no flow

boundary condition was also applied here because, based on general hydrogeologic principles, this location represents a groundwater divide due to groundwater discharging from the west and east into the Seekonk River.

- **Constant Head Boundaries:** A constant head boundary was assigned in model layer 2 to simulate the Seekonk River stage. Because the surface water in the Seekonk River has a higher density than the surrounding groundwater, the following equation was used to calculate an equivalent freshwater head for the median-tide stage (0.0 feet NAVD 88).

$$h_f = z + h_s \frac{\rho_s}{\rho_f}$$

Where:  $h_f$  = equivalent freshwater head (feet);  
 $z$  = elevation head, referenced to the water surface as a datum (feet);  
 $h_s$  = surface water (saline water) pressure head (feet);  
 $\rho_s$  = density of surface water (1.03 g/cm<sup>3</sup>); and  
 $\rho_f$  = density of fresh water (1.0 g/cm<sup>3</sup>).

A surface water depth of 3 feet (i.e., the approximate water depth adjacent to the existing bulkheads) results in an equivalent freshwater head of approximately 0.1 feet, by:

$$h_f = -3 + 3 \frac{1.03}{1.0}$$

Therefore, the constant head boundary was simulated at 0.1 feet. The constant head boundary is shown on Figure G-1.

- **Areal Recharge:** Areal groundwater recharge is intended to represent the amount of total precipitation that actually reaches the groundwater zone and excludes losses due to surface water runoff and evapotranspiration. The average annual precipitation within the model domain is approximately 47 inches (USGS, 1991; NOAA station USW00014765). Under pre-developed conditions, it has been estimated that approximately 21 to 28 inches/year and 8 to 9 inches/year of the annual precipitation recharges the groundwater system in areas of surficial glacial drift and glacial till deposits, respectively (USGS, 1991; USGS, 1997; USGS, 2006). However, in developed areas such as the area surrounding the Former Tidewater Facility, groundwater recharge rates are reduced. The calibrated recharge rates are discussed in the model calibration section further below and the recharge areas are shown on Figure G-1.
- **Drain Boundaries:** Two 24" drains are located below the groundwater table in the substation portion of the Site. Site groundwater contour plans (2011, 2013, 2015) under existing conditions indicate that both drains, or the associated bedding material, are influencing (i.e., depressing, lowering) local groundwater elevations. Therefore, drain boundaries were simulated along the alignment of these two drains. The drain elements enable groundwater to discharge from the model domain if the calculated shallow groundwater elevations are higher than the drain's invert elevation. The surveyed invert elevations at the drain outfall locations were modeled, with the

drain boundary sloping upwards 0.5 – 1.0% to the west of the outfalls (TM 970, CSO Control Alternatives Development, October 2011; Haws, 2009). The drain locations are shown on Figure G-1 and the calibrated values are presented in the model calibration section.

The surveyed outfall invert elevations for the remainder of the drains at the Site (e.g., the 48" City of Pawtucket storm drain (south of the substation) and the 24" City of Pawtucket storm sewer outfall (in the SFA)) indicate that they are above the water table.

- **Horizontal Flow Barrier (HFB) Boundaries:** The existing bulkheads along the perimeter of the Seekonk River are modeled as HFBs within the model domain. The simulated HFB alignments and extents reflect the actual bulkhead construction/conditions in the field, based on data obtained during GZA's bathymetric and shoreline survey performed on October 11 and 12, 2017. Existing bulkhead construction types were categorized as:
  - 1) Timber sheeting and timber pile supported stone wall;
  - 2) Steel sheeting and battered timber pile supported stone wall;
  - 3) Rip rap sloped revetment;
  - 4) Articulating concrete mattress;
  - 5) Outboard timber pile supported stone wall; and
  - 6) Rip rap sloped revetment supported stone wall.

The tip elevations of the existing bulkheads were assumed to range between -15 and -20 feet (NAVD 88). Horizontal flow barriers were also used to simulate existing retaining walls in the central portion of the Former Gas Plant Area (FGPA). The location of the HFBs is presented on Figure G-1 and the calibrated values for these boundaries are presented in the model calibration section.

#### Horizontal and Vertical Grid Discretization

A refined horizontal grid spacing of 10 feet x 10 feet was used in the vicinity of the Site to better simulate the alignment of the existing bulkheads (calibration model) and proposed containment wall (forecast model). The horizontal grid spacing was increased to 100 feet x 100 feet near the boundaries of the model domain. Additionally, the model grid was rotated approximately 14° west from north, to more accurately simulate the alignment of the existing bulkheads and proposed containment wall at the Site.

To adequately simulate the hydrogeologic units discussed below, the model was separated into 8 layers. The tip elevation of the entire proposed containment wall was conservatively modeled at -40 feet (NAVD 88). To facilitate the numerical simulation of the proposed containment wall, the bottom elevation of model layer 5 was set to -40 feet. The top/bottom elevations of the other model layers were selected to reflect the approximate boundaries of the hydrogeologic units based on onsite and offsite boring log information.

### Hydrogeologic Units/Hydrostratigraphy

The three-dimensional hydrostratigraphic model was simulated based on surficial and subsurface information from the following sources:

- Overburden borings performed at the Site by GZA;
- Overburden borings performed at the Site by others;
- Overburden borings performed at adjacent properties by others;
- Overburden and bedrock borings performed in the model area by the USGS;
- Historical geological information and maps published by the USGS (USGS, 1961); and
- Geological and hydrogeological information and data sets (e.g., geologic cross-sections) documented in earlier reports for the Site, such as the January 2011 *Site Investigation Data Report* prepared by GZA and the December 1996 *Remedial Investigation at the Tidewater Site Pawtucket, Rhode Island* prepared by Atlantic Environmental Services, Inc.

After reviewing these datasets, the hydrostratigraphic model included the following overburden hydrogeologic units: fill, river soft sediments, sand (outwash deposits), discontinuous silt, and glacial till.<sup>1</sup> Based on the USGS boring log information (i.e., groundwater levels in the uplands portion of the local watershed were below the bedrock surface) and to facilitate the simulation of the bedrock outcrop at the Site, the upper 50 feet of bedrock were also simulated. In addition, the sand unit was separated in two hydrogeologic units (uplands sand and sand) based on the historical USGS geological mapping of the Providence area (USGS, 1961). Within model layers 1 and 2, high hydraulic conductivity cells (500 feet/day) simulated surface water within the boundary of the Seekonk River. Therefore, the top of model layer 3 represented the river mudline, derived directly from GZA's October 2017 bathymetric survey.

GZA directly imported the boring log information into GMS. The geologic contacts were selected at each boring location to simulate the horizontal and vertical boundaries of the hydrogeologic units. The top elevation of the glacial till and the bedrock surface generally slope downwards towards the Seekonk River. As reported by the USGS (1961), the modeled thickness of the glacial outwash deposits (sand) decreased to the west of the Site. Near the western boundary of the model domain, the surficial soils are reportedly glacial till, which directly overlie bedrock (USGS, 1961). The following table summarizes the vertical distribution of the hydrogeologic units within the numerical model. The spatial distribution of the hydrogeologic units within each model layer is presented on Figures G-2 through G-5.

---

<sup>1</sup> As shown on Figures G-2 through G-5, multiple hydrogeologic units are simulated within each model layer (excluding Layer 8), and certain hydrogeologic units are present in multiple model layers (e.g., sand is present in model Layers 2 through 6 at the Site). Therefore, the hydrogeologic units do not correspond to individual layers within the model.

Hydrogeologic Unit	Description	Model Layer(s)
<b>Fill</b>	Fine to coarse sand, gravel and silt. Contains bricks, organics, wood, concrete, metal, slag, and ash. Approximately 10 to 35 feet thick at the Site.	Uplands (West of Site): N/A Site: 1 – 3 Seekonk River: N/A
<b>River Soft Sediments</b>	Very loose, silt. Contains sand and gravel. Approximately 10 – 15 feet thick in the vicinity of the Site.	Uplands: N/A Site: N/A Seekonk River: 3
<b>Glacial Outwash (Sand) Deposits</b>	Glacial outwash sands and gravels with occasional silty sand and clayey sand deposits. Approximately 15 – 60 feet thick at the Site.	Uplands: 1 – 2 Site: 1 – 6 Seekonk River: 4 – 6
<b>Silt</b>	Very loose, clayey silt. Contains sand and organics. Discontinuous, approximately 2 – 10 feet thick at the Site.	Uplands: N/A Site: 2 – 4 Seekonk River: N/A
<b>Glacial Till</b>	Silt, sand, gravel and clay. Approximately 5 – 10 feet thick at the Site.	Uplands: 1 – 2 Site: 4 – 7 Seekonk River: 5 – 7
<b>Bedrock</b>	Rhode Island Formation – gray to black, fine to coarse-grained quartz arenite, shale and conglomerate (USGS, 1971).	Uplands: 2 – 8 Site: 1 – 8 (outcrop in central FGPA) Seekonk River: 7 and 8

#### HYDRAULIC CONDUCTIVITY

Hydraulic conductivity (K) testing (rising/falling head slug tests) was performed at eight monitoring wells to characterize the hydrogeological properties of fill, glacial outwash, and glacial till. At each well, the initial static water level and depth to the bottom of the well were measured. A vented pressure transducer was set to record the groundwater level data on a 1-second interval and then lowered within the well to approximately one foot from the bottom of the well. Once the water level in the monitoring well stabilized to the measured pre-test static water level, a slug (i.e., solid object used to displace water) was lowered into the well until it was fully submerged, rapidly increasing the water level within the well. The transducer monitored the water level within the well as it lowered back to near-static levels (i.e., falling head test). The slug was subsequently removed from the well, causing the water level to rapidly decrease within the well. The transducer then monitored the water level within the well as it rose back to near-static levels (i.e., rising head test).

The hydraulic conductivity of the fill and native overburden soils was calculated using the Bouwer and Rice slug test solution (Bouwer and Rice, 1976) for fully and partially penetrating wells using AQTESOLV, a software package used to analyze aquifer test data. Attached Table G-1 summarizes the hydraulic conductivity testing results, along with calculated geometric mean values for each unit. A comparison of the field-measured hydraulic conductivity values (along with published literature values) and the calibrated hydraulic conductivity values used in the numerical model is presented in the following section.

## MODEL CALIBRATION

The process of adjusting the model to match observed data is referred to as model calibration. GZA used an iterative calibration process during which the hydraulic properties of the aquifer materials and the boundary conditions are varied within ranges constrained by Site-specific and published data. The numerical hydraulic head results were compared to field-measured monitoring well groundwater elevations during the calibration process. As with any numerical model, conditions simulated in this model represent one set of conditions that generally match the observed Site conditions, but do not necessarily provide a unique solution. Furthermore, numerical models and the resulting simulations of groundwater flow are dependent in part on the scale of the geologic features modeled, amount of data collected, and solution methods used. These limitations were addressed in our calibration process to the extent practical. It is noted that this model may be modified or recalibrated as additional field data is collected.

As stated previously, the numerical model represents median-tide conditions. As such, the model was calibrated to the average value of the hydraulic head data measured between 2011 and 2017 for the Site monitoring wells, as well as available groundwater elevation data for USGS monitoring wells within the model domain. Observation points used for model calibration included sixty-five (65) overburden monitoring wells at the Site and five (5) USGS monitoring wells. Refer to Figure G-1 for the locations of the observation points. The screened interval for each monitoring well was imported into GMS to calculate the simulated hydraulic head at each location. A calibration plot, which directly compares simulated hydraulic heads vs. field measured hydraulic heads and thus illustrates the overall accuracy of the numerical model, is shown below. Calculated hydraulic head contours within each of these units are presented on Figure G-6.

The tight grouping around the match line (red, 1 to 1 line) and a residual mean near zero both indicate that the calibrated model does not provide an overall bias (high or low) to the Site averaged and USGS hydraulic head data. Furthermore, the statistical results (correlation coefficient, RMS error, normalized RMS, absolute residual mean) demonstrate the accuracy of the calibrated model. In fact, a normalized RMS error of 10% or less is generally accepted as a well calibrated model. The normalized RMS error for this calibrated model is 1.5%, which is well within the generally accepted range.

The calibrated hydraulic properties assigned to the modeled hydrogeologic units based on the Site data and literature values are summarized in the following table.

Hydrogeologic Unit	Field Parameter	Modeled Parameter	
	Horizontal Hydraulic Conductivity (Kh) (ft/day)	Kh (ft/day)	Vertical Hydraulic Conductivity (Kv) (ft/day)
Surface Water	N/A	500	500
Fill	1 – 6 (1)	2	0.2
River Soft Sediments	10 <sup>-5</sup> – 10 (2)	0.7	0.07
Glacial Outwash Deposits (Sand)	7 – 38 (1)	15 – 25	1.5 – 5
Silt	10 <sup>-5</sup> – 0.3 (2)	0.08 – 0.1	0.008 – 0.01
Glacial Till	10 <sup>-4</sup> – 10 (1, 2)	1.1	0.1
Bedrock	10 <sup>-5</sup> – 10 (2)	0.05 – 0.4	0.005 – 0.04

Notes

1. Source: In-situ hydraulic conductivity tests. Results presented in Table G-1.
2. Source: Literature values presented in Freeze and Cherry, 1979.

The hydraulic boundary conditions assigned to the calibrated model are summarized in the following table.

Boundary Condition	Parameters, Values and Rationale
Constant Head	Stage (ft; NAVD 88) – the stage of the Seekonk River (equivalent freshwater head) was set to 0.1 feet (median tide).
Aerial Recharge	<p>Recharge rates – the following recharge rates were assigned according to the current ground cover within the model domain:</p> <ul style="list-style-type: none"> <li>• Large Building: 0 inches/year</li> <li>• Previously Capped Area: 2 inches/year</li> <li>• Residential/Commercial: 5 inches/year</li> <li>• Urban (Undeveloped): 9 inches/year</li> <li>• Outwash Deposits (Undeveloped): 15 – 22 inches/year</li> <li>• Athletic Fields/Parkland: 30 inches/year</li> </ul> <p>Rationale –The modeled recharge rates are consistent with published values based on research conducted in the region (USGS, 1991; USGS, 1997; and USGS, 2006).</p>
Drain boundaries (24" conc. pipes, north and south of substation)	<p>Elevation (ft; NAVD 88): -1.2 to 2.3  Conductance (ft<sup>2</sup>/day/ft): 0.4 to 0.6</p> <p>Rationale – the invert elevations of the drains were surveyed at the outfall locations along the Seekonk River (south of substation: -1.21 feet; north of substation: 0.04 feet). The slope of the drains within the model are consistent with literature values (0.5 – 1.0%). The modeled groundwater contours and simulated hydraulic heads are consistent with field data. Approximately 3 gpm discharges into these three drains within the model.</p>
Horizontal Flow Barrier (Existing Bulkheads)	<p>Hydraulic Conductivity at Site (ft/day) – 0.3 to 5 (2 * 10<sup>-3</sup> to 10<sup>-4</sup> cm/sec)  Thickness (feet) – 1</p>

Boundary Condition	Parameters, Values and Rationale
	Rationale – The modeled hydraulic conductivities reflect the actual bulkhead construction/conditions in the field and are consistent with published values (Starr et al., 1992; Freeze and Cherry, 1979).

Based on the numerical model results presented above, the calibrated steady state simulation provides a reasonable match to the observed groundwater elevation data at the Site. Consequently, the proposed remedial activities at the Site (e.g., containment wall installation, impermeable cap placement) were subsequently simulated to evaluate the effect on the local groundwater flow conditions, as discussed further below.

#### STEADY STATE MODEL RESULTS (MEDIAN TIDE CONDITIONS)

The simulated shallow groundwater flow patterns in the overburden deposits within: 1) the model domain; and 2) the vicinity of the Former Tidewater Facility are presented on Figure G-6. Consistent with the field-measured hydraulic heads, groundwater generally flows towards the east in the vicinity of the Site and eventually discharges into the Seekonk River. Similar to conditions measured in the field, the simulated groundwater elevations in the substation area are depressed, with approximately 3 gallons per minute of groundwater discharging into the two drain elements that simulate the deep drain installations, or associated bedding material. These conditions are also consistent with field measurements. As anticipated, an upward component to groundwater flow is simulated within the calibrated numerical model in the vicinity of Seekonk River (i.e., groundwater discharge area).

The hydraulic gradient is a measure of the change in hydraulic head over a specified distance (i.e., the slope of the groundwater table in the shallow overburden). In general, steeper hydraulic gradients are typically observed in aquifers containing soil with low hydraulic conductivities, and vice versa. As anticipated, a gently sloping horizontal hydraulic gradient of approximately 0.008 to 0.01 ft/ft is simulated in the fill unit in the southern portion of the Site. In the central portion of the FGPA, a steeper hydraulic gradient (approximately 0.03 to 0.05 ft/ft) is simulated due to the retaining walls and bedrock outcrop. As anticipated, the horizontal hydraulic gradient is also steeper (approximately 0.05 ft/ft) within the upper glacial till unit, near the western boundary of the model domain. These model results are in agreement with field-measured data and general hydrogeologic principles.

The calibrated model results are in overall agreement with the field-measured groundwater elevations at the Site, hydraulic properties, hydrogeologic conditions and published reports. Additionally, the groundwater flow patterns at the Site are generally consistent with conditions observed. Therefore, the calibrated model was deemed acceptable and was used to simulate bulkhead improvements at the Site to evaluate potential changes to groundwater flow conditions, as discussed in the following section.

#### FORECAST SIMULATION – POST-REMEDY (CONTAINMENT WALL AND IMPERMEABLE CAP INSTALLATION)

For the forecast numerical simulation, the following boundary conditions were revised to simulate the proposed post-remedy conditions:

- **Containment Wall:** the proposed containment wall was simulated with HFBs. The wall's alignment within the model domain is consistent with Drawing 10 of this report (as shown on Figure G-7). The modeled hydraulic conductivity of the proposed containment wall was assumed to be  $10^{-6}$  cm/sec (0.00283 feet/day), with an assumed wall thickness of 1 feet. As discussed previously, the bottom elevation of model layer 5 at the Site is -40 feet (NAVD 88), to simulate the tip elevation of the southern portion of the proposed containment wall.<sup>2</sup> Refer to the text of this report for additional information regarding the proposed containment wall.
- **Impermeable Cap:** the recharge boundary was updated to reflect the proposed impermeable cap area. Within this area, the modeled recharge rate was conservatively updated to 2 inches/year.
- **Deep drains:** the southern deep drain is anticipated to function similarly following the completion of the proposed remedy. Therefore, the corresponding drain element within the model remained unchanged for the forecast simulation. On the other hand, the northern deep drain will not penetrate the proposed containment wall and will be removed from service. Consequently, this drain element was deactivated within the forecast simulation.

The other boundary conditions (e.g., recharge, constant head) and hydraulic properties were not altered for the forecast simulation. Similar to the previously discussed steady state calibration model, median tide conditions were modeled for this numerical simulation.

The simulated shallow groundwater flow patterns at the Site for the post-remedy forecast simulation are presented on Figure G-7 (left side). In addition, the projected groundwater mounding for the post-remedy conditions are also presented on Figure G-7 (right side). These simulated shallow groundwater flow patterns are generally comparable to the calibrated, steady state model results which simulate current conditions at the Site (Figure G-6). This numerical simulation suggests that the proposed containment wall will create only a minor diversion to localized groundwater flow at the Site. In fact, the area where the projected groundwater mounding is greater than 0.5 feet only extends approximately 150 feet to the west of the proposed containment wall. The maximum projected mounding directly behind the proposed containment wall is approximately 1.3 feet.

Similar to the calibrated, steady state model, the hydraulic gradient in the southern portion of the Site ranged between approximately 0.008 and 0.01 for this simulation. The hydraulic gradient in the central portion of the FGPA was also similar between the calibrated model results and the post-remedy forecast simulation results. Overall, the consistency in the macro groundwater flow patterns, the limited mounding and the similar hydraulic gradients across the Site, suggest that that proposed containment wall will only create a minor diversion to localized groundwater flow at the Site.

---

<sup>2</sup> Note that the tip elevation in the northern portion of the containment wall, where shallower glacial till was encountered during field investigation activities, is approximately -32 feet. The simulated tip elevation in this portion of the Site is conservatively modeled at -40 feet elevation. Therefore the projected modeled mounding will be conservative (high) for the forecast simulation.

## **APPENDIX H**

**AIR POLLUTION CONTROL REGULATION NO.9 EVALUATION**

## APPENDIX H POTENTIAL VOLATILE EMISSIONS EVALUATION

GZA GeoEnvironmental, Inc. (GZA) performed an evaluation of predicted potential volatile emissions during implementation of the Rhode Island Department of Environmental Management (RIDEM) approved remedy at the Former Tidewater Facility Property in Pawtucket, Rhode Island (the Site). As described in this Remedial Action Workplan (RAWP), remedial activities include excavation and off-Site disposal of certain limited source area materials; installation of permeable and impermeable engineered caps; installation of a containment wall; recovery and off-Site disposal of identified non-aqueous phase liquids (NAPLs) impacts to the extent practical; natural attenuation groundwater monitoring; and placement of an Environmental Land Usage Restriction on the property records for the Site. The primary elements of the remedy requiring excavation and management of impacted materials include:

- Engineered Cap Installation which includes excavation and off-Site disposal of the area of crystallized naphthalene in the North Fill Area (earthwork);
- Containment Wall Installation (earthwork);
- Underground Tank (UGGT-1)/Raceway Vault Removal (product/residual material removal and earthwork); and
- Raceway Piping Removal (product/residual material removal and earthwork).

This evaluation of potential volatile emissions included a determination related to the applicability of the RIDEM Air Pollution Control Permits (APC) (Regulation No. 9) to these remedial construction activities. Consistent with previous discussions with RIDEM, the applicability of Regulation No. 9 was evaluated based on potential volatile emissions calculations/modeling performed in general accordance with published United States Environmental Protection Agency (EPA) guidance. This emissions modeling was developed for the specific remedial activities to be performed during this effort.

The following sections describe the emissions modeling performed for the remedial earthwork activities and the removal of the product/residual materials described above.

**As described further herein and in the attached, the results of this modeling indicate that implementation of the remedy does not have the potential to increase emissions by greater than the minimum quantities specified in Appendix A of RIDEM APC Regulation No. 9, and, therefore, a minor source permit is not required for the implementation of this remedy.**

### SOIL EXCAVATION (EARTHWORK) EMISSIONS

The earthwork emissions estimation is a two-step process. Initially, a conservative estimate of potential emissions was calculated for each earthwork activity and used to evaluate the applicability of Regulation No. 9. If the results indicate an emission potential

above the minimum quantities presented in Regulation No. 9, the results were further evaluated using predictive modeling consistent with EPA guidance.

The emissions potential of a particular analyte was calculated by conservatively assuming all of the mass of the analyte volatilizes during the associated earthwork activity. This represents the maximum amount of mass of the specific analyte in the volume of soil being excavated and managed based on the analyte concentration, soil volume disturbed, and typical bulk density.

Based on the results of the emission potential calculations for the earthwork activities, predicted emissions were calculated using modeling techniques. The predicted emissions modeling used the average concentration of detected analytes with estimated quantities. **Attachment H-1** describes these emission modeling calculations, which were based on the following EPA guidance document:

- Eklund, et al. 1997. Air Emissions from the Treatment of Soils Contaminated with Petroleum Fuels and Other Substances. Prepared for U.S. Environmental Protection Agency Office of Air and Radiation and Office of Research and Development Washington, D.C. EPA-600/R-97-116. October.

The following sections detail the potential and predicted model emissions for each remedial earthwork activity.

#### *Regrading Activities for Cap Installation*

As described in Section 11.0 of the RAWP, a new engineered cap will be installed across the majority of the Site with the exception of the wooded slopes along the western portions of the FPPA and SFA, three previously capped areas, and the substation area. Installation of the engineered cap will require significant re-grading of existing Site materials. We currently estimate the re-grading to achieve the subgrade elevations necessary for construction of the engineered cap will involve the management of approximately 22,500 cubic yards (CY) of excavated soil from across the Site. Note, this volume includes the excavation of the materials within the area of crystallized naphthalene identified in the North Fill Area. The following tables were prepared to estimate earthwork emissions from these regrading activities:

- **Table H-1A** Summary of Soil Analytical Results – Cap Installation
- **Table H-1B** Excavation Emissions Potential – Cap Installation
- **Table H-1C** Predicted Excavation Emissions – Cap Installation

## Potentials

To evaluate the excavation emissions potentials, GZA used data collected in the vicinity and depths associated with on-Site materials requiring management (excavation, transport, and backfill) to achieve the subgrade elevation for the engineered cap. The data used to perform this evaluation for these regrading activities consisted of 71 soil samples collected from across the Site at depths ranging from ground surface to 10 feet below ground surface (bgs) (**Table H-1A**). **Table H-1B** and the following present a summary of the total emissions potential (expressed in pounds) compared to RIDEM's Minimum Quantities (expressed in pounds/year) for cap installation activities.

Analyte	Average Measured Concentration in Soil (µg/g)	Maximum Measured Concentration in Soil (µg/g)	Total Excavation Emissions Potential using Average Measured Concentration (lb.)	Total Excavation Emissions Potential using Maximum Measured Concentration (lb.)	RIDEM Annual Minimum Quantity (lb.)
1,4-Dichlorobenzene	0.868	30	4.85E+01	1.65E+03	1.00E+01
2-Butanone (MEK)	22.093	750	1.23E+03	4.19E+04	4.00E+03
Acetone	22.129	750	1.24E+03	4.19E+04	2.00E+04
Benzene	0.766	30	4.28E+01	1.65E+03	1.00E+01
Bromomethane	1.512	60	8.45E+01	3.35E+03	7.00E+01
Carbon Disulfide	0.086	2.350	4.79E+00	1.31E+02	2.00E+03
Chloroform	0.751	30	4.20E+01	1.65E+03	2.00E+01
Ethylbenzene	7.533	140	4.21E+02	7.82E+03	9.00E+03
Isopropylbenzene	0.766	30	4.28E+01	1.65E+03	1.00E+03
m&p-Xylene	7.995	330	4.47E+02	1.84E+04	1.00E+03
MTBE	0.864	29.5	4.83E+01	1.65E+03	3.00E+03
Methylene Chloride	1.532	60	8.56E+01	3.35E+03	4.00E+02
Naphthalene	210.047	5,000	1.17E+04	2.79E+05	3.00E+00
o-Xylene	3.630	140	2.03E+02	7.82E+03	1.00E+03
Styrene	0.761	30	4.25E+01	1.65E+03	3.00E+03
Tetrachloroethene	0.763	30	4.26E+01	1.65E+03	2.00E+01
Toluene	1.231	30	6.88E+01	1.65E+03	3.00E+03
Trichlorofluoromethane	1.747	60	9.76E+01	3.35E+03	3.00E+03

**Note:**

Blue shading indicates calculated Total Excavation Emissions Potential exceeds RIDEM Annual Minimum Quantity defined in RIDEM APC No. 9.

GZA used both the average and maximum concentrations from the cap subgrade preparation data in order to calculate the total excavation emissions potential. This approach provides a very conservative evaluation because it assumes all the mass of the VOCs is emitted during the earthwork. As indicated (highlighted in blue) in the above summary of **Table H-1B**, 1,4-dichlorobenzene, 2-butanone, acetone, benzene,

bromomethane, chloroform, isopropylbenzene, m&p-xylene, methylene chloride, naphthalene, o-xylene, tetrachloroethene, and trichlorofluoromethane have an excavation emissions potential exceeding their respective RIDEM minimum quantity when the maximum concentration is used. 1,4-dichlorobenzene, benzene, bromomethane, chloroform, naphthalene and tetrachloroethene also have an excavation emissions potential exceeding its RIDEM minimum quantity when the average concentration is used.

### Estimated Emissions

Based on the results of the emissions potentials calculations described above, predicted emissions were calculated based on EPA consistent modeling. **Table H-1C** and the following summary provides the results of this modeling.

Analyte	Average Measured Concentration in Soil (µg/g)	Total Excavation Emissions (lb.)	RIDEM Annual Minimum Quantity (lb.)
1,4-Dichlorobenzene	0.868	3.96E-02	1.00E+01
2-Butanone (MEK)	22.093	7.37E+01	4.00E+03
Acetone	22.129	1.87E+02	2.00E+04
Benzene	0.766	2.27E+00	1.00E+01
Bromomethane	1.512	3.60E+01	7.00E+01
Carbon Disulfide	0.086	9.33E-01	2.00E+03
Chloroform	0.751	4.99E+00	2.00E+01
Ethylbenzene	7.533	2.62E+00	9.00E+03
Isopropylbenzene	0.766	1.26E-01	1.00E+03
m&p-Xylene	7.995	2.88E+00	1.00E+03
MTBE	0.864	5.07E-02	3.00E+03
Methylene Chloride	1.532	1.72E+01	4.00E+02
Naphthalene	210.047	1.80E-01	3.00E+00
o-Xylene	3.630	9.67E-01	1.00E+03
Styrene	0.761	2.01E-01	3.00E+03
Tetrachloroethene	0.763	5.06E-01	2.00E+01
Toluene	1.231	1.17E+00	3.00E+03
Trichlorofluoromethane	1.747	3.42E+01	3.00E+03

**Note:**

Red Highlighting indicates the Total Excavation Emissions exceeds RIDEM Annual Minimum Quantity defined in RIDEM APC No. 9.

The model uses the average concentration for each compound listed above, the estimated area of disturbance during the re-grading activities, an estimated average depth of re-grading, and an estimated time to complete the re-grading work to calculate the total estimated emissions for comparison to RIDEM’s Annual Minimum Quantities.

Based on these assumptions, no exceedances of RIDEM's Annual Minimum Quantities were noted. Refer to **Table H-1C**.

### *Containment Wall*

As described in Section 11.0 of the RAWP, an approximately 1,300 feet long containment wall will be installed along the eastern (downgradient) edge of the Site along the riverfront in the FPPA and portions of the FGPA and SFA. This wall will be a steel sheet pile wall and portions of the wall (approximately 580 feet) will be installed within the river to serve as a replacement for the existing deteriorated bulkheads. For the purpose of this evaluation, we have assumed that pre-excitation will be required for the upland portion of the containment wall (approximately 720-feet) and that the dimensions of the pre-excitation will be 3.5-feet wide to 20 feet below grade. Under this conservation assumption, construction of the containment wall will result in the generation of approximately 1,867 CY of impacted material.

The following tables were prepared to estimate earthwork emissions from the containment wall installation activities:

- **Table H-2A** Summary of Soil Analytical Results – Containment Wall
- **Table H-2B** Excavation Emissions Potential – Containment Wall
- **Table H-2C** Predicted Excavation Emissions – Containment Wall

### **Potentials**

To evaluate potential excavation emissions associated with the containment wall installation, GZA used data collected in the vicinity and at the depths of this proposed wall. The data used in the evaluation consisted of 15 soil samples as presented in **Table H-2A**. **Table H-2B** and the following present a summary of the total emissions potential (expressed in pounds) compared to RIDEM's Minimum Quantities (expressed in pounds/year) for containment wall installation activities on Site.

Analyte	Average Measured Concentration in Soil (µg/g)	Maximum Measured Concentration in Soil (µg/g)	Total Excavation Emissions Potential using Average Measured Concentration (lb.)	Total Excavation Emissions Potential using Maximum Measured Concentration (lb.)	RIDEM Annual Minimum Quantity (lb.)
1,4-Dichlorobenzene	1.543	12	1.29E+01	1.00E+02	1.00E+01
2-Butanone (MEK)	39.200	310	3.28E+02	2.59E+03	4.00E+03
Acetone	39.200	310	3.28E+02	2.59E+03	2.00E+04
Benzene	6.954	45	5.82E+01	3.77E+02	1.00E+01
Bromomethane	2.722	24	2.28E+01	2.01E+02	7.00E+01
Carbon Disulfide	0.051	0.130	4.23E-01	1.08E+00	2.00E+03
Chloroform	1.375	12	1.15E+01	1.00E+02	2.00E+01
Ethylbenzene	22.374	200	1.87E+02	1.67E+03	9.00E+03
Isopropylbenzene	1.376	12	1.15E+01	1.00E+02	1.00E+03
m&p-Xylene	19.936	100	1.67E+02	8.37E+02	1.00E+03
MTBE	1.543	12	1.29E+01	1.00E+02	3.00E+03
Methylene Chloride	2.763	24	2.31E+01	2.01E+02	4.00E+02
Naphthalene	3,240.31	37000	2.71E+04	3.10E+05	3.00E+00
o-Xylene	11.516	60.0	9.64E+01	5.02E+02	1.00E+03
Styrene	3.421	18.0	2.86E+01	1.51E+02	3.00E+03
Tetrachloroethene	1.375	12	1.15E+01	1.00E+02	2.00E+01
Toluene	8.409	41.5	7.04E+01	3.47E+02	3.00E+03
Trichlorofluoromethane	3.053	24	2.56E+01	2.01E+02	3.00E+03

**Note:**

Blue shading indicates calculated Total Excavation Emissions Potential exceeds RIDEM Annual Minimum Quantity defined in RIDEM APC No. 9.

Using both the average and maximum concentrations, GZA calculated total emissions potentials for all the detected VOCs with RIDEM minimum quantities. As indicated (highlighted in blue) in the above summary of **Table H-2C**, 1,4-dichlorobenzene, benzene, bromomethane, chloroform, naphthalene, and tetrachloroethene have an excavation emissions potential exceeding their respective RIDEM minimum quantity when the maximum concentration is used. 1,4-dichlorobenzene, benzene, and naphthalene also have an excavation emissions potential exceeding its RIDEM minimum quantity when the average concentration is used.

**Estimated Emissions**

Based on the results of the emissions potentials calculations described above, predicted emissions were calculated based on modeling. **Table H-2C** and the following summary provides the results of these calculations.

Analyte	Average Measured Concentration in Soil (µg/g)	Total Excavation Emissions (lb.)	RIDEM Annual Minimum Quantity (lb.)
1,4-Dichlorobenzene	1.543	1.63E-02	1.00E+01
2-Butanone (MEK)	39.200	3.03E+01	4.00E+03
Acetone	39.200	7.68E+01	2.00E+04
Benzene	6.954	4.78E+00	1.00E+01
Bromomethane	2.722	1.50E+01	7.00E+01
Carbon Disulfide	0.051	1.28E-01	2.00E+03
Chloroform	1.375	2.12E+00	2.00E+01
Ethylbenzene	22.374	1.80E+00	9.00E+03
Isopropylbenzene	1.376	5.23E-02	1.00E+03
m&p-Xylene	19.936	1.66E+00	1.00E+03
MTBE	1.543	2.62E+00	3.00E+03
Methylene Chloride	2.763	7.18E+00	4.00E+02
Naphthalene	3,240.311	6.43E-01	3.00E+00
o-Xylene	11.516	7.11E-01	1.00E+03
Styrene	3.421	2.10E-01	3.00E+03
Tetrachloroethene	1.375	2.12E-01	2.00E+01
Toluene	8.409	1.86E+00	3.00E+03
Trichlorofluoromethane	3.053	1.38E+01	3.00E+03

**Note:**

Red Highlighting indicates the Total Excavation Emissions exceeds RIDEM Annual Minimum Quantity defined in RIDEM APC No. 9.

The model uses the average concentration for each compound listed above, the estimated area of disturbance during the pre-excavation for the containment wall, an excavation depth of 20 feet, and an estimated duration for the pre-excavation work to calculate the total estimated emissions for comparison to RIDEM’s Annual Minimum Quantities. Based on these assumptions, no exceedances of RIDEM’s Annual Minimum Quantities were noted. Refer to **Table H-2C**.

**TANK/VAULTS PRODUCT REMOVAL EMISSIONS**

As described in Section 11.0 of the RAWP, remedial activities include the removal of product from three (3) structures/vaults located in the FPPA and FGPA to mitigate future human exposure and mitigate these materials from acting as an on-going source to groundwater.

The former underground storage tank (UGTT-1) is located in the center of the FGPA. The contents of UGTT-1 will be removed for off-Site disposal and the tank cleaned and removed. Based on previous investigations described in the January 2011 *SIDR*, GZA estimates the excavation will extend approximately 4 feet deep over an approximately 10

feet long by 10 feet wide area resulting in approximately 15 cy of impacted material for off-Site disposal. The contents of UGTT-1 were described to consist of a mix of water with heavy petroleum-like- “scum” on the surface. Approximately 2.5 feet of petroleum/fuel-oil-like impacted water was measured within UGTT-1. TPH fingerprinting indicated the presence of a weathered petroleum product in the boiling range of Fuel Oil No. 2/diesel.

The raceway located in the eastern portions of the FGPA and FPPA contains two (2) concrete vaults. The contents of these vaults will be removed for off-Site disposal, the vaults will be cleaned and backfilled in place. Based on previous investigations conducted in June 2010 and September 2017, the first vault is estimated to be approximately 9 feet deep over an approximately 7 feet long by 3.5 feet wide area and the second vault is estimated to be approximately 9 feet deep over an approximately 5 feet long by 5 feet wide area. During June 2010 and September 2017 investigations, contents of the concrete vaults were observed to consist of petroleum-like product. TPH fingerprinting of a nearby raceway pipe indicated the presence of a petroleum product in the boiling range of Fuel Oil No. 4. Note emissions modeled from removal of the raceway pipe are included below.

To evaluate the potential emissions from the removal of UGTT-1 and the two concrete structures/vaults, the contents were assumed to be fuel oil #2/diesel consistent with the fingerprint analysis from UGTT-1. Analytical results of the LNAPL sample collected from this well, as presented in **Table H-3A**, indicated concentrations of 1,2,4-trimethylbenzene and naphthalene.

Predicted emissions were calculated based on modeling. The predicted emissions modeling used the concentration of detected analytes from the LNAPL sample. **Attachment H-2** describes these emission modeling calculations, which were based on the following EPA guidance document (and the ideal gas law):

- Eklund, et al. 1997. Air Emissions from the Treatment of Soils Contaminated with Petroleum Fuels and Other Substances. Prepared for U.S. Environmental Protection Agency Office of Air and Radiation and Office of Research and Development Washington, D.C. EPA-600/R-97-116. October.

The following tables were prepared to estimate earthwork emissions from the removal of UGTT-1 and the 2 vaults:

- **Table H-3A** Summary of LNAPL Analytical Results – MW-210
- **Table H-3B** Predicted Excavation Emissions – Tank/Vaults

GZA modeled the emissions consistent with published EPA guidance to estimate the predicted emissions that would be generated from the activities associated with the removal of these structures. **Table H-3B** and the following summary provides the results of this model.

Analyte	Average Measured Concentration in NAPL (mg/kg)	Total Emissions from Tank and Vaults (lb.)	RIDEM Annual Minimum Quantity (lb.)
1,4-Dichlorobenzene	175	8.83E-05	1.00E+01
2-Butanone (MEK)	4500	1.27E-01	4.00E+03
Acetone	4500	2.91E-01	2.00E+04
Benzene	175	3.82E-03	1.00E+01

**Note:**

Red Highlighting indicates the Total Excavation Emissions exceeds RIDEM Annual Minimum Quantity defined in RIDEM APC No.9.

The model uses the average concentration for each compound listed above, the estimated area of disturbance during the removal of the tanks/structures and associated product, an excavation depth of 4 feet for UGTT and 9 feet for the concrete vaults, and an estimated duration for the work to calculate the total estimated emissions for comparison to RIDEM's Annual Minimum Quantities. Based on these assumptions, no exceedances of RIDEM's Annual Minimum Quantities were noted. Refer to **Table H-3B**.

## RACEWAY PIPING REMOVAL/CLEANING EMISSIONS

As described in Section 11.0 of the RAWP, there is an estimated 840 feet of cast iron raceway pipe and 218 feet of wooden raceway pipe located in the eastern portions of the FGPA and FPPA. This piping and the associated product within the piping will be removed to mitigate future human exposure and mitigate these materials from acting as an on-going source to groundwater.

When modelling the 840 feet of the cast iron raceway pipe of varying size and depth, conservative assumptions were made. The assumed diameter of the cast iron piping is 1.17 feet (largest observed diameter) and assumed depth is 1 foot (calculated weighted average) resulting in approximately 36 cy of impacted material for off-Site disposal. The 218 feet of wooden raceway pipe extends approximately 2 feet deep and is approximately 1.5 feet in diameter resulting in approximately 25 cy of impacted material for off-Site disposal. Similar to the raceway vaults previously discussed, the contents of the raceway piping consisted of a petroleum-like product. TPH fingerprinting of a sample from the raceway pipe indicated the presence of a petroleum product in the boiling range of Fuel Oil No. 4.

To evaluate the emissions from the removal of the raceway piping, the contents were assumed to be comparable to observed LNAPL from the same well, MW-210, as discussed in the previous section for removal of the concrete structures. As previously discussed, the characteristics of the chromatogram for the sample of LNAPL from MW-210 indicated the presence of a petroleum product in the boiling range of fuel oil #2/diesel. Analytical results of the LNAPL sample collected from this well, as presented in **Table H-3A**, indicated concentrations of 1,2,4-trimethylbenzene and naphthalene.

Predicted emissions were calculated based on modeling. The predicted emissions modeling used the concentration of detected analytes from the LNAPL sample. **Attachment H-3** describes these emission modeling calculations, which were based on the following EPA guidance document (and the ideal gas law):

- Eklund, et al. 1997. Air Emissions from the Treatment of Soils Contaminated with Petroleum Fuels and Other Substances. Prepared for U.S. Environmental Protection Agency Office of Air and Radiation and Office of Research and Development Washington, D.C. EPA-600/R-97-116. October.

The following tables were prepared to estimate earthwork emissions from the tank/vaults removal/cleaning activities:

- **Table H-3A** Summary of LNAPL Analytical Results – MW-210
- **Table H-3C** Predicted Excavation Emissions – Cast Iron Raceway Piping
- **Table H-3D** Predicted Excavation Emissions – Wooden Raceway Piping

GZA modeled the emissions consistent with published EPA guidance to estimate the predicted emissions that would be generated from the activities associated with the removal of this raceway piping. The following summary provides combines the results of the two raceway piping models.

Analyte	Average Measured Concentration in NAPL (mg/kg)	Total Emissions from Cast Iron Piping (lb.)	Total Emissions from Wooden Pipe (lb.)	Total Emissions from Raceway Piping (lb.)	RIDEM Annual Minimum Quantity (lb.)
1,4-Dichlorobenzene	175	9.43E-05	4.02E-05	1.34E-04	1.00E+01

Trichlorofluoromethane	345	4.70E-02	2.00E-02	6.70E-02	3.00E+03

**Note:**

Red Highlighting indicates the Total Excavation Emissions exceeds RIDEM Annual Minimum Quantity defined in RIDEM APC No.9.

The model uses the average concentration for each compound listed above, the estimated area of disturbance during the removal of the cast iron and wood piping and associated product, an excavation depth ranging from 0.5 to of 2 feet, and an estimated duration for the work to calculate the total estimated emissions for comparison to RIDEM’s Annual Minimum Quantities. Based on these assumptions, no exceedances of RIDEM’s Annual Minimum Quantities were noted. Refer to **Tables H-3C** and **H-3D**.

**TOTAL EMISSIONS**

The total predicted emissions associated with all of the anticipated Site remedial earthwork activities associated with installation of the engineered cap, installation of the containment wall, and the source area removals were calculated by summing predicted

emissions for each analyte. **Table H-4** and the following present a summary of the predicted total excavation emissions (expressed in pounds) compared to RIDEM's Minimum Quantities (expressed in pounds/year) published in Regulation No. 9, Appendix A. This list only includes those detected compounds for which there are minimum quantities available.

Analyte	Cap Installation Emissions (lb.)	Containment Wall Emissions (lb.)	Tank/Vault Emissions (lb.)	Cast Iron Raceway Piping Emissions (lb.)	Wooden Raceway Piping Emissions (lb.)	Total Excavation Emissions (lb.)	RIDEM Annual Minimum Quantity (lb.)
1,4-Dichlorobenzene	3.96E-02	1.63E-02	8.83E-05	9.43E-05	4.02E-05	5.62E-02	1.00E+01

Toluene	1.17E+00	1.86E+00	1.28E-03	1.36E-03	5.82E-04	3.03E+00	3.00E+03
Trichlorofluoromethane	3.42E+01	1.38E+01	4.40E-02	4.70E-02	2.00E-02	4.81E+01	3.00E+03

**Note:**

Red Highlighting indicates the Total Excavation Emissions exceeds RIDEM Annual Minimum Quantity defined in RIDEM APC No. 9.

**CONCLUSION**

**The results of this predictive modeling indicate that the earthwork activities do not have the potential to increase emissions by greater than the minimum quantities as specified in Appendix A of RIDEM APC Regulation No. 9, and, therefore, a minor source permit is not required for the construction of the Former Tidewater Facility remedy.**

**SOIL EXCAVATION EMISSIONS CALCULATIONS**

Former Tidewater Facility  
Pawtucket, Rhode Island

To estimate potential volatile emissions associated with the planned remedial soil excavations at the Former Tidewater Facility (“the Site”), GZA GeoEnvironmental, Inc. (GZA) used the following modified versions of the equations given in Appendix D of “Air Emissions from the Treatment of Soils Contaminated with Petroleum Fuels and Other Substances” (Eklund 1997):

First, the total excavation emissions potential is calculated as a benchmark:

*Total Excavation Emissions Potential:*

$$E_{Potential} = C_{i,Soil} \times S_v \times \beta$$

Where,

$E_{Potential}$  = Total Mass of Component i in a given volume of soil in grams (g);

$C_{i,Soil}$  = Concentration of Component i in the Soil in micrograms of Component i per gram of Soil (ug/g);

$\beta$  = Typical Bulk Density in grams per cubic centimeter (g/cm<sup>3</sup>) (assumed to be 1.5 g/cm<sup>3</sup> – Eklund 1997); and

$S_v$  = Total Volume of Soil Moved in cubic meters (m<sup>3</sup>).

*Average Total Emissions (detailed model):*

If the Average Total Emissions calculated by this detailed model (Eklund 1997) exceeds the calculated Total Excavation Emissions Potential, the Total Excavation Emissions Potential will be used.

$$E = E_{PS} + E_{DIFF}$$

$$E_{PS} = \frac{P_i MW 10^6 E_a S_v ExC}{R T}$$

$$E_{DIFF} = \frac{(C)(10,000)(SA)(t_v)}{\left(\frac{E_a}{K_{eq}k_g}\right) + \left(\frac{\pi t}{D_e K_{eq}}\right)^{1/2}}$$

Where,

$E$  = Total Emissions from Excavation of Soil in g;

$E_{PS}$  = Total Emissions due to Soil Pore Space Gas in g;

$E_{DIFF}$  = Total Emissions due to Diffusion in g;

$P_i$  = Partial Pressure of Component  $i$  in millimeters of mercury (mm Hg)<sup>1</sup>;

$MW$  = Molecular Weight in grams per mole (g/mol);

$10^6$  = Conversion Factor of  $\text{cm}^3/\text{m}^3$ ;

$E_a$  = Air-Filled Porosity (0.35 for wet, or compacted soil; 0.55 for dry, uncompacted soil – Eklund (1997));

$S_v$  = Total Volume of Soil Moved in  $\text{m}^3$ ;

$ExC$  = Soil-Gas to Atmosphere Exchange Constant (0.10 for wet or high-clay content soils; 0.33 for dry, sandy soils from Eklund - 1997);

$R$  = Universal Gas Constant in  $\text{mm-Hg}\cdot\text{cm}^3/\text{mol}/\text{K}$  (62,361  $\text{mm-Hg}\cdot\text{cm}^3/\text{mol}/\text{K}$ );

$T$  = Temperatures in K (assumed to be 15°C);

$C$  = Mass Loading of Component  $i$  in soil in  $\text{g}/\text{cm}^3$ ;

10,000 = Conversion Factor of square centimeters per square meter ( $\text{cm}^2/\text{m}^2$ ); and

$SA$  = Total Emitting Surface Area in square meters ( $\text{m}^2$ ). GZA assumed the Total Emitting Surface Area to be the sides and bottom of the excavation and the sides and top of the stockpile.

$D_e$  = Effective Diffusivity in Air in square centimeter per second ( $\text{cm}^2/\text{s}$ );

$K_{eq}$  = Equilibrium Coefficient;

$t_v$  = Time the Volume of Soil Moved is emitting in seconds (s) (360 s – Eklund (1997));

$k_g$  = Gas-Phase Mass Transfer Coefficient in centimeter per second (cm/s) (Default of 0.15 cm/s – Eklund (1997)); and

$t$  = Time that the Instantaneous Emission Rate approximates the Average Emission Rate over the 360 second period that Emissions from Freshly Excavated Soil are assumed to be Significant in s (60 s – Eklund (1997)).

$P_i$  is calculated by:

For this scenario, the partial pressure was estimated using Raoult's Law assuming the constituents are in a mixture with the other organic matter in the soil.

---

<sup>1</sup> Note that because the impacts at the Site are primarily not separate phase, we have used the partial pressure as opposed to the vapor pressure of the pure component.

*Raoult's Law:*

$$P_i = P_i^* x_i$$

Where,

$P_i$  = Partial Pressure of the Component i in the Mixture;

$P_i^*$  = Vapor Pressure of the pure Component i; and

$x_i$  = Mole Fraction of the Component i in the Mixture (moles component/total moles).

$$x_i = \frac{10^{-6} C_{i,Mixture} MW_{Mixture}}{MW_i}$$

Where,

$10^{-6}$  = Conversion Factor of kilogram per milligram (kg/mg);

$MW_{Mixture}$  = Molecular Weight of Mixture in g/mol (assumed to be 250 g/mol);

$MW_i$  = Molecular Weight of Component i in g/mol; and

$C_{i,Mixture}$  = Concentration of Component i in the Mixture in milligrams of Component i per kilogram of Mixture (mg/kg).

$$C_{i,Mixture} = \frac{C_{i,Soil}}{TOC}$$

Where,

$C_{i,Mixture}$  = Concentration of Component i in the Mixture in milligrams of Component i per kilogram of Mixture (mg/kg);

$C_{i,Soil}$  = Concentration of Component i in the Soil in micrograms of Component i per gram of Soil (ug/g); and

$TOC$  = Fraction of Total Organic Carbon in the Soil (g/g). Because Site-specific TOC data was not available, the default value of 0.002 from the USEPA's Soil Screening Guidance: User's Guide (1996) was used to be conservative.

We've assumed a soil temperature of 15°C in our calculations. We have therefore utilized the Clausius-Clapeyron equation to calculate vapor pressures at 15°C from those in the literature (typically 25°C):

*Clausius-Clapeyron Equation:*

$$\ln\left(\frac{P_1}{P_2}\right) = \left(\frac{\Delta H_{vap}}{R}\right)\left(\frac{1}{T_2} - \frac{1}{T_1}\right)$$

Where,

$P_1$  = Vapor Pressure at a Known Point;

$P_2$  = Vapor Pressure at a Given Point;

$T_1$  = Temperature at a Known Point in Kelvin (K);

$T_2$  = Temperature at a Given Point in K;

$\Delta H_{vap}$  = Enthalpy of Vaporization of Component i in kilojoules per mole (kJ/mol); and

$R$  = Universal Gas Constant in kilojoules per Kelvin per mole (8.314E-03 kJ/K/mol).

$C$  (Mass Loading of Component i in soil in g/cm<sup>3</sup>) is calculated by:

$$C = 10^{-6} C_{i,Soil} \beta$$

Where,

$10^{-6}$  = Conversion Factor of gram per microgram (g/ug);

$C_{i,Soil}$  = Concentration of Component i in the Soil in micrograms of Component i per gram of Soil (ug/g); and

$\beta$  = Typical Bulk Density in g/m<sup>3</sup>; (assumed to be 1.5 g/m<sup>3</sup> – Eklund (1997)).

$K_{eq}$  is calculated by:

$$K_{eq} = \frac{P_i MW_i E_a}{R T C}$$

Where,

$P_i$  = Partial Pressure of the Component i in the Mixture in mm Hg;

$MW_i$  = Molecular Weight of Component i in g/mol;

$E_a$  = Air-Filled Porosity (0.35 for wet, or compacted soil; 0.55 for dry, uncompacted soil – Eklund (1997));

$R$  = Universal Gas Constant in mm-Hg\*cm<sup>3</sup>/mol/K (62,361 mm-Hg\*cm<sup>3</sup>/mol/K);

$T$  = Temperatures in K (assumed to be 15°C);

$C$  = Mass Loading of Component i in soil in g/cm<sup>3</sup>;

$D_e$  is calculated by:

$$D_e = \frac{D_a (E_a)^{3.33}}{(E_T)^2}$$

Where,

$D_a$  = Diffusivity in Air of Component i in cm<sup>2</sup>/s (Default of 0.1 was used when chemical-specific values could not be found.);

$E_a$  = Air-Filled Porosity (0.35 for wet, or compacted soil; 0.55 for dry, uncompacted soil – Eklund (1997)); and

$E_T$  = Total Porosity (0.35 for compacted soil; 0.55 for uncompacted soil – Eklund (1997)).

For impacted soils to be managed on-Site (e.g., if it is not directly loaded into a truck but is first stockpiled), an additional Total Emissions due to Soil Pore Space Gas factor will be included in the Average Total Emissions to account for the additional emissions during soil handling and stockpiling. As a conservative measure, for losses during management of materials, GZA will utilize the Total Emissions due to Soil Pore Space Gas that was calculated above for losses during excavation. This is conservative since the concentrations in the re-handled soil will be lower than in the soil during excavation.

**ATTACHMENT H-2**  
**TANK / VAULT REMOVAL EMISSIONS CALCULATIONS**  
**(UNDERGROUND STORAGE TANK (UGTT-1) AND RACEWAY VAULTS)**

Former Tidewater Facility  
Pawtucket, Rhode Island

To estimate the emissions from the removal of UGTT-1 and the two raceway structures/vaults at the Former Tidewater Facility (“the Site”), GZA GeoEnvironmental, Inc. (GZA) assumed that the air in the structures was in equilibrium with the non-aqueous phase liquid (NAPL) in the structures and that all of the air would be released from the structures once removal began. GZA has assumed that UGTT-1 is 10 feet long by 10 feet wide by 4 feet deep. GZA also estimates that the first raceway vault is 7 feet long by 3.5 feet wide by 9 feet deep and that the second raceway vault is 5 feet long by 5 feet wide by 9 feet deep. GZA has assumed that tank and vaults are 90% full of NAPL. These emissions were calculated using the following equations:

Total Tank/Vault (TV) Emissions:

$$E = m_{i,TV\ Headspace} = C_{i,headspace} * V_{TV\ Headspace}$$

Where,

$E$  = Total mass emitted from the Tank/Vault in grams (g);

$V_{TV\ Headspace}$  = Volume of the Tank’s/Vault’s Headspace in cubic meters (m<sup>3</sup>) (assumed to be 10% of the structures’ volumes);

$m_{i,TV\ Headspace}$  = Amount of the Component i in the Tank’s/Vault’s Headspace in g;

$C_{i,headspace}$  = Concentration of Constituent i in Tank’s/Vault’s Headspace (g/m<sup>3</sup>)

Ideal Gas Law:

$$\frac{n}{V_{TV\ Headspace}} = \frac{P_i}{R T}$$

$$C_{i,headspace} = \frac{n}{V_{TV\ Headspace}} * MW_i = \frac{P_i}{R T} MW_i$$

Where,

$P_i$  = Partial Pressure of Component i in atmospheres (atm)<sup>1</sup>;

$n$  = Amount of the Component i in the Tank’s/Vault’s Headspace in moles (mol);

$MW_i$  = Molecular Weight of the Component i in grams per mole (g/mol);

---

<sup>1</sup> Note that because the impacts at the Site are generally not pure-phase, we have used the partial pressure as opposed to the vapor pressure of the pure component.

$T$  = Temperature of Mixture in Kelvin (K); and

$R$  = Universal Gas Constant in atmospheres cubic meters per Kelvin per mole (8.314E-03 atm\*m<sup>3</sup>/K/mol).

$P_i$  is calculated by:

For this scenario, the partial pressure was estimated using Raoult's Law using the constituent's concentration in NAPL.

Raoult's Law:

$$P_i = P_i^* x_i$$

Where,

$P_i$  = Partial Pressure of the Component i in the Mixture;

$P_i^*$  = Vapor Pressure of the pure Component i; and

$x_i$  = Mole Fraction of the Component i in the Mixture (moles component/total moles).

$$x_i = \frac{10^{-6} C_{i,Mixture} MW_{Mixture}}{MW_i}$$

Where,

$10^{-6}$  = Conversion Factor of kilogram per milligram (kg/mg);

$MW_{Mixture}$  = Molecular Weight of Mixture in g/mol (assumed to be 250 g/mol); and

$C_{i,Mixture}$  = Concentration of Component i in the Mixture in milligrams of Component i per kilogram of Mixture (mg/kg) (the average measured constituent concentrations in NAPL located in wells on-Site was used).

We've assumed a NAPL temperature of 15°C in our calculations. We have therefore utilized the Clausius-Clapeyron equation to calculate vapor pressures at 15°C from those in the literature (typically 25°C):

Clausius-Clapeyron Equation:

$$\ln\left(\frac{P_1}{P_2}\right) = \left(\frac{\Delta H_{vap}}{R}\right)\left(\frac{1}{T_2} - \frac{1}{T_1}\right)$$

Where,

$P_1$  = Vapor Pressure at a Known Point;

$P_2$  = Vapor Pressure at a Given Point;

$T_1$  = Temperature at a Known Point in Kelvin (K);

$T_2$  = Temperature at a Given Point in K;

$\Delta H_{vap}$  = Enthalpy of Vaporization of Component i in kilojoules per mole (kJ/mol); and  
 $R$  = Universal Gas Constant in kilojoules per Kelvin per mole (8.314E-03 kJ/K/mol).

**ATTACHMENT H-3  
RACEWAY REMOVAL EMISSIONS CALCULATIONS  
(PIPING SECTIONS)**

Former Tidewater Facility  
Pawtucket, Rhode Island

To estimate the emissions from the removal of the wooden and cast iron portions of the raceway at the Former Tidewater Facility (“the Site”), GZA GeoEnvironmental, Inc. (GZA) assumed that the air in the piping was in equilibrium with the non-aqueous phase liquid (NAPL) in the raceway and that all of the air would be released from the raceway once removal began. GZA has assumed that the raceway consists of approximately 840 linear feet (LF) of 14-inch diameter cast iron piping and 218 linear feet (LF) of 18-inch diameter wooden pipe. GZA has assumed that the raceway piping is 90% full of NAPL. All excavation to uncover the raceway piping is included in the site prep soil excavation emissions calculations. The raceway piping emissions were calculated using the following equations:

Total Raceway Emissions:

$$E = m_{i,Raceway\ Headspace} = C_{i,headspace} * V_{Raceway\ Headspace}$$

Where,

$E$  = Total mass emitted from the Raceway in grams (g);

$V_{Pipe\ Headspace}$  = Volume of the Raceways’s Headspace in cubic meters ( $m^3$ ) (assumed to be 10% of 14-inch diameter cast iron pipe and 18-inch diameter wooden pipe);

$m_{i,Raceway\ Headspace}$  = Amount of the Component  $i$  in the Raceway’s Headspace in g;

$C_{i,headspace}$  = Concentration of Constituent  $i$  in Raceway’s Headspace ( $g/m^3$ )

Ideal Gas Law:

$$\frac{n}{V_{Raceway\ Headspace}} = \frac{P_i}{R T}$$

$$C_{i,headspace} = \frac{n}{V_{Raceway\ Headspace}} * MW_i = \frac{P_i}{R T} MW_i$$

Where,

$P_i$  = Partial Pressure of Component  $i$  in atmospheres (atm)<sup>1</sup>;

$n$  = Amount of the Component  $i$  in the Raceway’s Headspace in moles (mol);

---

<sup>1</sup> Note that because the impacts at the Site are not pure-phase, we have used the partial pressure as opposed to the vapor pressure of the pure component.

$MW_i$  = Molecular Weight of the Component i in grams per mole (g/mol);

$T$  = Temperature of Mixture in Kelvin (K); and

$R$  = Universal Gas Constant in atmospheres cubic meters per Kelvin per mole (8.314E-03 atm\*m<sup>3</sup>/K/mol).

$P_i$  is calculated by:

For this scenario, the partial pressure was estimated using Raoult's Law using the constituent's concentration in NAPL.

Raoult's Law:

$$P_i = P_i^* x_i$$

Where,

$P_i$  = Partial Pressure of the Component i in the Mixture;

$P_i^*$  = Vapor Pressure of the pure Component i; and

$x_i$  = Mole Fraction of the Component i in the Mixture (moles component/total moles).

$$x_i = \frac{10^{-6} C_{i,Mixture} MW_{Mixture}}{MW_i}$$

Where,

$10^{-6}$  = Conversion Factor of kilogram per milligram (kg/mg);

$MW_{Mixture}$  = Molecular Weight of Mixture in g/mol (assumed to be 250 g/mol); and

$C_{i,Mixture}$  = Concentration of Component i in the Mixture in milligrams of Component i per kilogram of Mixture (mg/kg) (the average measured constituent concentrations in NAPL located in wells on-Site was used).

We've assumed a NAPL temperature of 15°C in our calculations. We have therefore utilized the Clausius-Clapeyron equation to calculate vapor pressures at 15°C from those in the literature (typically 25°C):

Clausius-Clapeyron Equation:

$$\ln\left(\frac{P_1}{P_2}\right) = \left(\frac{\Delta H_{vap}}{R}\right)\left(\frac{1}{T_2} - \frac{1}{T_1}\right)$$

Where,

$P_1$  = Vapor Pressure at a Known Point;

$P_2$  = Vapor Pressure at a Given Point;

$T_1$  = Temperature at a Known Point in Kelvin (K);

$T_2$  = Temperature at a Given Point in K;

$\Delta H_{vap}$  = Enthalpy of Vaporization of Component i in kilojoules per mole (kJ/mol); and  
 $R$  = Universal Gas Constant in kilojoules per Kelvin per mole (8.314E-03 kJ/K/mol).

**Notes**

NE = Not Established

NA = Not Analyzed

ND = Not Detected (Detection Limit Unknown)

NFA = North Fill Area

FGPA = Former Gas Plant Area

FPPA = Former Power Plant Area

SFA = South Fill Area

Blue shading indicates compound was not detected - value shown is half the detection limit.

Red bolded and italicized text indicates the concentration exceeds the RIDEM Method 1 Industrial/Commercial Direct Exposure

Concentrations **bolded and underlined** exceed the RIDEM Method 1 GB Leachability Criteria.

A concentration with a bold border exceeds the Upper Concentration Limit.

Notes:

1. Total Excavation Emissions Potential based on Average Measured Concentration in Soil.
2. Total Excavation Emissions Potential based on Maximum Measured Concentration in Soil.
3. Only detected analytes with Rhode Island Department of Environmental Management (RIDEM) minimum quantity values are shown.
4. Naphthalene concentrations presented in this model are the maximum of naphthalene analyzed as a VOC or as a PAH
5. cm = centimeter; m = meter; g = gram; µg = microgram; ft = feet, lb = pound; kg = kilogram; cy = cubic yard.
6. Yellow Highlighting indicates model inputs.
7. Blue Highlighting indicates the calculated Total Excavation Emissions Potential exceeds the RIDEM Minimum Quantity.

Notes:

- The Partial Pressure was calculated using Raoult's Law.
- If the calculated Total Excavation Emissions exceeds the Total Excavation Emissions Potential, the Total Excavation Emissions Potential was used as the Total Excavation Emissions.
1. All constants for m&p-xylene are the average of the individual constants for m-xylene and p-xylene.
- Naphthalene concentrations presented in this model are the maximum of naphthalene analyzed as a VOC or as a PAH
- Only detected analytes with RIDEM minimum quantity values are shown with Total Excavation Emissions Potentials above RIDEM minimum quantities.
- Concentration units are in µg/g, which is equal to ppm.
- MW = molecular weight; atm = atmosphere; kJ = kilojoules; mol = moles; NAPL = non-aqueous phase liquid; ppm = parts per million; mm Hg = millimeter mercury; cm = centimeter; m = meter; g = gram; µg = microgram; ft = feet, lb = pound; s = second; yr = year; hr = hour; < = less than the reporting limit; TOC = total organic carbon.
- Yellow Highlighting indicates model inputs.
- Blue Highlighting indicates the calculated Excavation Emissions Rate exceeds the Total Excavation Emissions Rate Potential.
- Red Highlighting indicates the Total Excavation Emissions exceeds the Rhode Island Department of Environmental Management (RIDEM) Minimum Quantity.

**Notes**

NE = Not Established

NA = Not Analyzed

ND = Not Detected (Detection Limit Unknown)

NFA = North Fill Area

FGPA = Former Gas Plant Area

FPPA = Former Power Plant Area

SFA = South Fill Area

Blue shading indicates compound was not detected - value shown is half the detection limit.

Red bolded and italicized text indicates the concentration exceeds the RIDEM Method 1 Industrial/Commercial Direct

Concentrations **bolded and underlined** exceed the RIDEM Method 1 GB Leachability Criteria.

A concentration with a bold border exceeds the Upper Concentration Limit.

**Notes**

NE = Not Established

NA = Not Analyzed

ND = Not Detected (Detection Limit Unknown)

NFA = North Fill Area

FGPA = Former Gas Plant Area

FPPA = Former Power Plant Area

SFA = South Fill Area

Blue shading indicates compound was not detected - value shown is half the detection limit.

Red bolded and italicized text indicates the concentration exceeds the RIDEM Method 1 Industrial/Commercial Direct

Concentrations **bolded and underlined** exceed the RIDEM Method 1 GB Leachability Criteria.

A concentration with a bold border exceeds the Upper Concentration Limit.

Notes:

- The Partial Pressure was calculated using Raoult's Law.
- If the calculated Total Excavation Emissions exceeds the Total Excavation Emissions Potential, the Total Excavation Emissions Potential was used as the Total Excavation Emissions.
- All constants for m&p-xylene are the average of the individual constants for m-xylene and p-xylene.
- Naphthalene concentrations presented in this model are the maximum of naphthalene analyzed as a VOC or as a PAH
- Only detected analytes with RIDEM minimum quantity values are shown with Total Excavation Emissions Potentials above RIDEM minimum quantities.
- Concentration units are in µg/g, which is equal to ppm.
- MW = molecular weight; atm = atmosphere; kJ = kilojoules; mol = moles; NAPL = non-aqueous phase liquid; ppm = parts per million; mm Hg = millimeter mercury; cm = centimeter; m = meter; g = gram; µg = microgram; ft = feet, lb = pound; s = second; yr = year; hr = hour; < = less than the reporting limit; TOC = total organic carbon.
- Yellow Highlighting indicates model inputs.
- Red Highlighting indicates the Total Excavation Emissions exceeds the Rhode Island Department of Environmental Management (RIDEM) Minimum Quantity.

**Notes**

**Hydrocarbon Fingerprint:**

MW-210 LNAPL: The characteristics of the chromatogram indicates the presence of a petroleum product in the boiling range of fuel oil #2/diesel.

The phytane/ n-C18 ratio indicates that weathering has occurred.

Blue shading indicates compound was not detected - value shown is half the detection limit.

**Table H-3B**  
 Predicted Excavation Emissions - Tank/Vaults  
 Former Tidewater Facility  
 Pawtucket, RI

Assumptions	
Assumed Average MW of NAPL	250 (g/mol)
Assumed NAPL Temperature in Subsurface	15 (°C)
Assumed Tank % Filled with NAPL	90%
Assumed Volume of Concrete Storage Tank Headspace	1.11 (m <sup>3</sup> )
Assumed Volume of Concrete Vaults Headspace	1.24 (m <sup>3</sup> )
Assumed NAPL Temperature in Pipe	60 (°C)

Notes:

1. Only detected analytes with Total Excavation Emissions Potentials above RIDEM minimum quantity values are shown.
2. lb = pound; ND = Non-Detect.
3. Red Highlighting indicates the calculated Total Excavation Emissions Potential exceeds the RIDEM Minimum Quantity.

## **APPENDIX I**

### **CONTINGENCY PLAN/HEALTH AND SAFETY PLAN**

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

1. CLIENT/SITE/PROJECT INFORMATION		
Client: National Grid		
Site Address: Tidewater and Merry Streets, Pawtucket, Rhode Island		
Site Description, Work Environment: Former MGP and Power Generation Facility, Active Natural Gas Regulator and Electrical Switching and Substation Facility.		
Job/Project #: 05.0043654.00	Job Start Date: TBD	Job Finish Date: TBD
Site is Covered by the Following Regulations:	OSHA HAZWOPER Standard <input checked="" type="checkbox"/>	Mine Safety and Health Administration <input type="checkbox"/>
2. EMERGENCY INFORMATION		
Hospital Name & Address: Memorial Hospital 111 Brewster Street, Pawtucket RI		Hospital #: 401-729-2000
Directions and Street Map of Route to Nearest Hospital Attached: <input checked="" type="checkbox"/> Yes (required)		
Fire #: 911	Ambulance #: 911	Police #: 911
<b>WorkCare Incident Intervention Services:</b>	<b>For non-emergencies, if an employee becomes hurt or sick call 888-449-7787</b>	
Other Emergency Contact(s): David Rusczyk (GZA) Jesse Edmands (National Grid) National Grid Gas National Grid Electric Pawtucket Water Board	Phone #'s: 460-250-8556 (cell) 860-858-3110 (office) 781-434-8631 (cell) 781-907-3682 (office) 1-800-640-1595 1-800-465-1212 401-729-5005	
<u>Site-Specific Emergency Preparedness/Response Procedures/Concerns:</u>		
<p>This approximately 23-acre Site was the location of the former Tidewater Manufactured Gas Plant (MGP) and the Pawtucket No. 1 Power Station. The majority of the Site is currently vacant with the exception of an active natural gas regulating station, and active switching and electrical substations. Both are owned and operated by National Grid. The Site is listed with RIDEM as a result of historic impacts associated with the former MGP and power plant operations (RIDEM Case No. 95-022). RIDEM Method 1 soil exceedances are due to the presence of total petroleum hydrocarbons (TPH), polynuclear aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs), cyanide and certain inorganic compounds (primarily arsenic and lead) at the Site. In addition, exceedances of the Method 1 GB Groundwater Objective and Upper Concentration Limit (UCL) were noted in certain areas of the Site. Specifically, the presence of light and dense non-aqueous phase liquid (NAPL) was observed in several Site monitoring wells. Ethylbenzene, naphthalene and benzene were detected at concentrations above the GB Groundwater Objective in Site wells.</p> <p>The Site is wooded and has rough terrain proximate to riverfront. Extreme caution shall be exercised by all personnel on-Site, particularly in areas of rough and uneven terrain. Potential for exposure to poisonous plants, insects/ticks, snakes and wildlife. Caution is to be exercised, and the use of personal flotation device (PFD) while working along riverfront and over the water is mandatory. The proposed work area is throughout the Site property and within the adjacent Seekonk River. Significant utilities are present within certain areas of the Site, including overhead electric service, municipal water service, combined sewer overflow (CSO) lines and numerous underground natural gas lines.</p> <p>Potential emergencies on Site include physical injuries, heart failure, heat and cold stress. Personnel on Site will have current first aid and CPR training and will be able to respond to minor injuries while emergency response personnel are contacted for assistance. Workers will be provided with rest breaks, rest areas and water to prevent and/or minimize heat and cold stress conditions. A buddy system will be used to observe each other for signs and symptoms of heat stress or hypothermia and to administer appropriate first aid and call for help.</p>		

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

Before start of each day's work, a Site safety briefing will be conducted by the Field Safety Officer to ensure that all Site personnel are aware of the identity of the emergency coordinator on Site and that everyone is aware of the following:

- Location and proper use of fire extinguishers
- Evacuation procedures and gathering points
- Location of emergency names and numbers

The following minimum emergency equipment shall be kept and maintained on-Site:

- Industrial first aid kit
- Fire extinguishers (one per trailer/vehicle, heavy equipment)
- Absorbent material

Incidents, near miss "good catch", and unsafe act/condition events will be documented on the GZA People-Based Safety card or by using the PBS iPhone app. In addition, incidents and near misses will be documented using the NGRID Accident/Incident investigation report, as appropriate.

### Check cell phone signal strength upon arriving at Site.

- All EHS Events (incidents, first aid, near misses, unsafe acts/conditions, fires, chemical spills, property damage, extraordinary safe behaviors) must be reported immediately to the Project Manager, and within 24hours to the EHS Event Reporting Portal at [www.kelleronline.com/portal](http://www.kelleronline.com/portal). Username gempl1; Password 4Incidents&.
- In the event of a chemical release greater than 5 gallons, site personnel will evacuate the affected area and relocate to an upwind location. The GZA Field Safety Officer and client site representative shall be contacted immediately.
- Site work shall not be conducted during severe weather, including high winds and lightning. In the event of severe weather, stop work, lower any equipment (drill rigs), and evacuate the affected area.

### 3. SUB-SURFACE WORK, UNDERGROUND UTILITY LOCATION

Will subsurface explorations be conducted as part of this work?  Yes  No

Site property ownership where underground explorations will be conducted on:

Public Access Property  Yes  No  
 Private Property  Yes  No

Have Necessary Underground Utility Notifications for Subsurface Work Been Made?  Yes  Yet to be conducted

Specify Clearance Date & Time, Dig Safe Clearance I.D. #, And Other Relevant Information:

**IMPORTANT!** For subsurface work, prior to the initiation of ground penetrating activities, GZA personnel to assess whether the underground utility clearance (UUC) process has been completed in a manner that appears acceptable, based on participation/ confirmation by other responsible parties (utility companies, subcontractor, client, owner, etc.), for the following:

Electric:	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> NA	<input type="checkbox"/> Other _____
Fuel (gas, petroleum, steam):	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> NA	<input type="checkbox"/> Other _____
Communication:	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input checked="" type="checkbox"/> NA	<input type="checkbox"/> Other _____
Water:	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> NA	<input type="checkbox"/> Other _____
Sewer:	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> NA	<input type="checkbox"/> Other _____
Other: _____	<input type="checkbox"/> Yes	<input type="checkbox"/> No	<input type="checkbox"/> NA	<input type="checkbox"/> Other _____

Comments:

### 4. SCOPE OF WORK

Any OSHA PERMIT-REQUIRED CONFINED SPACE entry?

YES  NO

If yes, use Site Specific H&S Plan/Confined Space Entry Permit for that portion of the work

Any INDOOR fieldwork?  YES  NO

IF YES, EXPLAIN:

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

<p>General project description, and phase(s) or work to which this H&amp;S Plan applies.</p>	<p>The work associated with this HASP consists of implementation of a RIDEM approved Site remedy. The remedy includes installation of a containment wall, demolition/removal of certain Site features, installation of impermeable and permeable engineered caps, performance of source area excavations, and well installation and decommissioning activities. The work will be performed by a contractor engaged directly by National Grid and GZA will be performing construction management and field oversight services.</p> <p>Engineered Caps – The engineered caps consist of both permeable (a geotextile fabric underlying Installation of the engineered caps will require demolition and removal of certain Site features including concrete pads, concrete foundations, fencing, exposed bedrock outcrops, and retaining walls. Non-stained concrete generated during this work will be processed and re-used as fill on-Site. Installation of the engineered caps will also require significant re-grading of the topography of the Site. Approximately 22,000 cubic yards (CY) of material will be cut and re-used as on-Site fill and an additional approximately 11,000 CY of clean fill will also be imported to achieve the subgrade elevation for the engineered caps. An additional approximately 45,000 CY of clean fill will also be imported for the caps.</p> <p>Containment Wall – An approximately 1,300-foot long containment wall will be installed along the eastern (downgradient) edge of portions of the Site. Portions of this containment wall will be installed outboard of the existing bulkhead wall within the Seekonk River and will likely be installed from a barge. Demolition and preclearing of existing bulkhead wall structures (e.g. steel sheeting and timber piling) will also be required to install the containment wall within the Seekonk River. The containment wall will consist of steel sheet pile walls with sealed interlock joints driven or vibrated into the ground using a crane mounted hammer. Pre-excavation will be required to remove potential obstructions along the alignment of the upland portions of the containment wall. Portions of the containment wall will be installed proximate to active transmission towers and overhead electrical wires.</p> <p>Source Area Excavations – Three source area excavations will be performed. The first source area excavation is proximate to an underground tank. During this source area excavation, the overlying 4-inch thick concrete pad, the tank/structure, and the impacted soils immediately adjacent to this structure will be excavated and disposed off-Site. Prior to excavation, any observed liquids (groundwater and NAPL) will be removed from the tank/structure (if present) and the interior of the tank/structure cleaned to remove any residual sludges. The second source area excavation is associated with the presence of a wooden raceway, piping and two concrete structures/vaults used to transfer petroleum. The wooden portion of the raceway is approximately 218-feet long, 18-inches wide, 6-inches deep and was observed at depths ranging from 1 to 2 feet bgs. The raceway cast iron piping is estimated to cover an approximately 840 feet and ranged in size from 6 to 14-inches in diameter at depths ranging from approximately 1 to 2.5 feet bgs. The concrete structures/vaults associated with the raceway were also observed at two locations. These raceway components and associated liquids will be removed, collected, and disposed off-Site. The third source area excavation is associated with an area of crystallized naphthalene that covers an approximate 25-foot by 30-foot area to an average depth of approximately 3 feet. This excavation will result in the generation of approximately 84 CY of impacted material for off-Site disposal.</p> <p>Certain existing monitoring wells will be abandoned during the course of the work consistent with RIDEM regulations and new 4-inch diameter recovery wells will be installed upgradient of the containment wall.</p> <p>These remedial activities are anticipated to require approximately 18-months to complete.</p>
<p>Specific Tasks Performed by GZA:</p>	<p>Oversight of remedial activities for compliance with project specifications. These oversight activities include performance of perimeter air monitoring, performance of field density tests, and collection of confirmatory soil samples.</p>

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

Concurrent Tasks to be Performed by GZA-hired Subcontractors (List Subcontractors by Name): Refer to Individual Subcontractor HASPs for project specific tasks.	All contractors shall be contracted directly to National Grid. Contractors will be performing earthwork and demolition activities necessary to implement the RIDEM approved Site remedy.
Concurrent Tasks to be Performed by Others:	None anticipated.

<b>5. SITE-SPECIFIC OVERVIEW OF H&amp;S HAZARDS/MITIGATIONS (NOTE: Based on Hazard Assessment, Section 10)</b>	
Describe the major hazards expected to be present at the jobsite, and describe the safety measures to be implemented for worker protection. Use brief abstract statements or more detailed narrative as may be appropriate.	
<b>ON-SITE HAZARDS:</b>	<b>HAZARD MITIGATIONS:</b>
Active facility	Certain portions of the Site are active National Grid facilities (gas regulation, sub-station and power transmission). Personnel will use caution when around active heavy equipment and facilities. Keep in line of site of operators when in vicinity of equipment. Personnel will not enter active utility work zones unless authorized by NGRID.
Traffic/Pedestrians	Area needs to be appropriately marked off to inhibit pedestrians and vehicles traffic from entering the work zone. All personnel will wear reflective vests.
Slip, trip and fall scenarios.	Personnel need to use caution when moving around the Site to avoid hazards. Remove or mitigate slip/trip/fall hazards when feasible. Conduct reconnaissance of each drilling, test pit, and sampling location to identify hazards and proper mitigation prior to work.
Water Hazards	Be aware of uneven terrain, steep slopes, ground settlement, and poor bulkhead structural conditions while working near the Seekonk River. Coast Guard approved Personal Floatation Devices (PFDs) shall be worn at all times when working in and around the Seekonk River.
Construction related Hazards	Personnel will stay clear of moving heavy equipment at all times. GZA will ensure that operators of heavy equipment are aware of GZA position at all times. At a minimum, personal protective equipment (PPE) including hard hats, protective toed work boots, eye protection, and fluorescent colored reflective work vests shall be worn at all times. Nitrile inner gloves and driller's outer gloves, and hearing protection shall be worn at all times when working around the drill rig and test pits or otherwise supporting the drilling and test pitting activities. It is also recommended that Tyvek suits be worn to minimize contact with the impacted groundwater and soil during the work. Spotters will be utilized when heavy equipment movement and relocation is performed. Maintain eye contact with equipment operators when working near equipment.
Plant based Hazards	GZA will wear proper PPE and, if warranted, use poison ivy wipes to limit exposure. See attached Poison Ivy Prevention Plan.
Biting/Stinging Insects, Spiders, Lyme Disease	<p>Ticks carry Lyme (see attached Lyme Disease Prevention Plan) and other Diseases. Ticks are active above 40 degrees F. Tuck pants into long socks and apply DEET (or permethrin clothing pre-treatment is preferred) to control exposure to ticks. Check clothing for ticks frequently and use a tape-based lint roller to remove ticks that may be crawling on clothing. Check whole body immediately upon returning from field and shower.</p> <p>Be aware of intermittent seasonal reports of mosquito borne diseases, such as West Nile disease and Eastern Equine Encephalitis (EEE), and their locations relative to your field site. Use DEET or other mosquito repellent.</p> <p>Be aware of potential cavity, suspended or ground nesting bee/wasp/hornet nests. Avoid undue disturbance or approach with appropriate safety clothing protection and netting.</p>
Possible exposure to impacted soil and groundwater: TPH, VOCs, PAHs, and metals	GZA will wear proper PPE (Vinyl gloves, steel toe boots with rubber booties as necessary, and safety glasses) to further limit any exposure.

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

Possible exposure to NAPLs	GZA will wear proper PPE (Vinyl gloves, steel toe boots with rubber booties as necessary, and safety glasses) to further limit any exposure.
Natural gas hazards	GZA will use caution when near the natural gas facility. GZA will follow direction of National Grid gas personnel.
Electrical Hazards	GZA will use caution when near the active transmission tower area. GZA will follow direction of the safety observer provided by contractor. GZA will be utilizing small generator powered electric tools for concrete sampling. GFCI protection will be utilized when operating electrically powered tools. Extention cords and equipment will be inspected for wear and tear on a daily basis; equipment will be repaired/replaced as necessary.
Other Utility Hazards (material handling)	GZA will use caution when near the various utility operations on Site. GZA will follow direction of National Grid personnel.
THA 6.02 – Pile and Sheet Pile Installations	See THA 6.02
THA 6.07 – Troxler Testing	Proper storage and transport. Use proper PPE and lifting techniques. Beware of heavy equip. activity.
THA 4.4A – Excavation/Trenching (Heavy Equip.)	Wear proper PPE (high visibility vests or shirts), hardhats, steel toed boots, hearing protection, etc. Observe exclusion controls. Beware of utilities. Make sure operators know where you are at all times.
THA 17.1 – Construction Oversight	See THA 17.01
Additional hazard and mitigations are attached and identified in the attached JHAs.	

### 6. HEALTH AND SAFETY EQUIPMENT AND CONTROLS

#### AIR MONITORING INSTRUMENTS

- PID Type: MiniRAE 3000 Lamp Energy: 10.6 eV; ppbRAE 3000 Lamp Energy: 10.6 eV
- FID Type:
- Carbon Monoxide Meter
- Hydrogen Sulfide Meter
- O<sub>2</sub>/LEL Meter
- Particulate (Dust) Dustrak Meter
- Calibration Gas Type: 100 ppm Isobutylene, multi-gas cal.
- Others: Multi-RAE 5-Gas Meter (includes HCN)

Note: Ensure instruments have been properly calibrated

#### OTHER H&S EQUIPMENT & GEAR

- Fire Extinguisher : 10lb ABC Extinguisher
- Caution Tape
- Traffic Cones or Stanchions
- Warning Signs or Placards
- Decon Buckets, Brushes, etc.
- Portable Ground Fault Interrupter (GFI)
- Lockout/Tagout Equipment
- Ventilation Equipment
- Others:

#### PERSONAL PROTECTIVE EQUIPMENT

- Respirator Type:
- Resp-Cartridge Type:
- Hardhat
- Outer Gloves Type: (as needed, protective work gloves)
- Inner Gloves Type: Nitrile gloves
- Steel-toed boots/shoes
- Coveralls Type:
- Outer Boots Type:
- Eye Protection with side shields
- Face Shield
- Traffic Vest
- Personal Flotation Device (PFD)
- Fire Retardant Clothing: As needed (coveralls)
- EH (Electrical Hazard) Rated Boots, Gloves, etc.
- Noise/Hearing Protection
- Others:

**Discuss/Clarify, as Appropriate:**

### 7. AIR MONITORING ACTION LEVELS

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

Is air monitoring to be performed for this project? Yes  No

Make sure air monitoring instruments are in working order and have been calibrated prior to use. Depending on project-specific requirements, periodic field calibration checks may be necessary during the day of instrument use.

**ACTION LEVELS FOR OXYGEN DEFICIENCY AND EXPLOSIVE ATMOSPHERIC HAZARDS** (Action levels apply to occupied work space in general work area)

Applicable, See Below.  Not Applicable

Parameter	Response Actions for Elevated Airborne Hazards
Oxygen	<p><b>At 19.5% or below</b> – Exit area, provide adequate ventilation, or proceed to Level B, or discontinue activities</p> <p>Verify presence of adequate oxygen (approx. 12% or more) before taking readings with LEL meter.</p> <p>Note: If oxygen levels are below 12%, LEL meter readings are not valid.</p>
LEL	<p><b>Less than 10% LEL</b> – Continue working, continue to monitor LEL levels</p> <p><b>Greater than or Equal to 10% LEL</b> – Discontinue work operations and immediately withdraw from area. Resume work activities ONLY after LEL readings have been reduced to less than 10% through passive dissipation, or through active vapor control measures.</p>

**ACTION LEVELS FOR INHALATION OF TOXIC/HAZARDOUS SUBSTANCES** (Action levels are for sustained breathing zone concentrations)

Applicable, See Below.  Not Applicable

Air Quality Parameters (Check all that apply)	Remain in Level D or Modified D	Response Actions for Elevated Airborne Hazards
<input checked="" type="checkbox"/> VOCs	0 to 1 ppm	<p>1 ppm to 10 ppm: Temporarily halt work activities (5 minutes minimum) and continue to monitor levels.</p> <p>Persistently &gt; 10 ppm: halt work activities, ID source of vapors, complete corrective action to mitigate vapor emissions, continue to monitor levels, resume work if levels drop below 10 ppm. If levels persist, upgrade to level C. If sustained (1-5 minute duration) breathing zone readings register 1 ppm or greater, benzene Draeger tubes (or equivalent) will be utilized to measure benzene levels.</p>
<input type="checkbox"/> Carbon Monoxide	0 to 35 ppm	At greater than 35 ppm, exit area, provide adequate ventilation, proceed to Level B, or discontinue activities.
<input type="checkbox"/> Hydrogen Sulfide	0 to 10 ppm	At greater than 10 ppm, exit area, provide adequate ventilation, proceed to Level B, or discontinue activities
<input checked="" type="checkbox"/> Dust	0 to 1 mg/m <sup>3</sup>	PM <sub>10</sub> reading of 1 mg/m <sup>3</sup> (1,000 µg/m <sup>3</sup> ) over a 24 hour period or in the event of visible dust, implement dust control measures (i.e. water).
<input checked="" type="checkbox"/> Hydrogen Cyanide	< 2 ppm	<p>&lt; 2 ppm: Pull a dragger tube to confirm concentration level is less than 2 ppm. Continue to work and monitor if concentration is less than 2 ppm.</p> <p>&gt; 2 ppm: Stop work and move at least 25 feet upwind. Continue to monitor and only resume work if concentrations are less than 1 ppm.</p>

**SPECIAL INSTRUCTIONS/COMMENTS REGARDING AIR MONITORING:**

**IN ADDITION TO THESE WORK ZONE ACTION LEVELS, SEPARATE ACTION LEVELS HAVE BEEN ESTABLISHED FOR THE SITE PERIMETER.**

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

### 8. H&S TRAINING/QUALIFICATIONS FOR FIELD PERSONNEL

- |  |  |
|--|--|

### 9. PROJECT PERSONNEL - ROLES AND RESPONSIBILITIES

#### GZA ON-SITE PERSONNEL:

Name(s)	Project Title/Assigned Role	Telephone Numbers
Sean Connolly	Site Supervisor	Work: 860-858-3127 Cell: 860-508-7273
Sean Connolly	Field Safety Officer	Work: 860-858-3127 Cell: 860-508-7273
Sean Connolly	First Aid Personnel	Work: 860-858-3127 Cell: 860-508-7273
Sarah McLeod	GZA Project Team Members	Cell: 401-302-5747
Erik Beloff	GZA Project Team Members	Cell: 401-230-3747

**Site Supervisors and Project Managers (SS/PM):** Responsibility for compliance with GZA Health and Safety programs, policies, procedures and applicable laws and regulations is shared by all GZA management and supervisory personnel. This includes the need for effective oversight and supervision of project staff necessary to control the Health and Safety aspects of GZA on-site activities.

**Site Safety Officer (SSO):** The SSO is responsible for implementation of the Site Specific Health and Safety Plan.

**First Aid Personnel:** At least one individual designated by GZA who has current training and certification in basic first aid and cardiopulmonary resuscitation (CPR) must be present during on-site activities involving multiple GZA personnel.

**GZA Project Team:** Follow instructions relayed by the HASP and GZA manager on-site.

#### OTHER PROJECT PERSONNEL:

Name	Project Title/Assigned Role	Telephone Numbers
James Clark	Associate/Principal-in-Charge	Work: 860-858-3134 Cell: 860-250-6344
David Rusczyk	Project Manager	Work: 860-858-3110 Cell: 460-250-8556
Mark Dalpe	Health and Safety Coordinator (HSC)	Work: 401-421-4140 Cell: 401-374-2305
Richard Ecord	GZA EHS Director	Work: 781-278-3809 Cell: 404-234-2834

**Principal-in-Charge:** Responsible of overall project oversight, including responsibility for Health and Safety.

**Project Manager:** Responsible for day-to-day project management, including Health and Safety.

**Health and Safety Coordinator:** General Health and Safety guidance and assistance.

**GZA EHS Director:** H & S technical and regulatory guidance, assistance regarding GZA H&S policies and procedures.

## GZA SITE-SPECIFIC HEALTH, SAFETY & ACCIDENT PREVENTION STANDARD-PLAN

### 10. HAZARD ASSESSMENT (CHECK ALL THAT APPLY)

#### A. GENERAL FIELDWORK HAZARDS

<input type="checkbox"/> Confined Space Entry (STOP – Use Confined Space Entry HASP) <input type="checkbox"/> Abandoned or vacant building/Enclosed Spaces <input checked="" type="checkbox"/> Significant Slip/Trip/Fall Hazards <input type="checkbox"/> Unsanitary/Infectious Hazards <input checked="" type="checkbox"/> Poisonous Plants <input checked="" type="checkbox"/> Biting/Stinging Insects <input checked="" type="checkbox"/> Feral Animal Hazards <input checked="" type="checkbox"/> Water/Wetlands Hazards <input type="checkbox"/> Remote Locations/Navigation/Orientation hazards <input type="checkbox"/> Heavy Traffic or Work Alongside a Roadway <input checked="" type="checkbox"/> Weather-Related Hazards <input type="checkbox"/> Motor vehicle operation Hazards <input checked="" type="checkbox"/> Heavy Equipment Hazards <input type="checkbox"/> Structural Hazards (i.e. unsafe floors/stairways/roof) <input type="checkbox"/> Demolition/Renovation <input type="checkbox"/> Presence of Pedestrians or the General Public	<input checked="" type="checkbox"/> Overhead Hazards (i.e. falling objects, overhead power lines) <input checked="" type="checkbox"/> Portable Hand Tools or Power Tools <input type="checkbox"/> Significant Ergonomic Hazards <input checked="" type="checkbox"/> Electrical Hazards (i.e. Equipment 120 Volts or Greater, Work Inside Electrical Panels, or Maintenance of Electrical Equipment) <input type="checkbox"/> Other Stored Energy Hazards (i.e. Equipment with High Pressure or Stored Chemicals) <input type="checkbox"/> Fire and/or Explosion Hazard <input checked="" type="checkbox"/> Elevated Noise Levels <input checked="" type="checkbox"/> Excavations/Test Pits <input type="checkbox"/> Explosives or Unexploded Ordinance/MEC <input checked="" type="checkbox"/> Long Distance or Overnight Travel (Employees may not drive and work in excess of 16 hours in one day without prior approval from project PIC) <input type="checkbox"/> Personal Security or High Crime Area Hazards <input type="checkbox"/> Working Alone <input type="checkbox"/> Ionizing Radiation or Non-Ionizing Radiation <input checked="" type="checkbox"/> Chemical/Exposure Hazards (See Part B for Details) <input type="checkbox"/> Other:

## **LYME DISEASE AND TICK EXPOSURE PREVENTION PLAN**

### **1.0 PREVENTING TICK BITES**

Black-legged ticks may be present at all times of the year, but after a significant thawing of snow in spring, they emerge ready to feed on animals and humans. This generally occurs when the temperatures are 40 degrees F or higher.

For all work outside the office, GZA requires that a Health and Safety Plan shall be prepared. This plan is site specific in nature, and especially during spring and summer it should include specific actions GZA will take to avoid tick bites. These actions could include any of the following:

1. **Know where to expect ticks.** They live in moist and humid environments, particularly in or near wooded or grassy areas. You may come into contact with ticks during outdoor activities, when walking through vegetation, or when around leaf litter or shrubs.
2. **Arrange for grassy areas to be mowed or treated when possible.** Walking through tall grass or working in areas with tall grass will likely expose you to ticks. At specific areas at fixed facilities or project sites, clients may be able to mow areas of tall grass prior to GZA's arrival at the project site. Clients may also be willing to treat areas, if asked. A single springtime application of acaricide can reduce the population of ticks that cause Lyme disease by 68-100%.
3. **Dress correctly for spotting ticks.** Long pants and a long-sleeved shirt should be worn, and pants should be tucked inside white socks. Wearing white socks will allow you to better see ticks if they are on you.
4. **Use a repellent with DEET (on skin or clothing) or permethrin (on clothing and gear).** Repellents containing 20% or more DEET (N, N-diethyl-m-toluamide) can be applied to the skin and protect you for several hours. DEET should be re-applied regularly, especially if you're sweating. Always read and follow product instructions. Products containing permethrin can be used to treat boots, clothes, and camping gear. Permethrin-treated products remain protective through several washings. Permethrin is the preferred and most effective insecticide in tick bite prevention.
5. **Take a hot shower immediately after being outdoors.** Taking a shower within two hours of coming indoors has been shown to reduce your risk of getting Lyme disease. Showering may help wash off unattached ticks and is a good opportunity to do a thorough tick check.

6. **Perform tick checks at least three times daily.** Check your body thoroughly for ticks at two times during the work shift and after being outdoors. Black-legged ticks are very small, so a hand-held or full-body mirror should be used to view all parts of your body. Take special care to check the following parts of your body:
  - a. Under the arms
  - b. In and around the ears
  - c. Inside the bellybutton
  - d. Back of the knees
  - e. In and around all head and body hair
  - f. Between your legs
  - g. Around your waist
7. **Place clothes in a dryer.** Placing clothes into a dryer on high heat for at least an hour effectively kills ticks.

## 2.0 WHAT TO DO IF YOU FIND AN ATTACHED TICK

Even if you take all the precautions listed in section 2 of this document, you may find a tick attached to your body. Taking certain actions can keep your chances of developing Lyme disease very small. These actions include:

1. **Remove the tick as soon as you find it.** Remove an attached tick with the tick removal tool supplied by GZA or with fine-tipped tweezers, as close to the skin as possible, and pulling it straight out. If you remove an attached tick within 24 hours, it is very unlikely that Lyme disease will be transferred to you from the tick.
2. **Save the tick.** If you are sure a tick has been attached for more than 24 hours, and are sure the tick is a black-legged tick, save the tick for potential testing.
3. **Call WorkCare's Incident Intervention service.** If a tick has been attached to your body for more than 24 hours, call WorkCare immediately after removing it. WorkCare has a specific medical protocol used for tick bites, and can advise you of first aid measures to take that are specific to ticks and Lyme disease. They will also be able to advise you if you need to save the tick.
4. **Be alert for fever or a rash.** Fever and a rash may be the first signs of a tick-borne illness. Incubation time prior to becoming symptomatic for some tick borne illnesses can be up to 10 days (ehrlichiosis and anaplasmosis). If you have been in areas where ticks are likely to be present, even if you do not find a tick attached to your body, call WorkCare to get additional medical advice.

## **POISON IVY PREVENTION PLAN**

### **1.0 TIPS**

- If you need help remember what is poison ivy and what is not, just remember this rhyme: "Leaves of three let it be; if it's hairy, it's a berry!"
- If you don't have any other soap available, trying washing off with dish soap (just as it cuts the grease off your dishes, it effectively cuts the urushiol oil off the skin).
- If there are trails wherever you happen to be going, stay on them. Normally, poison ivy has been cleared out from these areas, but of course there are no guarantees.
- During river paddling trips in the east, especially in the piedmont and coastal plain, poison ivy often covers large areas along the shoreline. If you need to get to shore, beat down a path through the poison ivy, then immediately return to the river and scrub off using river silt and rinse off in the river.
- If you are camping or otherwise unable to treat poison ivy with soap and water or various over the counter medications and you know you've been exposed, consult your field guide for a plant known as Jewel Weed. Jewel Weed prefers moist, alluvial areas and the juice from the broken stem of the plant is a folk remedy for poison ivy exposure. This, like most folk remedies, should be taken with a grain of salt and you should still seek proper treatment.
- If you touch poison ivy put deodorant stick on it right away if you aren't near water. This will prevent the oil from spreading anywhere else.
- A poison ivy reaction usually takes a day or two to appear, although it could take as little as a few hours or as much as 7-10 days. If you think you've been exposed to the plant, the sooner you wash your skin the better your chance of having little or no reaction.
- When in doubt, assume it's poison oak or ivy. It's better to be safe than sorry.
- Vinegar is another cleansing agent you might try after exposure to poison ivy (urushiol).

- These plants are quite common in North America: poison ivy and sumac are widespread in much of the eastern and central U.S. as well as parts of Canada, and poison oak is prevalent in California and other parts of the western U.S.
- While leaves of three leaflets are by far the most common arrangement, poison ivy leaves will occasionally display more or fewer leaflets.
- While some people experience a reaction to poison ivy the first time they have contact with it, it commonly requires several exposures to the plant before someone develops adverse effects. Thus, don't assume that you are immune to poison ivy just because you've never had problems with it before.
- If you have irritation due to exposure to one of these, use Listerine on the bad areas -- it dries it out immediately.
- Poison ivy can be an integral part of the natural environment, and deer and other animals eat or live in poison ivy. For these reasons, consider peacefully coexisting with poison ivy if you have it on your property.
- Poison ivy, poison oak, and poison sumac cannot be identified by their size. Young plants are obviously quite small, while larger ones can grow up trees 5 or 10 feet (1.5 or 3.0 m). The overall appearance of the plants can also be deceiving: they can appear either as a vine or as a shrub. Several woodland plants can be mistaken for poison ivy, poison oak, or poison sumac but when in doubt, avoid contact with a plant.

## 2.0 WARNINGS

- Mango is a close relative of Poison Ivy and contains trace amounts of urushiol. If you exhibit a very strong reaction to poison ivy you should also be careful when around mango trees or handling mangoes.
- It's important to first wash with rubbing alcohol or vinegar or at least rinse off with cool water before taking a hot shower with soap. Hot water opens pores and can speed the urushiol's entry into the skin. Rather than dissipating the oil, soap will only spread it around. Don't reenter poison ivy after you've washed with rubbing alcohol, however, as the alcohol dries your skin and removes its protective oils.

- Like any other allergic reaction, poison ivy reactions can get very serious. Contact your physician or request immediate medical assistance if you experience extreme symptoms.
- Follow the manufacturer's directions and heed product warnings when using any herbicide. These products may be harmful to humans and pets, as well as to garden plants.
- **Never burn poison ivy.** Burning can cause the oil to get into the air; from there, you can breathe it in or get it in your eyes. The smoke from burning poison ivy will cause the same reaction in your lungs that normally happens on the skin. Reactions to this kind of exposure can be far more serious than those resulting from topical contact; in fact breathing the smoke from burning poison ivy can cause death.

### **3.0 THINGS YOU'LL NEED**

- Long pants, long-sleeve shirts
- Socks and fully-enclosed shoes. Boots may be even better!
- Gloves (plastic over cotton)
- Barrier cream
- Rubbing alcohol
- Vinegar
- Soap and water - only AFTER cleansing with rubbing alcohol, vinegar, or commercial cleanser like Tecnu, or mineral spirits

## 4.0 STEPS

1. **Learn to identify poison ivy, poison oak, and poison sumac, and when you see them, avoid them at all costs.** All are woody vines or shrubs that grow independently or climb and trail up trees, fences, and other objects, and along the ground.

- **Poison Ivy:**
  - **Leaves.** Poison ivy has thin, often shiny, bright-green compound leaves. The edges of the leaves usually have large indentations at irregular intervals. The leaves occur in threes, with one leaf at the end of the stem, and two leaves opposite each other on the stem. Hence the saying, "leaves of three, leave it be." The young leaves may be orange, and in the fall the leaves turn red.
  - **Vine.** The stem is woody and in its native territory is the only native vine with aerial roots. Aerial roots are small roots that grow out of the stem and also help the vine to cling to a support. English Ivy also has aerial roots, but it is not a native plant, and its leaves are very different from those of poison ivy. The aerial roots are commonly seen on older plants growing up or over non-soil supports (stones, trees, fences, etc.). They are often reddish. The aerial roots make the main stem appear hairy, hence the saying, "hairy rope, don't be a dope."

- Flowers and berries. Depending on the time of year, the plant may have clusters of small, yellowish-green flowers (usually in June) or hard, greenish-white berries (fall). Deer and birds eat the berries, and excrete the seeds, causing new plants to sprout in new places.
- **Poison oak** grows primarily in dry areas and also has leaves of three leaflets, and while the leaves often resemble "true oak" leaves, they may take on other appearances as well. They are usually green in spring and summer, turning reddish in late summer and fall. The flowers and berries are white to yellowish-green, as in poison ivy (hence another saying, "berries white, poisonous sight").
- **Poison sumac** has leaves of 7-13 leaflets, produces a small, white or grey berry, and is found in boggy or riparian areas. *Hereafter, the article refers only to "poison ivy" for brevity, but the steps for poison oak and poison sumac are the same.*

**2. Wear long pants, long-sleeve shirts, socks, and fully-enclosed footwear when walking in poison-ivy infested areas.** Not only will covering your skin help protect you from poison ivy, but mosquitoes won't bother you as much either.

**3. Wear gloves when working where poison ivy may be present, such as when cutting down trees in the woods, mowing brush, etc.** It is recommended that you wear plastic gloves over cotton gloves because urushiol (the oil in poison ivy that is responsible for the allergic reaction) can eventually soak through cotton gloves. Not only is getting poison ivy on your hands a pain, it makes it very easy to spread to the rest of your body, so gloves are an important defense. Wearing pants and long sleeve shirts can give you more time before it has contact with your skin.

- Exercise caution not to touch your face or eyes (or other exposed skin) with hands or gloves that may have come in contact with poison ivy.

**4. Apply a barrier cream, such as Ivy Block or Stokoguard, if you know you have a good chance of exposure to poison ivy.** While no vaccine or medicine has been shown to prevent reactions to poison ivy, barrier creams containing bentoquatam seem to be effective in slowing the absorption of urushiol into the skin. Apply the cream as directed, usually about an hour before potential exposure, and thoroughly wash it off within four hours, reapplying as necessary.

**5. Watch out for poison ivy oil carried back on pets.** Even if you avoid poison ivy, your pets may not, particularly if you let them run free in the woods or in a large yard. The urushiol sticks to pets' fur but typically does not irritate them, so you won't be able to tell if they've gotten into it. Keep dogs on a leash and keep a watchful eye on all pets or farm animals when in poison ivy country. If you think there's a chance your pet may have been exposed, thoroughly wash it with a good pet shampoo. Wear plastic gloves, cover exposed skin with clothing, and wear safety goggles. Try to prevent your pet from shaking off on the first wash (this is harder than it sounds; hence the safety goggles). Wash and thoroughly rinse your pet with the shampoo and warm water three times in succession to make sure the urushiol is gone. Towel dry, and immediately launder the towel in the washing machine. Let your pet fully dry before touching it with bare skin.

**6. Be careful around streams or ponds.** If the plants are hanging into the water the oils can spread and you may be exposed without ever having seen the plant. This can be particularly serious if you swim or bathe in contaminated water.

**7. Beware latent resin.** Urushiol resin can remain active for a long time—years if kept dry—so handle potentially exposed objects with care. People commonly end up with a reaction from touching garden tools that have been left in the yard, fences from which poison ivy has recently been removed, and clothes that were exposed to urushiol but were put away before the wearer came in contact with the oil. Thoroughly wash or dispose of clothes, tools, or other objects which may have come into contact with poison ivy, and use the same caution touching dead poison ivy plants or plant parts as you would if they were alive. To wash objects, use hot, soapy water and let the clothing or object dry outside for several days.

**8. Control poison ivy manually.** Spraying poison ivy with products such as Roundup or Ortho Poison Ivy Killer is not an environmentally friendly choice, especially since such products will usually kill other nearby plants as well. If you wish to remove poison ivy by hand, make sure to dress appropriately, wear barrier cream, and follow all other necessary precautions. Manual removal can be tedious, because you must remove all parts of the plant—stems, leaves, and roots—or it may regrow.

**9. Dispose of poison ivy or exposed objects properly.** Check with your municipality to find out any local regulations on poison ivy disposal. In general, dispose of poison ivy or contaminated objects in biodegradable plastic garbage bags, and mark the bags to warn your garbage handlers. You may also bury the poison ivy remnants, a wiser choice, but be sure to bury them deep enough (at least 12 inches to be safe) to prevent regrowth.

**10. Wash exposed skin immediately.** It takes about 10-30 minutes after contact for urushiol to bind with skin, so fast cleaning may prevent a reaction. If you think your skin may have been exposed to poison ivy, clean the affected area with rubbing alcohol, and then wash it with cool water. Do this while outside, if possible, and when you are finished proceed immediately to take a hot shower using plenty of soap. Scrub under fingernails thoroughly to wash off any remaining resin.

- You can also use Tecnu Extreme or Zanfel cleanser if you know you have been exposed to poison ivy. They are both very effective at removing the urushiol, which is vital. Even if used at the first sign of itching or rash, they can reduce the effect and severity of the allergic reaction.
- See How to Treat Poison Ivy and Poison Oak for more details.

## Task 4.1

### DRILLING OBSERVATIONS, MONITORING WELL INSTALLATION OBSERVATIONS, SOIL SAMPLING

#### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		Wear steel toed boots, hardhat and side-shielding safety glasses/goggles.
	Falling objects, debris	Stand clear of stacked drill rods. If stack appears unstable inform driller.
	Noise	Wear appropriate hearing protection.
	Roadway/traffic hazards	Be alert at all times; never step outside traffic cones.
		Wear high visibility vests at all times.
		Be familiar with escape routes at each location.
		Follow project Traffic Control Plan. Be alert at all times and never step outside the traffic cones. Use a Police detail when necessary.
	Slips, trips and falls	Maintain clean and sanitary work area free of tripping/slipping hazards. All borings, excavations, or partially completed groundwater monitoring wells will be adequately covered and/or barricaded if left unattended for any period of time to prevent injury. Store any hand tools used for sampling in their proper storage location when not in use. Provide adequate space for each employee to work safely with sound footing. Do not perform work if adequate lighting is not available. Maintain an exit pathway away from the rig at all times.
	Cuts, bruises, shocks, lacerations, sprains and strains during tool use	When working with a driller, do not assist the drilling crew with their work. Use properly maintained tools; do not use damaged tools. Wear the proper Personal Protective Equipment based on the task being performed. Store and carry tools correctly. Use the correct tool for the job. Do not use electrical tools with damaged cords or other electrical components. Observe proper electrical safety practices. Do not use electrical tools in wet areas.

## Task 4.1

### DRILLING OBSERVATIONS, MONITORING WELL INSTALLATION OBSERVATIONS, SOIL SAMPLING

#### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		Coordinate activities with driller. Allow driller to open sampling equipment (i.e., split spoons, Geoprobe sleeves, etc.)
	Fire hazards	Be familiar with emergency procedures and where fire extinguishers are present on site.
		Inform GZA subcontractor if you observe improper storage of used rags and unsafe storage of flammable/combustible liquids brought on site.
		GZA and its subcontractors, suppliers and vendors shall not smoke in the work area in GZA project sites.
		Smoking can only be in designated smoking areas away from work areas and potential fire hazard locations.
		Confirm with driller that a fire extinguisher present with rig and will be available at all times and that inspection tag is not expired.
		If driller is welding or cutting on site confirm there are no flammables or combustible materials near the vicinity of welding machines or torches (such as debris, fuels, grass/weeds, etc.). Review Site requirements for obtaining "Hot Work Permit".
		Stand well clear of welding/cutting/burning areas.
		When drilling activities encounter the presence of gas or electric, the drill crew shall immediately curtail drilling activity, shut down the drill rig and contact the Project Manager.
	Exposure to Hazardous Substances/Chemicals	Become familiar with hazards associated with hazardous commercial products used in drilling (fuels, silica sand, grout, cement, bentonite, etc.). Review Safety Data Sheets (SDSs) for such products and participate in daily safety tailgate meetings.
	Do not handle drilling chemicals.	
	Wear appropriate personal protective equipment.	
	Review hazards of chemicals that may have been used or currently are being used on site.	
	Refer to the site specific HASP for chemical hazards and the necessary precautions required for sampling.

## Task 4.4A Excavation and Trenching (Heavy Equipment)

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
Review Related THA's – 21.1 – General Outdoor Field Work		
Pre-Planning	Overlooking hazards	Review and become familiar with the requirements of GZA Policy 03-3006, <i>Excavation Safety Policy and Procedures</i> .
Observation of Deployment of Traffic Protection Equipment and Mobilizing Equipment by contractor	Collisions, struck by injuries	Wear high visibility vest at all times when out of personal or GZA vehicle.
		Park personal or GZA vehicle in designated parking locations, or select off-road area that is firm, and without hazards. Directly inspect parking location on foot if necessary.
		If parking outside of a designated parking area, demarcate vehicle with traffic cones or equivalent.
		Use emergency flashers or other appropriate vehicle warning system as appropriate to local conditions when parking personal or GZA vehicle.
		Observe if police detail or other required traffic control system (if necessary) is in place.
		Stay within the confines of the work area and do not venture outside of the demarcated work area into traffic.
		If you observe that contractor may back into structures, vehicles, fences, etc., notify contractor immediately with pre-determined signals. Do not cross the path of the heavy equipment.
		Stand clear of moving heavy equipment.
	Overhead electrical lines	Look overhead to assess if any utilities are present and confirm with the GZA subcontractor that they are aware of the overhead utility location and to take appropriate actions to prevent contact with the overhead utilities and to minimize any arc flash hazards. Review GZA's Electrical Safe Work Practices Program 03-3003
		Stand clear of overhead lines while equipment is being mobilized.
		If the equipment contacts an overhead power line, inform any occupant and/or operator to remain in/on the rig until the line is de-energized. Summon help immediately.
Unloading equipment and materials	Strains and sprains	Use proper lifting techniques when lifting equipment. Seek assistance with heavy loads.

## Task 4.4A Excavation and Trenching (Heavy Equipment)

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		Have contractor hand excavate where required to expose utilities.
		Where possible have contractor lockout and purge active utilities.
		If excavation exposes utilities, have the contractor assure that lines are properly supported.
		Require the contractor to use non-sparking tools around active gas lines and implement safe work practices.
		If any damage is caused by GZA's subcontractor during excavation to utility lines, notify utility owner. If the contractor isn't working for GZA, either the contractor or its client should contact the utility owner.
		Notify utility owner if cathodic protection (coatings, groundbeds, etc.) has been exposed.
	Collisions with workers using shovels and hand tools	GZA employees must communicate and coordinate their actions and movements.
	Falling objects, debris	Wear hardhat and safety glasses/goggles. Do not work under raised loads
	Falls into Open Excavation	Secure work zone using barricades, caution tape, etc.  DO NOT stand near edges of excavations, maintain 2' distance. Keep non-essential personnel away from the work zone.
	Hazardous Liquid Spills	Confirm with GZA sub contractor that spill control kit, including sorbents, pad booms and shovels are available on site if needed.. Have GZA subcontractor line waste loading areas with polyethylene sheeting. Immediately report any spill to the project manager.

## Task 4.4A Excavation and Trenching (Heavy Equipment)

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
	Exposure to Hazardous Substances	<p>Be alert for hazardous site contaminants (as indicated by odor, visual characteristics, location, and site history). Assess whether procedures and contingencies are in place for characterizing hazards and protecting workers by use of appropriate air monitoring, personal protective clothing and respiratory protection, as needed. If contamination is identified at the Site only personnel trained and medically qualified to work on hazardous sites will be permitted to proceed with the work. Notify project manager if such conditions are encountered.</p> <p>Become familiar with hazards associated with hazardous commercial products used in construction (fuels, silica sand, grout, cement, etc.). Review Safety Data Sheets (SDSs) for such products and participate in daily safety tailgate meetings.</p>
	Noise	Wear appropriate hearing protection.
	Cave-In Hazards	<p>Excavation must be monitored by a Competent Person.</p> <p>Confirm with contractors that operators are properly trained for excavating.</p> <p>The proper sloping/shoring for the soil type must be used.</p> <p>There should be no standing water in the excavation.</p> <p>Place Spoils away from the edge of excavation as appropriate for the soil type.</p> <p>Excavations greater than 20 feet in depth must be designed by a registered professional engineer.</p> <p>Evaluate excavations at the beginning of each shift and following rain events</p> <p>DO NOT enter excavations unless absolutely necessary. The excavation must be safe to enter before entering. A means of egress (stairways, ladders or ramps) from trench excavations greater than 4 feet in depth must be positioned so that no more than 25 feet of lateral travel is required.</p>

## Task 4.4A Excavation and Trenching (Heavy Equipment)

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		<p>If needed to enter excavations consult with onsite Competent Person to assess if it is safe to do so. If you are the Competent Person assess if it is safe to enter excavation before doing so.</p>
	Hazardous Atmosphere	<p>Identify possible contaminants.</p> <p>Set action levels for exposure.</p> <p>Monitor air quality.</p> <p>Air monitoring equipment must be properly calibrated.</p> <p>Refer to the site specific Health and Safety Plan for the use of proper personal protective equipment (PPE) and respiratory protection.</p>
Soil Loading and Transport	Roadway/traffic hazards	<p>Be alert at all times; never step outside traffic cones.</p> <p>Wear high visibility vests at all times.</p> <p>Be familiar with escape routes at each location. Stand clear of soil loading area and always make sure the equipment operator and truck drivers know your location.</p> <p>Follow project Traffic Control Plan. Be alert at all times and never step outside the traffic cones.</p> <p>Use a Police detail when necessary.</p>
		Hazardous Material Contamination
		<p>Equipment and truck wheels, running boards, etc. must be free of loose materials before leaving Site.</p>
Handling Flammable Liquids	Fire Hazards	<p>Use only approved fuel containers for fuel, heavy duty metal cans with stable base and self closing nozzle is recommended.</p> <p>Store flammable liquids in appropriate flammable storage cabinet and containers.</p> <p>Be familiar with emergency procedures and where fire extinguishers are present on site.</p> <p>Inform GZA subcontractor if you observe improper storage of used rags and unsafe storage of flammable/combustible liquids brought on site.</p>

## Task 6.1 Sampling/Logging/Survey - Test Pits and Excavations

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
<p>Review Related THA's – 4.4A Excavation and Trenching (Heavy Equipment) 21.1 General Outdoor Field Work</p>		
Observation of Test Pit Excavations by GZA	Various Physical and Chemical Hazards	Review THA 4.4A Excavation and Trenching (Heavy Equipment)
Excavation Survey	Fall into excavations; Struck by heavy equipment	Stand away from edges of excavations.
		Stay clear of equipment at all times. Do not approach operating heavy equipment until eye contact is made with operator and equipment operation is stopped
		Observer needs to be at the furthest end of the excavation from the operator and in line of sight with the operator.
Sampling and logging of soil	Cave-ins and engulfment	Never ride inside the bucket to observe the inside of the test pit excavation.
		Measuring test pit depths can be performed by attaching a tape measure to the boom of the excavator, or marking the boom.
		Observers are NOT to measure pit depths by hand from the side of the pit. Use proper retractable tape measures.
		Approach a test pit for logging from the sloped end. Never stand above vertical wall.
		Watch for cracks/fissures in the ground surface in the immediate vicinity of the test pit, which indicate imminent sidewall failure/cave-in.
		DO NOT enter excavations that are not sloped or shored properly and have not been evaluated by a Competent Person to be safe.
		Always first attempt to collect soil/water samples from the securely placed bucket of the excavator on the surface of the ground at a safe distance from the excavation. Use proper communication with operator when sampling from the bucket of the excavator.
		Assess if confined space entry procedures need to be implemented. If so follow GZA's Confined Space Entry procedures.

## Task 15.1 Offshore Drilling and Construction Observations

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
---------------	-------------------	----------

Review Related THA's –

4.1 Drilling Observation, Monitoring Well Installation Observations and Soil Sampling

4.4A Excavation and Trenching (Heavy Equipment)

Pre Launch Planning	Drowning.	Review GZA's Working Near Water Policy 03-3005. Wear US Coast guard Approved PFD.
	Getting lost or breaking down.	Communicate work schedule and check-in time with manager or other on-shore personnel. Check cell phone and or marine band radio service.
	Equipment getting inundated.	Secure vehicle and any land side equipment above tide level.
	Swamping, sinking, running aground, getting beached by tide.	Check Marine forecast and tide chart, discuss adjustments to schedule as appropriate.
	Getting lost, running aground.	Discuss with operator Navigation capabilities in case of weather (is boat equipped with radar or GPS to find home if fog sets in). Discuss with operator Navigation lights (to run after dusk) and adjustments to schedule as appropriate.
Travel to Drilling Platform (floating or jack-up barge)	Slips, falls, capsizing	Board and seat in location that will not destabilize or overload the boat, or obstruct operator's view (surfaces are slippery and may be moving). Vessel will move with tide flow. Move deliberately (surfaces are slippery and may be moving). Hold onto available hand rails.
	Getting crushed or pinched between moving vessel, or pulled overboard by line.	Understand and review with vessel operator safety procedures and follow direction. Keep hands and feet clear from pinching/crushing between boat and other dock float pier, or boat.
Working on Barge	Falling overboard.	Make sure appropriate fall prevention and rescue (throw ring, etc) is in place around perimeter.
	Getting hit by a tool or knocked overboard.	Observe and discuss drilling/construction operations safety with contractor's drilling superintendent. Agree on a safe location from which to monitor work. It should provide sufficient access to operations to observe, log samples, and review stored samples, and be away from potential casing, rod and tool mishaps. Stay clear of mooring operations, lines winches, etc. The safe place for the observer will probably change with operations since this is a very compact work area. Consider where you would move if equipment became unstable or the barge was to overturn.

## Task 15.1 Offshore Drilling and Construction Observations

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		All equipment should be securely stowed when not in immediate use. A wake, wave or gust may cause casing rods or other items to move. Notify the contractor if you observe unsecured equipment.
	Swamping, sinking, running aground, getting beached by tide.	Be a second set of eyes for the drillers/operators noting tide level, wind, wake, equipment action/reaction and current conditions as these may impact safety.
	Getting stranded on barge, or forced to stay on barge during storm.	Make sure there is always a means to get back to shore. If a transport boat was used to get to the barge, make sure it is available if you might need to get to shore due to weather or sea conditions.
	Collision with marine traffic.	Avoiding collision and having minimum Coast Guard required lighting is the Contractor's responsibility. However, maintain situational awareness and stay alert for any nearby vessels and notify contractor if you observe lights are not working properly.  Confirm with contractor that work locations were cleared with harbor master or Coast Guard.
	Emergency Procedures	Review and follow the emergency procedures identified by the vessel operator.
	Underground Utilities/ Cables	Confirm with Contractor that they had conducted a review of the Navigation charts and checked shoreline signs.
	Overhead Electrical	Same as on shore. Review GZA's Electrical Safety Work Practices 03-3003.
Offshore Drilling/Work, Construction and other work operations	Collisions, injuries	Confirm with Drill Crew that pre-operation check of equipment have been performed and equipment is in good working order., ensuring cables, ropes and winches are properly maintained and in good condition.  Occupants shall wWear US Coast Guard approved PFDs.  Notify contractor if you observe Secure loose materials on deck of barge or in boat especially casing and rods that are not properly secured.
		Equipment maintenance hazards
	Moving machinery, rotating parts, etc.	Maintain safe distance from rotating augers and other moving parts relative to drill rig. Maintain eye contact and line of visibility with Operator of equipment. When Drill/Construction Crew is performing maintenance operations on the rigs stand clear of their work at a safe

## Task 15.1 Offshore Drilling and Construction Observations

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls	
	Hygiene	Provide adequate facilities/equipment for hand washing prior to eating (e.g., baby wipes, hand sanitizers, paper	
	Cuts, scrapes, bruises, lacerations from use of tools	Properly maintain tools; do not use damaged tools.	
		Wear eye protection	
		Store and carry tools correctly	
		Use the correct tool for the job.	
		Support the work piece (using clamps, vise, sawhorse, or other device). Do not hold the work piece with your hand.	
		Protect "off hand" from gouges, hammer blows, cutting tools, etc. Position your "off hand" to prevent injury in case of slip of the tool. Support the work piece (using clamps, vise, sawhorse, or other device). Do not hold the work piece with your hand	
		Fire hazards	Confirm that all flammable/combustible liquids are stored in proper containers. Protect "off hand" from gouges, hammer blows, cutting tools, etc. Position your "off hand" to prevent injury in case of slip of the tool.
			Confirm that Driller is disposing e of oily rags properly in covered containers.
			Confirm that that a fire extinguisher is present with rig and know its location. Dispose of oily rags properly
Observe Driller's safety rules when they are welding or using torches. Stay away from "Hot Work" operations.			
	Notify the Driller if you observe flammable/combustible materials near "Hot Work" operations. (such as debris, fuels, grass/weeds, etc.)		
	Observe "no smoking" policies

4.4A Excavation and Trenching (Heavy Equipment)

21.1 General Outdoor Field Work

<p>General Construction Oversight</p>	Slips, trips and falls	<p>Maintain clean and sanitary work area free of tripping/slipping hazards.</p> <p>Assess for adequate space to work safely with sound footing.</p> <p>Assess for adequate lighting.</p> <p>Assess that walkways and footpaths are free of obstructions.</p>
	Physical Hazards	<p>Become familiar with construction-related hazards prior to going onsite. Be cognizant of slips, trips and falls and overhead hazards of bumps, falling objects. Review related THAs noted above.</p>
	Electrical shocks	<p>Use GFCIs with all electrical power tools.</p> <p>Review GZA's Electrical Safe Work Practices program 03-3003.</p>
	Cuts, scrapes, lacerations from hand tools	<p>Know how to properly use hand tools and follow proper guarding procedures.</p>
	Struck by, caught by, run over by equipment	<p>Do not stand near or where equipment operators cannot see you. Always be in line of sight.</p> <p>Do not make sudden moves and always let the operator know of your intentions.</p> <p>Wear appropriate safety equipment as required by the Site Specific Health and Safety Plan when near heavy equipment and in general work area (hard hat, steel toe boots, work clothes, high visibility vest, eye and hearing protection, etc.).</p> <p>Understand the daily Scope of Work by participating in daily safety tailgate meetings and review the appropriate Job Hazard Analysis.</p>
	Exposure to Hazardous Substances	<p>Review the Site Specific HASP, attend and Site Specific orientation and/or training as required prior to performing work.</p> <p>Become familiar with hazards associated with hazardous commercial products used in construction (fuels, cement, epoxy, paint, sealant etc.). Review the SDSs for such products are available, and wear appropriate personal protective equipment.</p> <p>Conduct air monitoring as required by the HASP and use appropriate PPE as specified in the HASP.</p>

## Task 17.1 Construction Oversight

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		<p>Be alert for hazardous site contaminants (as indicated by odor, visual characteristics, location, and site history). Become familiar with procedures and contingencies for characterizing hazards and the use of appropriate personal protective clothing and respiratory protection, as needed.</p>
Energized or Gas Powered Equipment	Personal Injury	<p>Perform equipment safety inspection daily; assess if pressure relief devices, wire ropes, hoisting equipment, hydraulic hoses, and emergency shut-off switches are in good working condition.</p> <p>If power equipment is being used, become trained in the use of the equipment by a qualified operator. Become familiar with the manufacturer's operating manual and warnings.</p> <p>Do not disable the manufacturer's built-in safety guards or do not operate if the safety mechanisms, controls or switches are disabled or are not functioning properly. Inspect the equipment for damaged or missing parts, and de-energize the equipment if it is not in use.</p> <p>Prior to refueling, turn off the equipment and allow the equipment to cool down.</p> <p>Move any loose clothing or equipment that can come in contact with moving or high temperature parts.</p> <p>Keep on hand a properly-sized and inspected fire extinguisher appropriate for the work.</p> <p>Inspect equipment for structural integrity, proper footing, tie backs, support, locked wheels, etc.</p>
Observations from elevated surfaces, man lifts, scaffolds, etc.	Fall from elevated work areas/surfaces	<p>Cordon off around the work area.</p> <p>Inspect manlifts and scaffolds being used by GZA personnel equipment for structural integrity, proper footing, tie-backs, support, locked wheels, etc.</p> <p>Use three point of contact while climbing ladders or scaffolding.</p> <p>Check for safety nets, railings, guardrails, etc. and their condition or for damage</p> <p>Use the proper fall protection system for the work being conducted (i.e. fall arrest or fall restraint). For fall arrest systems verify that swing falls and fall clearance distances are accounted for.</p> <p>Inspect body harness/lanyards used by GZA personnel for damage and missing parts.</p>

---------------	-------------------	----------

Review Related THA's –  
21.1 General Outdoor Field Work

Pre work task for site visit	Adverse Weather Conditions	Assess weather conditions prior to on-site work and examine forecast for anticipated period of work.
		Dress appropriately for weather conditions (e.g., precipitation, temperature ranges over anticipated duration of field work).
		Use protective ointments such as sunscreen and chap stick, as appropriate to the field conditions.
Conduct visual inspection of site	Dangerous Terrain	Be aware of the site terrain, watch for holes and rocks that can be tripping hazards
		Learn to identify and watch for plants such as thorn bushes and poison ivy that can either scratch you or give you a rash.
Collecting sample	Muscle strain from lifting heavy objects	Use proper lifting techniques. Use appropriate mechanical assistance and tools when possible. Wear work gloves and steel toed boots.
	Exposure to unknown sample	Be sure to treat effluent samples as unknowns and wear the proper PPE.  If there are any unusual odors/fumes coming from a sample, especially those that cause reactions in the eyes or nose, leave the area and inform a supervisor immediately.

## Task 21.1 General Outdoor Field Work

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
Pre-work preparation	Overlooking of potential hazards	Become familiar with project area and job site by reviewing available on-line mapping (USGS Topographic, NWI Wetland, NRCS Soil, etc.; and aerial photographs before visiting site. Understand related hazards through review of this and other Task Hazard Analyses and participate in daily safety tailgate meetings (where applicable).
		Communicate Task Hazard Analysis and Lessons Learned information to operator(s) prior to initiating work and throughout the project as needed.
Driving to site	Vehicle accidents/collisions/injuries	Perform pre-operation check of vehicle, verifying service brakes, parking brake, steering, lights, tires, horn, wipers mirrors and glass are in good condition. verify that the rig is roadworthy.
		Wear seat belts always when driving even on site.
		Secure loose materials in cab or bed of vehicle.
Working within transportation corridors or active construction sites	Collisions injuries	Keep windshields, windows and lights cleans.
		Abide by safe driving procedures.
		Backing collisions
		If possible avoid backing by using a route that allows you to pull through.
		If backing up from a parked area do a quality 360 walker.
		Wear high visibility safety vest on site when out of personal or GZA vehicle.
		Park vehicle in designated parking locations, or select off-road area that is firm, and without hazards. Directly inspect parking location on foot if necessary.
		Use emergency flashers or other appropriate vehicle warning system as appropriate to local conditions when parking vehicle.
		Use emergency flashers or other appropriate vehicle warning system when parking outside of standard parking spaces, or to stop in right-of-
		Be alert at all times; never step outside traffic cones.

## Task 21.1 General Outdoor Field Work

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls	
		Stand clear of moving heavy equipment and away from any overhead utility lines until equipment is safely in position and parked properly and securely by the contractor.	
		Do not wear headphones or earbuds, or listen to music or talk on the phone, which may distract from work hazards.	
		Crossing Automobile traffic lanes	Wear high visibility safety vests at all times when out of vehicle and working within or adjacent to the roadway.
		Crossing Airport Movement Areas (e.g., Runways, taxiways, approaches)	Learn, know, and conform to project site Airport's, Airfield's, or Airbase's protocol for crossing movement areas (whether on foot or in vehicle).
			Work within airport movement areas or safety zones must be coordinated with the Air Traffic Control Tower.
			Vehicles to have blinking or flashing lights or beacons; pedestrians to wear high visibility safety vests.
	Crossing Railways	Using protocol, maintain communication with airport security and air traffic controllers.	
		Work within active railroad ROWs requires railroad safety training. No work can be done within the railroad traffic envelope without the permission of a railroad flagman.	
		No equipment or vehicles can cross without the permission of a railroad flagman.	
		Expect any train on any track coming from either direction at any time.	
		Working in Natural or Remote Areas	Slips, trips, fall
		Be careful when walking in heavily vegetated areas. Mind tangles of vines, thorny branches, and slippery logs and rock surfaces. Dense vegetation and especially entangled vines present trip hazards, or can mask voids, sharp objects, or other hazards beneath.

## Task 21.1 General Outdoor Field Work

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		Wear proper footwear for conditions.
		Store tools in their proper storage location when not in use.
		Provide adequate lighting when necessary.
	Falls into excavations/ voids	Stand away from edges of excavations and voids. Do not attempt access without proper equipment / training. Remember that some excavations or voids may constitute a confined space and may present structural stability issues.
	Cave-ins and engulfment	DO NOT enter caves, sinkholes, excavations, and other voids or concavities that are not sloped or shored properly and have not been evaluated by a competent person to be safe.
		Stand away from edges of excavations, cliffs, dug wells, and other voids.
Watch for cracks/fissures in the ground surface in the immediate vicinity of a pit or void, which indicate imminent sidewall failure/cave-in.		
Working among hazardous biota	Plant toxins Incidental contact	Assess if confined space entry procedures need to be implemented.
		Before entering void (if required to do so and with proper training) be aware of any hazards at the surface (boulders, equipment) which may fall into the void.
		Know the appearance of poison ivy and poison sumac in all seasons, and if sensitive to these toxins, carry and use special cleaning soaps/solutions when thought to be exposed. Stock first aid kit with poison ivy/sumac cleaning soaps/solutions.
	Ticks	Ticks carry risk of Lyme's and other Diseases. Tick season is basically any field day above 40 degrees F.
		Tuck pants into long socks.
		The application of DEET (or permethrin pre-treatment) to clothing in season to control exposure to ticks is recommended.
		Check clothing for ticks frequently.

## Task 21.1 General Outdoor Field Work

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		Check whole body immediately upon returning from field and shower.
	Mosquitoes	Be aware of intermittent seasonal reports of mosquito borne diseases, such as West Nile disease and Eastern Equine Encephalitis (EEE), and their locations relative to your field site. Use of DEET or other mosquito repellent is recommended.
	Stinging bees and wasps	<p>Be aware of potential cavity, suspended or ground nesting bee/wasp/hornet nests. Avoid undue disturbance or approach with appropriate safety clothing, protection and netting.</p> <p>Take appropriate precautions if allergic to bees. Carry at least two epi-pens in first aid kit as well as anti-histamines (oral and inhalers).</p> <p>Avoid areas of heavy bee activity if allergic. Avoid perfumed soaps, shampoos, deodorants, colognes, etc. that may attract bees.</p>
	Poisonous Snakes	<p>Be aware of terrain likelihood of harboring poisonous snakes in your work zone. Avoid reaching or stepping into hidden areas (such as into wood pile, rock pile, debris pile, stone wall, etc.) without pre-inspection.</p> <p>Coordinate with local hospitals to verify they have proper anti-venom in stock.</p> <p>Learn first aid procedures in case of poisonous snake bite.</p> <p>Devise an action plan and include in the site-specific HASP.</p>
	Wild Animals	<p>Do NOT handle wildlife unless properly trained to do so.</p> <p>Beware of any wild animal that shows no sign of wariness of humans.</p> <p>Do NOT attempt to feed wild animals or to help apparently injured wild animals.</p> <p>Be aware of domestic animals that may also pose a threat such as dogs off leash, bulls out to pasture, etc.</p>

## Task 21.1 General Outdoor Field Work

### HAZARD CONTROLS

GZA Job Tasks	Potential Hazards	Controls
		Wear proper footwear modified for traction on ice.
	Electrical storms	<p>If lightning is observed during drilling activities, work shall be suspended immediately and employees shall find suitable shelter (building or vehicle at minimum). Work will commence no sooner than 30 minutes after the last indications of lightning have been observed</p> <p>Seek shelter inside a walled building or your vehicle.</p> <p>Open picnic pavilions and under trees are not adequate shelters.</p> <p>Assess vulnerability to lightning strikes as soon as thunder is heard on the horizon. Open areas and higher elevations are more susceptible to strikes.</p> <p>Tall objects such as metal towers and flag poles may attract lightning.</p> <p>Consult internet weather radar tracking devices to learn of impending storm patterns proximal to your work area.</p>
	High Winds	<p>Avoid working at high elevations, elevated platforms, and other exposed areas during high wind conditions.</p> <p>Assess work area for equipment that may be blown down, over, or carried aloft by high winds.</p>
Working in areas without sanitary facilities	Hygiene related hazards	<p>Provide hand washing kits (e.g., baby wipes, hand sanitizers, paper towels, bottled water, etc.) to be used prior to eating and drinking.</p> <p>Have garbage bags handy to collect trash.</p>
Working in remote areas	Emergency Conditions	<p>Be familiar with onsite emergency procedures and route to nearest hospital.</p> <p>Have a first aid kit available; know its contents and how to use them.</p> <p>Carry a cell phone during all field work for emergency purposes, and confirm the nearest location of cell phone signal on site prior to start of worksite.</p>
	Disorientation	Plan your route and anticipated progress prior to field work.

## KEY THINGS TO REMEMBER

### WHERE TO FIND MORE INFORMATION:

- **Publicly Accessible Site File**

Files related to the former Tidewater Site are maintained at RIDEM's Office of Waste Management filed under Former Tidewater Coal Gasification Plant (Pawtucket), RIDEM Case No. 95-022. Appointments to view the files can be made by contacting RIDEM, Department of Technical and Customer Assistance, 235 Promenade Street, Providence, Rhode Island (telephone: 401-222-4700 extension 7307, <http://www.dem.ri.gov/topics/filerevw.htm>).

- **Publicly Accessible Informational Websites:**

- **RIDEM Document Listing Website:**

<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>

Certain documents related to the investigation and remediation of the Former Tidewater Site are maintained at the website operated by RIDEM. The website contains publicly available submittals pertaining to the Site dating back to 2007 and documentation will continue to be posted there.

- **National Grid Document Listing and Informational Website:**

[www.tidewatersite.com](http://www.tidewatersite.com)

This website provides updates on current and proposed activities at the Site. In addition, this website includes information on the nature and history of MGPs, history of the Tidewater facility, description of the Tidewater Site and regulatory background, access to key project documents and relevant correspondence, copies of public notices about the Site, public announcements, status update archive, frequently asked questions and Site contacts.

- **Local Informational Repository—Pawtucket Public Library**

The local information repository at the Pawtucket Public Library contains copies of submittals included on the RIDEM website listed above. Electronic copies of these submittals are sent to the repository on a monthly basis. Upon request, National Grid will provide hard copies of the material for inclusion in this repository. Pawtucket Public Library hours are Monday through Thursday, 9 a.m. to 8:45 p.m.; and Friday and Saturday, 9 a.m. to 4:45 p.m. The Pawtucket Public Library is located at 13 Summer Street, Pawtucket, Rhode Island (telephone: 401-725-3714).

- **Bulletin Boards**

National Grid has installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. Weekly updates during the work that are submitted to RIDEM will be posted to the bulletin boards, as well as how to find all submitted documents and how to receive more information about the Site. Site contact information is also posted on the bulletin boards. During active earth disturbing activities, air monitoring data will be posted on the bulletin boards. Additionally, on a daily basis during earth disturbing activities, a color coded system will be used to indicate whether any active excavation is occurring.

**HOW TO JOIN:**

• **Mailing List**

National Grid established a mailing list for the former Tidewater Site. The list includes abutting property owners, tenants, easement holders, municipalities and any community well suppliers associated with any well head protection areas that encircle the Site, as well as people who have previously provided their mailing address to National Grid. Interested persons can be added to this list via an email request to Michele Leone at National Grid ([Michele.Leone@nationalgrid.com](mailto:Michele.Leone@nationalgrid.com)) with your name and address or by calling Michele Leone at 1-781-907-3651. National Grid will use the mailing list to announce upcoming public meetings and distribute fact sheets and other information about the Site. In addition, National Grid will use the list to distribute information regarding reports and other documents added to the repository.

• **Email Distribution List**

Interested parties have the option to receive information via email. National Grid will also email the distribution list when significant field activities begin and as planned field activities may change. Interested persons can be added to the email list through National Grid's Tidewater website or by emailing a request to Michele Leone at National Grid ([Michele.Leone@nationalgrid.com](mailto:Michele.Leone@nationalgrid.com)) with your name and email address or call Michele Leone of National at 1-781-907-3651.

• **Phone Message Network**

National Grid has established a phone message network to distribute time-sensitive information to interested parties on air monitoring results during periods of active earth disturbing activities at the Site. Sign up for the phone message alert system can be made by emailing a request to Michele Leone of National Grid ([Michele.Leone@nationalgrid.com](mailto:Michele.Leone@nationalgrid.com)) or by calling Michele Leone at 781-907-3651 with your name and phone number.

## GLOSSARY AND HELPFUL TERMS

Electric switching station and substation

Substations are needed wherever electricity must be converted from one voltage to another. Transmission lines carrying a high voltage come into the substation where equipment reduces (or switches) the voltage to a level suitable for local distribution.

Engineered Cap

An engineered cap is a ground surface cover (liner, pavement, clay, soil, or another engineered material) designed to limit exposure to impacted material below. Engineered caps are either impermeable or permeable.

Impermeable Engineered Cap: An impermeable engineered cap is a specific type of cap that limits water (e.g., rain, snow melt) from entering the ground. The type of cap is typically made of clay or plastic liner.

Permeable Engineered Cap: A permeable engineered cap is a specific type of cap that allows water (e.g., rain) to enter the ground beneath it. This type of cap is typically constructed using clean soil and a fabric material.

Monitored Natural Attenuation (MNA)

Monitored Natural Attenuation (MNA) refers to the reliance on natural attenuation processes to reduce contaminant levels in soil and/or groundwater to achieve site-specific remediation objectives. Natural attenuation is the process that breaks down certain compounds into different compounds by biological or chemical activity.

Natural gas regulating station

Regulating stations are used for natural gas distribution and are designed to reliably control system pressures and maintain the continuity of gas supply to the community during normal and critical demand periods.

Non-Aqueous Phase Liquid (NAPL)

Non-aqueous phase liquid (NAPL) refers to a compound present at a concentration such that it exists as a separate phase when placed in water. This definition may apply to Light Non-Aqueous Phase Liquids (LNAPL) and/or Dense Non-Aqueous Phase Liquids (DNAPL). DNAPL is denser than water and sinks below water; DNAPL is sometimes called “sinker”. Maple syrup is an example of a DNAPL. LNAPL is lighter than water and floats above water; LNAPL is sometimes called “floaters”. Examples of LNAPL are vegetable oil or paint thinner.

## GLOSSARY AND HELPFUL TERMS

Physical Containment	Physical containment refers to the installation of a subsurface barrier which is used to contain impacted groundwater and/or <a href="#">NAPL</a> . Examples of subsurface barriers include an excavated trench filled with relatively impermeable material or a sheet pile wall driven into the ground.
Polycyclic Aromatic Hydrocarbons (PAHs)	A class of chemicals substance formed by burning coal, gas, oils, and tobacco. PAHs are typically detected in shallow soils, particularly in urban environments. Sources of PAHs include burning of wood, vehicle exhaust, grilled foods, cigarette smoke, asphalt roads, and roofing products.
Polychlorinated Biphenyls (PCBs)	A manufactured chemical substance that had many uses in industrial processes and construction materials. PCBs are typically found at many former power plants and current electric substations due to their use in electrical equipment. PCBs are also commonly detected in caulk, paints, inks, dyes, grout, floor finishes, and adhesives.
Program Letter	A Program Letter is issued by RIDEM to formally put the findings of the <a href="#">Site Investigation Report (SIR)</a> out for a public comment period.
Public Involvement Plan (PIP)	A Public Involvement Plan (PIP) is an agreement between the party conducting response actions and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the site. PIPs are tailored to the specific conditions presented by individual sites. The party responsible for conducting response actions at a site is also responsible for conducting public involvement activities at the site and carrying out the activities listed in the PIP during the site cleanup process. A PIP is a living document and can be amended to reflect additional issues or challenges that may arise during the site cleanup process.
Remedial Action Alternative (RAA)	A Remedial Action Alternative (RAA) is a remedial strategy that has been evaluated to potentially address soil and/or groundwater impacts at a Site. Typically, several RAAs are evaluated for a Site using comparison criteria, including cost, effectiveness, reliability and implementability. At the conclusion of the evaluation, one RAA is identified as the preferred RAA or the best fit for the final remedy (also known as “Remedial Action”).
Remedial Approval Letter (RAL)	The Remedial Approval Letter (RAL) is a formal written communication issued by RIDEM to formally approve the <a href="#">Remedial Action Work Plan (RAWP)</a> and to initiate the remedial work.

## GLOSSARY AND HELPFUL TERMS

Remedial Action Work Plan (RAWP)	A document submitted to RIDEM for review and approval which describes how the selected remedial alternative for the Site will be implemented.
Remedial Decision Letter (RDL)	The Remedial Decision Letter is a formal written communication issued by RIDEM to formally agree with the findings of <a href="#">the Site Investigation Report (SIR)</a> after a public comment period.
Remediation Regulations	Refers to the RIDEM “Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases”
Short Term Response Actions (STRA)	Any activities undertaken immediately following the discovery of a release of hazardous material in order to completely or partially contain, clean up or treat the released material and/or remove an imminent hazard if it exists.
Site Investigation Report (SIR)	A document submitted to RIDEM for review and approval which presents the history of a Site and investigation activities, describes the nature and extent of impacts based on the findings of the investigations and identifies the preferred <a href="#">Remedial Action Alternative (RAA)</a> .
Source Removal	Refers to the removal of subsurface material which may be acting a source for continued impact to soil and/or groundwater.
Source Stabilization	Refers to a remedial approach where impacts are physically bound or “stabilized” within a mass to limit further migration. An example of stabilization would be the addition of a cement-like material to soil which would lead to a “hardened” matrix and would limit the migration of impacts from that material.
Total Petroleum Hydrocarbons (TPH)	Term used to describe a large family of several hundred chemical compounds that originally come from crude oil. Crude oil is used to make petroleum products. Measurements of these compounds in soil and groundwater is commonly expressed as TPH. TPH is commonly detected in industrial/commercial areas with sources including gasoline, motor oils, and asphalt.
Upper Concentration Limit (UCL)	An upper concentration limit (UCL) is when a compound exceeds a defined numerical concentration as set forth in the <a href="#">Remediation Regulations</a> or is found in the environment as <a href="#">NAPL</a> .
Volatile Organic Compounds (VOC)	Volatile organic compounds (VOCs) are typical compounds found at MGP sites and other sites where coal, oil, refined products and other hydrocarbons were burned or used. VOCs are also found in gasoline, paint thinner and cleaning products.

## 1.00 INTRODUCTION

GZA GeoEnvironmental, Inc. (GZA), on behalf of the Narragansett Electric Company d/b/a National Grid (National Grid), has prepared this [Public Involvement Plan \(PIP\)](#) for the Former Tidewater facility located at terminus of Tidewater and Merry streets in Pawtucket, Rhode Island (herein referred to as the “Site”).

The attached [Figure 1](#) shows a Site *Locus Plan*. On March 23, 2012, the Rhode Island Department of Environmental Management (RIDEM or the “Department”) informed National Grid that the Department received a request that a formal process be set up for public participation in cleanup planning for the Site. GZA prepared this *PIP* based on the requirements of Rule 7.07 A, B, C and D of the [Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases \(Remediation Regulations, <http://www.dem.ri.gov/pubs/regs/regs/waste/remreg11.pdf>\)](#). Per Rule 7.07 (Public Involvement), this *PIP* addresses the following primary elements: 1) Public Notice, 2) Fact Sheets and Enhanced Communication, 3) Community Meetings, and 4) Information Repositories. In preparing this *PIP*, GZA considered information and comments provided to National Grid by RIDEM, members of the Tidewater Shareholders’ Group and the public. National Grid conducted interviews in June 2012 to solicit input from the community, which were used in the development of this plan. Interview questions and responses are summarized in the attached [Exhibit III](#). On November 26, 2012, a notice detailing the availability of the Draft *PIP* was distributed to abutters and interested parties to solicit public comments. On January 29, 2013, National Grid held a public meeting to discuss public comments on the Draft *PIP*. Written public comments were provided to National Grid by RIDEM via a February 21, 2013 notification letter. This September 2013 final version of the *PIP* was revised in response to comments received at the January 29, 2013 public meeting, the written public comments received in February 2013 and an email received on March 6, 2013. A notification letter dated August 1, 2013 was provided by the RIDEM concurring with National Grid’s Response to Public Comments Letter dated March 22, 2013. RIDEM requested the Response to Public Comments letter be revised for recent updates on public involvement activities at the Tidewater Site and that the *PIP* be finalized.

A [Public Involvement Plan \(PIP\)](#) is an agreement between the party conducting response actions (in this case, National Grid) and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the Site. *PIPs* are tailored to the specific conditions presented by individual sites. The public involvement activities proposed at each site by the party conducting the response actions should reflect the needs of the community. The party responsible for conducting response actions at a site is also responsible for conducting public involvement activities at the site and carrying out the activities listed in the *PIP* during the site cleanup process. A *PIP* is a “living” document and can be amended to reflect additional issues or challenges that may arise during the site cleanup process.

This *PIP* addresses activities related to the investigation and cleanup of the Tidewater Site that are under the jurisdiction of RIDEM only, per the Remediation Regulations. This plan is not intended to cover Site activities relative to the day-to-day operations, including repair and maintenance of the natural gas regulating facility and electrical substation involving minor soil disturbances (i.e., fence post installation) or other uses of the property by National Grid. Activities at these facilities involving excavations of soils with the potential to create volatile emissions are covered by this *PIP*. In the event of a facilities emergency requiring immediate soil excavation (utility repair, etc.), National Grid will follow the soil management procedures prepared for the previous natural gas station regulator and electrical substation work (i.e., April 2011 *Materials Management Plan* and November 2012 *Soil Management Plan*, respectively). In addition, air monitoring will be completed during these emergency events in accordance with the September 28, 2012 air monitoring summary memorandum submitted to RIDEM to the extent practical.

The *PIP* is organized as follows:

- [Section 1.00](#) contains this introduction;
- [Section 2.00](#) includes a summary of relevant Site background information and current Site regulatory status;
- [Section 3.00](#) summarizes historic and current public involvement;
- [Section 4.00](#) describes the elements of the *PIP*; and
- [Section 5.00](#) explains how the *PIP* may be revised in the future; and
- [Section 6.00](#) describes information regarding roles and responsibilities for implementing public involvement activities; and
- [Section 7.00](#) presents a schedule for planned public involvement activities.

## 2.00 SITE DESCRIPTION

The following sections present a brief description of the Site, including historic and current uses; the Site's regulatory history and current status; an overview of investigation and remediation activities performed to date; and a description of planned remedial actions.<sup>1</sup> More details can be found on RIDEM's website (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>), National Grid's website ([www.tidewatersite.com](http://www.tidewatersite.com)), through RIDEM's Site files located at their offices or at the Pawtucket Public Library (see [Section 4.40](#) for details).

### 2.10 SITE DESCRIPTION, HISTORY, AND CURRENT USE

The Site was the location of the former Tidewater [Manufactured Gas Plant \(MGP\)](#) and the former Pawtucket No. 1 Power Station. It is listed as a "State Site" under RIDEM's

---

<sup>1</sup> Note that the planned remedial activities are subject to RIDEM review and approvals.

Remediation Regulations (RIDEM Case No. 95-022). It is now largely vacant with the exception of an active [natural gas regulating station](#) located on the western portion and an [electric substation](#) on the central portion. In addition, portions of the former Power Plant are used as an [active switching station](#). A locked perimeter chain-link fence secures the Site.

The Site is situated between Taft Street, an extension of Tidewater and Thornton streets to the west, and the Seekonk River to the east, and consists of approximately 23 acres across seven separate lots. This area of Pawtucket meets the U.S. Environmental Protection Agency's definition of an Environmental Justice (EJ) Focus Area and, therefore, per the Remediation Regulations, certain enhanced communications have been included as part of this *PIP* (see [Section 4.20](#)).

The Site has been subdivided into four areas, as described below and shown in Figures 2A, Exploration Location Plan for the North Fill Area (NFA) and Former Gas Plant Area (FGPA), and 2B, Former Power Plant Area (FPPA) and South Fill Area (SFA).

- North Fill Area (NFA) (northern portions of Assessor's Plat (A.P.) 54B Lot 826) – [Figure 2A](#);
- Former Gas Plant Area (FGPA) (southern portions of A.P. 54B Lot 826 and A.P. 65B Lot 662) – [Figure 2A](#);
- Former Power Plant Area (FPPA) (A.P. 65B Lot 645) – [Figure 2B](#); and
- South Fill Area (SFA) (A.P. 65B Lots 647 and 649, portions of Lot 648 and portions of A.P. 67B Lot 11) – [Figure 2B](#).

National Grid owns the entirety of the NFA, FGPA and FPPA, as well as portions of the SFA (A.P. 65B Lots 647 and 649). The City of Pawtucket owns additional portions of the SFA (A.P. 65B Lot 648 and A.P. 67B Lot 11). The current Site layout, key features and previous exploration locations are shown in Figures 2A and 2B.

The Site is bounded to the west and northwest by residential properties (A.P. 65B Lots 613, 614, 615 and 616), the International Charter School, the Blackstone Academy Charter School, and the George W. Smith and Son, Inc. Construction Company (A.P. 54B Lot 497). It is bound to the east by the tidally-influenced Seekonk River, to the south and southwest by the Francis J. Varieur School (A.P. 65B Lot 644) and the Max Read Athletic Field (A.P. 65B Lots 646, 650 and 564 and A.P. 67B Lot 21), and to the north by undeveloped property owned by the city of Pawtucket (A.P. 54B Lot 827).

RIDEM classifies the groundwater underlying the Site as a GB resource. Groundwater classified as GB refers to groundwater resources that RIDEM has designated as not suitable for public or private drinking water use. The Site is located approximately 1.4 miles from the nearest GA-designated area, which has drinking water that RIDEM designated as suitable for public or private drinking water use. This GA-designated area is east of the Site, near Slater Park, on the opposite side of the Seekonk River. Municipal

drinking water services the Site and its surrounding area. There are no documented public drinking water supplies within a one-mile radius of the Site. The closest designated wellhead protection area is located approximately 1.2 miles north of the Site.

The Pawtucket Gas Company commenced building the Tidewater [MGP](#) in the 1880s on the northern portion of the Site. The MGP operated from the 1880s to 1968. From the 1880s until 1954, the MGP generated gas using the coal and coke. These raw materials were barged to storage areas at the Site positioned along the Seekonk River. In later years (1954 until the late-1960s), operation of the MGP was limited to producing gas to supplement natural gas during high demand periods. In 1968, the MGP facility was decommissioned. Based on available information, it appears that the majority of the above ground MGP structures and tanks were razed at that time or before. The last of the two remaining gasholders on the Site (Nos. 7 and 8) were decommissioned and removed from the Site by National Grid in 2010. A gas regulator station remains on the former gas plant portion of the Site.

In regard to the electric generation portion of the Site, in 1890, the Pawtucket Gas Company commenced building the Pawtucket No. 1 Station for power generation purposes. The No. 1 Station operated on the Site from the early-1890s until 1975. The station used coal, petroleum based products, and residual by-product tars from the MGP for electricity generation. Petroleum products were historically stored in three large (approximately 900,000 gallons each) aboveground storage tanks (AST) formerly located on the southern portion of the Site. These ASTs were removed in the 1970s. The electrical transmission towers, transformer yard, and former engine room building (which currently contains the active switching station) remain on the former power plant portion of the Site.

## 2.20 REGULATORY HISTORY

RIDEM issued a *Letter of Responsibility* (LOR) dated September 12, 1995 to Blackstone Valley Electric Company (BVEC), a predecessor of National Grid. The Site was listed as State Site #95-022 following the issuance of the LOR. Since that time, several rounds of investigation and remedial actions have been performed at the Site.

## 2.30 SITE INVESTIGATION AND REMEDIATION STATUS

Environmental investigations have been performed on the Site since 1986. These Site environmental activities have been documented in reports submitted to RIDEM. The following is a listing of the primary Site reports prepared and submitted to RIDEM. Some of these reports can be accessed on the RIDEM website (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>) or on the Tidewater/ National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)). All reports are publicly available by request and by appointment through RIDEM's site files (refer to [Section 4.40](#) and "[Key Things to Remember](#)").

- December 1986 *Work Study Plan* prepared by GZA on behalf of Valley Gas Company (VGC);
- February 1989 *Field Investigation Report* prepared by RIDEM;
- May 1988 *Investigation at the No. 1 Station Site* prepared by Roy J. Weston, Inc. (Weston) on behalf of BVEC;
- May 1991 *Underground Storage Tank Closure Completion Report*, prepared by Metcalf and Eddy, Inc. on behalf of BVEC;
- February 1993 *Site Inspection Report*, prepared by RIDEM;
- August 1995 *UST Closure Assessment*, prepared by E.R. Pickett Co., Inc. on behalf of BVEC;
- December 1996 *Remedial Investigation at the Tidewater Site, Pawtucket, RI* prepared by Atlantic Environmental Services, Inc. (AES) on behalf of BVE and VGC;
- June 1997 *Additional Background Surface-Soil Sampling, Pawtucket, RI* prepared by AES on behalf of BVEC and VGC;
- January 1998 *Tidewater Site Application for Variance, Pawtucket, RI* prepared by AES on behalf of BVEC and VGC;
- January 1998 *Addendum to Tidewater Site Additional Background Surface-Soil Sampling* prepared by AES on behalf of BVEC and VGC;
- June 2005 *Short Term Response Action Report, Tidewater Former MGP, Pawtucket, RI* prepared by Vanasse Hangen Brustlin, Inc. (VHB) on behalf of New England Gas Company (NEGC);
- January 2007 *Short Term Response Action Plan (STRAP)* prepared by GZA on behalf of National Grid (Roadway Cap and South Washout Areas);
- June 2008 *Sediment Investigation Work Plan* prepared by ARCADIS on behalf of National Grid;
- February 2009 *Polychlorinated Biphenyls (PCB) Investigation and Cleanup Plan – Pawtucket No. 1 Substation* prepared by VHB on behalf of National Grid;
- June 2009 *Sediment Data Report Former Tidewater Facility* prepared by ARCADIS and Anchor QEA, LLC. (ARCADIS/Anchor) on behalf of National Grid;
- November 2009 *Remedial Summary Report – Response to Stormwater Release* prepared by GZA on behalf of National Grid;
- November 2009 *Supplemental Site Investigation Work Plan (SSIWP)* prepared by GZA on behalf of National Grid;
- December 2009 *Short Term Response Action Plan (STRAP) – Sheen Outbreak* prepared by GZA on behalf of National Grid;
- February 2010 *Short Term Response Action Summary – Sheen Outbreak* prepared by GZA on behalf of National Grid;
- October 2010 *Short Term Response Action Closure Report, MGP-Residuals Roadway Remediation* prepared by GZA on behalf of National Grid;

- October 2010 *Supplemental Site Investigation Work Plan Addendum* prepared by GZA on behalf of National Grid;
- October 2010/January 2011 *Short Term Response Action Plan – Former Steel Process Pipe* prepared by GZA on behalf of National Grid;
- January 2011 *Site Investigation Data Report (SIDR)* prepared by GZA on behalf of National Grid;
- April 2011 *Evaluation of Applicability of Air Pollution Control Regulation No. 9 & Air Quality Monitoring Program (AQMP)* prepared by GZA on behalf of National Grid;
- July 2011 *Gasholder Nos. 7 and 8 Decommissioning and Demolition Completion Report* prepared by GZA on behalf of National Grid;
- July 2011 *Remedial Action Alternative Evaluation (RAE) Report* prepared by GZA on behalf of National Grid;
- August 2011 *Supplemental Site Investigation Work Plan Addendum* prepared by GZA on behalf of National Grid;
- September 2011 *Short Term Response Action Completion Report – Former Process Pipe Removal* prepared by GZA on behalf of National Grid;
- November 2011 *Completion Report Performance-Based PCB Remedial Activities Natural Gas Regulator Station Area Former Tidewater Facility* prepared by GZA on behalf of National Grid;
- September 2012 *Site Investigation Report Addendum* prepared by GZA on behalf of National Grid; and
- September 2012 *Summary of Air Quality Monitoring during Substation Earthwork* prepared by GZA on behalf of National Grid; and
- May 2013 *Supplemental Site Investigation Work Plan: Soil Gas Sampling and Analysis* prepared by GZA on behalf of National Grid; and
- October 2013 *Supplemental Site Investigation Report Addendum* prepared by GZA on behalf of National Grid.

The January 2011 *SIDR* combined with the July 2011 *RAE* served to complete the [Site Investigation Report \(SIR\)](#) consistent with Rule 7.00 of the [Remediation Regulations](#). The January 2011 *SIDR* presents a comprehensive summary of all relevant environmental investigations and data collected at the Site. Findings of the *SIDR* indicate that soil and groundwater impacts related to the former MGP and power generation operations remain in the environment at the Site. MGP residuals and petroleum hydrocarbon-related impacts were detected in both surface (between zero and two feet below grade) and subsurface (more than two feet below grade) soils. In general, subsurface soils located at/or below the water table exhibited more significant impact when compared to surface soils. This condition is commonly found at MGP sites. The primary constituents detected in Site soils included [polycyclic aromatic hydrocarbons \(PAHs\)](#), [petroleum hydrocarbons \(TPH\)](#) and certain inorganics, most notably arsenic and lead.

In terms of groundwater quality, dissolved phase [volatile organic compound \(VOC\)](#) GB Groundwater Objective exceedances were observed in the eastern portion of the FGPA,

FPPA and SFA. The most prevalent compounds detected in groundwater were benzene and naphthalene, which is typical of former MGP and power plant sites. Groundwater in these areas was also impacted by [TPH](#) and cyanide, and [PAHs](#) to a lesser extent. In certain areas of the Site, sporadic [Upper Concentration Limit \(UCL\)](#) exceedances in the surface soils were identified, as well as more widespread UCL exceedances in subsurface soils, particularly in the FGPA and FPPA. In addition, Light Non-Aqueous Phase Liquid ([LNAPL](#), i.e., product floating on the groundwater surface) has been observed on the eastern portion of the FGPA and FPPA, and Dense Non-Aqueous Phase Liquid ([DNAPL](#), i.e., product that sinks to the bottom of a well) has been observed on the eastern portions of the FGPA, FPPA and SFA adjacent to the riverfront within groundwater monitoring wells. A color-coded map for the Tidewater project that illustrates areas of the Site where impacts have been identified in groundwater and soils has been provided as Figure 4. This map was presented at the Community Information Session held on March 27, 2013. This map was also posted on the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and the bulletin boards.

National Grid conducted soil gas sampling in accordance with the May 2013 Supplemental Site Investigation Work Plan during July and August 2013 in the interior portion of the Tidewater Site and along the perimeter of the Tidewater Site in response to public comment. The results of the interior soil gas testing are consistent with previous soil and groundwater testing at the Tidewater Site. While certain compounds were detected at low levels, none of the perimeter soil gas readings exceeded regulatory criteria established by the Connecticut Department of Energy and Environmental Protection (CTDEEP) for both residential and industrial/commercial settings. (Rhode Island does not have regulatory criteria for soil gas quality.) The results showed the closer the samples were to the boundary of the Site, the lower the concentrations of these compounds. Overall, the test results indicate that potential migration of impacted soil gas from the Tidewater Site towards neighboring properties and structures does not pose a risk to the neighbors. National Grid provided a fact sheet/summary, a figure and analytical soil gas results to RIDEM and public stakeholders describing the soil gas sampling and preliminary results on August 28, 2013 and posted this information to the Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)). A copy of this fact sheet is included in Exhibit I. National Grid submitted a comprehensive report describing this soil gas study and the results to RIDEM in October 2013. This comprehensive report was posted on the Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)).

Consistent with the requirements of Rule 7.04 of the Remediation Regulations, the July 2011 *RAE* identified and evaluated four potential [Remedial Action Alternatives \(RAAs\)](#):

- 1) RAA 1: No Action with [Monitored Natural Attenuation \(MNA\)](#);
- 2) RAA 2: [Engineered Cap](#), [Physical Containment](#) and [Limited Source Removal](#);
- 3) RAA 3: Source Removal / [Stabilization](#), Localized Physical Containment and Engineered Cap; and
- 4) RAA 4: Significant Source Removal and Engineered Cap.

These alternatives were developed considering:

- the potential exposure pathways and remedial objectives established for the Site;
- the Site's hydrogeologic setting;
- characteristics and extent of detected impacts;
- practical and logistical limitations;
- current and anticipated future Site use;
- technical feasibility;
- compliance with applicable regulations; and
- public concerns.

Cost effectiveness and permanency of the remedial alternative were also considered, along with the ability to address potential risks to human health and the environment, including protection of natural resources, and addressing the presence of [UCLs](#). The four RAAs were evaluated based on the following regulatory specific criteria:

- comparative effectiveness/permanency;
- comparative compliance with Remediation Regulations; and
- comparative implementability, cost, risk, implementation risk and timeliness.

In addition, the comparative analysis included technical assessments of Site-specific hydrogeological factors and consideration of other Site-specific conditions. These Site-specific conditions include current and anticipated future Site use as well as the potential impacts both on-Site and to the surrounding community during remedial implementation.

Based on this evaluation, RAA 2 was selected as the preferred alternative for the Site. This alternative involves the following components:

- installation of an engineered permeable cap across the NFA and an impermeable cap across the remainder of the Site;
- installation of a subsurface containment wall to mitigate the migration of [NAPLs](#) from the Site along the riverside of the FGPA, FPPA and portions of the SFA; and
- targeted [source removal](#) in the NFA, FGPA and the FPPA.

This alternative was selected based on its comparative ability to achieve the remedial objectives, low degree of implementation risk and relative timeliness at achieving the remedial goals.

As indicated previously, the [SIR](#) was completed with the submittal of the *RAE* to the Department in July 2011. The Department will issue a [Program Letter](#), per Rule 7.07 of the [Remediation Regulations](#), upon its review and acceptance that the Site has been adequately assessed. Following receipt of the *Program Letter*, National Grid will notify all abutting property owners, tenants, easement holders, the city of Pawtucket and other

interested parties that the investigation is complete and that RIDEM has concurred with the recommended remedial alternative. This notification will be performed consistent with [Section 4.10](#) of this *PIP* and will include a summary of the proposed remedial actions. Subsequent to this public notification and following receipt of any public comments, the Department will issue a [Remedial Decision Letter](#) formally approving the *SIR*. Following the issuance of the *Remedial Decision Letter*, National Grid will prepare and submit a [Remedial Action Work Plan \(RAWP\)](#) consistent with Rule 9.00 of the Remediation Regulations. The Department must review and approve the *RAWP* prior to implementation of the remedy through the issuance of a [Remedial Approval Letter](#). Many of the above remedial process steps will be accompanied by public meetings and comment periods. See [Section 4.30](#) and [Table 1](#) for more public involvement details regarding these remedial process steps.

### 3.00 PUBLIC INVOLVEMENT HISTORY

Consistent with the requirements of the Remediation Regulations, as well as specific requests from RIDEM and community members, National Grid has and continues to make information relative to the investigation and remediation of the Site available to the community. To date, National Grid has conducted several meetings with members of the community to solicit public feedback, answer questions and discuss concerns regarding the Tidewater site.

Per Rule 7.07A of the [Remediation Regulations](#) and as requested by RIDEM, National Grid and/or its environmental consultants performed public notifications prior to the completion of the several rounds of field investigation activities and [Short Term Response Actions](#). National Grid also completed public notifications prior to significant upgrades to the [natural gas regulating station](#) in April 2011 and to the [electrical substation](#) upgrades in August 2012. This notification process included mailing public notices to all abutting property owners, tenants, easement holders and the city of Pawtucket, which detailed information regarding the nature and timing of the proposed field activities. In addition, as part of the notification process completed in April 2010 and prior to Site investigation activities, National Grid completed public notifications per the requirements of Rule 7.07 B of the [Remediation Regulations](#) for sites located in an EJ Focus Area. Specifically, this included distribution of the following materials:

- “What is DEM?” fact sheet (provided by RIDEM);
- “Brownfield’s, Turning Bad Spaces Into Good Ones” (provided by RIDEM); and
- a Site-specific fact sheet.

Additionally, signs were clearly posted at the entrance gates at the ends of Tidewater and Merry streets, which included important Site-specific information, such as contact information and how to obtain additional information about the Site. Per the EJ Focus Area

guidance, these materials were provided in both English and Spanish. RIDEM reviewed the information distributed per the EJ Focus Area guidance prior to mailing and posting. Copies of the notification packages, which have been submitted since 2008, and information included on the signs posted at the Site entrance gates, are included in [Exhibit I](#).

Since February 2010, National Grid has prepared monthly status reports and submitted them to RIDEM, per RIDEM's request. The reports summarize the investigations and response actions completed for the Site and anticipated future response activities and schedule. RIDEM posts these status reports to its Site-specific website (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>).

During the completion of the gasholder decommissioning and demolition activities, performed in 2010, National Grid developed a Fact Sheet and circulated it by hand to abutting property residents of the neighboring apartment complex and charter schools in September 2010. The Fact Sheet included a brief history of the Site and a summary of the major activities expected to occur during the gasholder dismantling project. A copy of this Fact Sheet is included in [Exhibit I](#). In addition, a meeting was held on November 4, 2010, at the Blackstone Academy Charter School located at 334 Pleasant Street, Pawtucket, Rhode Island. Officials of the International Charter School (ICS) and Blackstone Academy Charter School, school parents, RIDEM officials, National Grid and GZA attended the meeting. A follow-up meeting was also held at the same location on December 7, 2010. These meetings included discussions on the progress and plans to complete the gas holder decommissioning and demolition activities. Concerns raised by members of the community related to air quality monitoring, dust, noise and truck traffic were also discussed and addressed as part of project completion.

Following the November 2010 meeting, RIDEM established a link on its website's homepage ([see Section 4.40](#)) for the "Former Tidewater Coal Manufactured Gas Site (Pawtucket)". This website includes electronic copies of all recently submitted documents for the Site. Because all reports are not electronically available, the site also includes instructions on how to obtain copies of all Site-related documents.

Per RIDEM's request, on November 24, 2010, National Grid also initiated the submission of weekly project updates to RIDEM. National Grid typically submits these updates electronically to RIDEM on Fridays, summarizing anticipated investigation and response actions to be performed for the following week. RIDEM then posts these updates on its website. Since April 2012, National Grid has submitted its updates on a biweekly schedule given the current low frequency of investigation and response action activities at the Site. National Grid will increase the frequency of the updates when more active activities are undertaken at the Site.

National Grid also established a public repository in May 2011 at the Pawtucket Public Library, located at 13 Summer Street, Pawtucket, Rhode Island. On a monthly basis,

electronic copies of the documents posted on RIDEM's website are provided on CD to the library repository. National Grid included a notification about the availability of documents at the public repository in the May 27, 2011 weekly update to RIDEM.

In August 2012, GZA, on behalf of National Grid, walked the neighborhood to distribute door-knob flyers informing people how to join the mailing list. This walk included the residences within the neighborhood area, as shown in the attached [Figure 3](#) – Door-to-Door Notification Area.

In September 2012, National Grid installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. Weekly updates submitted to RIDEM will be posted to the bulletin boards, as well as how to find all submitted documents and how to receive more information about the Site. Site contact information is also posted to the bulletin boards. During active earth disturbing activities, air monitoring data will be posted on the bulletin boards. Additionally, on a daily basis during earth disturbing activities, a color coded system will be used to indicate whether any active excavation is occurring.

In September 2012, National Grid, RIDEM and GZA conducted a meeting with interested persons regarding public concerns about the upcoming electrical substation upgrades. As a result of this meeting, GZA prepared a summary memorandum dated September 28, 2012 describing the air quality monitoring program implemented during earthwork activities associated with the electrical substation upgrade project. The memo can be found in the Information Repositories listed in [Section 4.40](#).

In October 2012, National Grid notified recipients of the mailing list in regards to several public involvement tools that have been made available. The notification announced the availability of the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)), phone message alert system and the bulletin boards. The notification presented how to sign up for the mailing list, emailing list and the phone message alert system.

In November 2012, National Grid notified recipients of the mailing lists that the draft *PIP* was available for review and comment. The notification also presented a tentative schedule for a public meeting to discuss the draft *PIP*.

In January 2013, National Grid notified recipients of the mailing lists that the draft *PIP* meeting would be held on January 29, 2013. The purpose of this public meeting was to discuss public comments to the draft *PIP*.

The public meeting to discuss the Draft *PIP* was held on January 29, 2013 and included a presentation by National Grid and GZA on the draft *PIP* and a summary of the public involvement components. National Grid responded to written questions received to date and then responded to questions or comments from people who attended. A summary of this meeting was submitted to RIDEM on February 15, 2013. A copy of the meeting

summary is included in Exhibit IV as an attachment to the formal Response to Comments dated March 22, 2013.

National Grid received a notification letter from RIDEM on February 21, 2013 to provide written responses to written comments received by RIDEM. A formal Response to Comments Letter was submitted to RIDEM on March 22, 2013 and is included as Exhibit IV. This response to comments also included updates to comments from the public discussed at the January 29, 2013 public meeting and responses to comments received in an email on March 6, 2013.

In March 2013, recipients of the mailing lists were notified that National Grid planned to host a Community Outreach Session to be held on March 27, 2013 at the Francis J. Varieur Elementary School. An updated Fact Sheet, dated February 2013, was also included with the notification package. National Grid provided this notification and updated fact sheet in English, Spanish and Portuguese. GZA, on behalf of National Grid, walked the neighborhood to distribute door-knob notification of the proposed Community Outreach Session and the updated Fact Sheet, all provided in English, Spanish and Portuguese. This walk included the residences within the neighborhood area, as shown in the attached [Figure 3](#) – Door-to-Door Notification Area. National Grid distributed additional copies of this notification and fact sheet to the principals at the Varieur Elementary School, Blackstone Academy Charter School and International Charter School on March 6, 2013 to be sent home with the students via backpacks. In addition, National Grid, with input from the principals of the three schools and community members, developed a flyer to announce the Community Outreach Session. This flyer was translated to Spanish and Portuguese and distributed to all three schools and posted on the bulletin boards on March 20, 2013.

National Grid held a community outreach session on March 27, 2013. The intent of this session was to present information regarding the Site in an informal poster-board type setting. Posters included:

- a description of RIDEM's Site Remediation program;
- Site history;
- details regarding Site investigations;
- details regarding utility operations at the Site;
- details regarding public involvement tools;
- nature and extent of environmental impacts, including characteristics of contamination and proposed remedial approach for the Site;
- A demonstration was conducted of air monitoring equipment used during the substation upgrade project at the Tidewater Site; and
- A slideshow was shown with photographs of various areas of the Site.

The posters were staffed by National Grid and GZA representatives who answered the public's questions on a one-on-one basis. Representatives were available from RIDEM to

answer questions on the regulatory process. This community outreach session was held at the Francis J. Varieur Elementary School.

In June 2013, National Grid notified recipients of the mailing lists that a supplemental investigation work plan was available for review and comment. The work plan was developed to investigate soil gas quality in both the interior portion of the Site and along the perimeter of the Site in response to comments received by the public. The notification also presented a tentative schedule for sampling.

National Grid received a notification letter from RIDEM on August 1, 2013 to update and finalize the PIP and to update the formal response to comments that was provided to RIDEM on May 22, 2013.

#### **4.00 PUBLIC INVOLVEMENT PLAN**

This section describes the elements of the [PIP](#) to be implemented for the Site that were developed based on the applicable requirements of Rule 7.07 A, B, C and D of the [Remediation Regulations](#). This *PIP* has been prepared to establish procedures for formal public and community communications relative to the implementation of planned investigations and remedial efforts at the Site. This *PIP* is considered to be a “living” document and may be revised or amended whenever necessary during the course of the remedial process.

A contact list for National Grid, GZA and RIDEM personnel associated with the Site is presented in [Exhibit II](#), in the “[Key Things to Remember](#)” portion of this *PIP* and on the title page.

#### **4.10 PUBLIC NOTICE**

Rule 7.07A of the [Remediation Regulations](#) requires public notice at two points during the Site Investigation process:

1. Prior to conducting Site Investigation field activities at a known contaminated site; and
2. Prior to the formal departmental approval of the [SIR](#) (in the form of the [Remedial Decision Letter](#)).

As described in [Section 3.00](#), National Grid provided public notice in the form of letter mailings prior to performing Site investigation activities in 2008. With respect to the second notification step, upon receipt of a [Program Letter](#) from the Department, National Grid will provide written notification to all abutting property owners, tenants, easement holders and the City of Pawtucket. This written notification will include a brief summary

of investigation findings, a description of the proposed Site remedy, and information on where the public can access and review the [SIR](#). As part of this post-*SIR* notification process, there is a 14-day public comment period, commencing with the date of delivery of the public notice, during which the public may review RIDEM records pertaining to the Site and submit written comments regarding the technical feasibility of the preferred remedial alternative. Since the Site is located in an EJ Focus Area, this public notice will be prepared and provided in English, Spanish and Portuguese with a translation header in multiple languages stating: “This is an important notice. Please have it translated.”

National Grid established a mailing list for the former Tidewater Site. The list includes, as described in Rule 7.07A of the [Remediation Regulations](#), abutting property owners, tenants, easement holders, municipalities and any community well suppliers associated with any well head protection areas that encircle the contaminated Site. In addition, this mailing list includes members of the Tidewater Stakeholders Group, the Pawtucket Development Office and other interested parties, as well as the principals of the neighboring schools (charter schools and public school) for dissemination to teachers and parents. Interested parents can go to the Tidewater/National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) to sign up for updates. National Grid will use the mailing list to announce upcoming public meetings and distribute fact sheets and other information about the Site. In addition, National Grid will use the list to distribute information regarding reports and other documents added to the repository. National Grid also developed a “Tidewater Environmental Project” mailing label to clearly identify correspondence related to the project.

Members of the mailing list, as well as other interested parties, have the option to receive information via email. In addition, status updates will be posted to the informational bulletin boards ([refer to Section 4.20](#)) when they are placed in the repository. National Grid will also email the distribution list when significant field activities begin and as planned field activities may change.

All written public comments related to documents submitted to RIDEM, as well as National Grid’s response, will be documented in written form. A copy of responses will be placed in the Information Repositories ([see Section 4.40](#)). In addition, GZA will send a notice announcing the availability of the summary to the Site’s mailing and email recipient lists.

#### 4.20 FACT SHEETS AND ENHANCED COMMUNICATIONS

As indicated in [Section 3.00](#), National Grid previously prepared and distributed fact sheets prior to both the Site investigation activities and initiation of the former gasholder decommissioning effort, which was completed in 2011. In addition, National Grid distributed facts sheets about the planned electrical substation upgrade project, scheduled to begin in mid-October 2012. Since the Site is located in an EJ Focus Area, these fact sheets were provided in both English and Spanish. Copies of these fact sheets are provided in [Exhibit I](#).

More recently, and consistent with the requirements of Rule 7.07B of the [Remediation Regulations](#), National Grid prepared and distributed an updated Site-specific fact sheet in March 2013. This fact sheet includes the known history of the Site, the contamination characterized at the Site (based on historical uses and existing environmental information), information about public involvement activities, the Site's status in the regulatory process and the expected path forward, and the National Grid project manager's contact information. This fact sheet was provided in English, Spanish and Portuguese; a copy is included in Exhibit I. National Grid will update this fact sheet in the event new information is developed and/or significant project milestones are achieved. These milestones will include receipt of the [Program Letter](#) from the Department, receipt of a [Remedial Decision Letter](#) from the Department, Department approval of the [RAWP](#) with a [Remedial Approval Letter](#), initiation of Site remediation and remedy completion. These fact sheets will be disseminated to those on the mailing/emailing list. Going forward, these fact sheets will continue to be provided in English, Spanish and Portuguese.

In addition, informational bulletin boards have been installed at the end of Tidewater Street and at the end of Bowles Court. The bulletin boards will include certain information distributed through the mailing list, as well as weekly updates during remedial work. National Grid will also use the bulletin boards to announce public meetings, distribute fact sheets and communicate availability of reports. Additionally, on a daily basis during earth disturbing activities, a color coded system will be used to indicate whether any active excavation is occurring. Please note that if significant vandalism to the bulletin boards occurs, National Grid will look into alternative ways to share information.

National Grid has also established a phone message network to distribute time-sensitive information to interested parties. For example, National Grid will notify members of the phone message network if there are sustained exceedances of the monitored air compounds during active earth disturbing activities.

#### 4.30 COMMUNITY MEETINGS

Per Rule 7.07C of the [Remediation Regulations](#), an Initial Community Meeting will be held. The objective of the meeting will be to:

- disseminate information regarding the Site and RIDEM's Site Remediation program;
- document public comments and concern about the investigation and remediation of the Site; and
- engage in a dialogue with the community about the Site.

It is anticipated that the initial community meeting will be held after receipt of the Department's review comments on the [SIR](#). We currently anticipate this initial community meeting will be held at the Francis J. Varieur Elementary School, located at 486 Pleasant

Street in Pawtucket, Rhode Island, or the Blackstone Valley Visitors Center Theatre, located at 175 Main Street, in Pawtucket, Rhode Island. To accommodate participants, National Grid will schedule this meeting in the evening. Per Rule 7.07C, National Grid encourages equal participation by all to create an atmosphere of constructive, open dialogue.

National Grid is also planning to arrange for a limited tour of the Site prior to the start of remediation. Given the active utility operations, such as the electrical substation and natural gas regulating station on the property, portions of the site will not be accessible to the public due to safety concerns.

In addition to the initial community meeting, National Grid will schedule subsequent community meetings in conjunction with the following project milestones:

- Preparation of the draft [\*Remedial Action Work Plan\*](#) (RAWP);
- prior to remedy implementation; and
- remedy completion.

In addition, community meetings will be held during remedy implementation. The frequency of these meetings will be determined after the final remediation schedule has been developed and approved by RIDEM. At all public meetings, translation assistance will be provided for non-English speaking individuals, upon request.

National Grid will submit a written summary of all public meetings to RIDEM in hard copy and electronic format within 20 days of the meeting. In accordance with Section 7.07C, the meeting summaries will include:

- identification of the main issues of concern to the community;
- document requests by the public for a continued dialogue (including form and frequency); and
- proposed responses to the identified community issues through action items and schedules.

**Table 1 Anticipated Public Meetings**

<b>Meeting</b>	<b>Objective</b>
Initial Community Meeting	Present the results of the <a href="#">Site Investigation Report (SIR)</a> to the public and solicit public comments in regards to the Site Investigation
Public Meeting on draft <a href="#">RAWP</a>	Solicit public comments and questions on draft <a href="#">RAWP</a>
Public Meeting prior to initiation of remedy	Solicit public questions or concerns regarding the remedy
Public Meetings on an As-Needed Basis during remedial activities	Keep the public informed and discuss any questions or concerns, and present a meeting schedule for discussion.
Public Meeting upon completion of the remedy	Solicit public questions or concerns following completion of remedial activities

#### 4.40 INFORMATION REPOSITORIES

National Grid will provide Site-specific information to the public by establishing information repositories; developing and maintaining a mailing list to distribute information about the Site; providing advance notification to the Site mailing list about Site activities; and providing and updating fact sheets. The following describes the methods by which National Grid will make Site-related investigation and remediation information available to the community. See [Table 2](#) – Communication Tools for more information.

Publicly Accessible Site File: Files related to the former Tidewater Site are maintained at RIDEM’s Office of Waste Management filed under Former Tidewater Coal Gasification Plant (Pawtucket), RIDEM Case No. 95-022. The files contain all documents pertaining to the Site. Appointments to view the files can be made by contacting RIDEM, Department of Technical and Customer Assistance, 235 Promenade Street, Providence, Rhode Island (telephone: 401-222-4700 extension 7307). Additional information regarding file reviews at RIDEM can be found at <http://www.dem.ri.gov/topics/filerevw.htm>.

Publicly Accessible Document Listing Website(s): Certain documents related to the investigation and remediation of the Former Tidewater Site are maintained at the website operated by the RIDEM. The document listing website contains publicly available submittals pertaining to the Site dating back to 2007. RIDEM-required regulatory submittals will be sent to RIDEM for subsequent posting to the website, including:

- work plans;
- sampling and field testing plans;
- technical reports and documents summarizing results and recommendations;
- relevant correspondence;
- press releases;
- public information materials;
- updates to the PIP;
- public meeting summaries;
- summaries of responses to comments received; and
- copies of public notices about the Site.

In the future, National Grid will provide simple executive summaries for major reports that are submitted to RIDEM for subsequent posting to the website. The website is accessible at <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>. National Grid also submits electronic copies of documents posted on this website to the Local Information Repository on a monthly basis.

In addition to the RIDEM website, National Grid has established a website for the Site ([www.tidewatersite.com](http://www.tidewatersite.com)). This website provides the public with timely updates on current and proposed activities at the Site. The following information is included (or will be included as it is developed):

- the nature and history of MGPs;
- history of the Tidewater facility;
- description of the Tidewater Site and regulatory background;
- access to key project documents (e.g., major reports; work plans; sampling and field testing plans; technical reports; documents summarizing results and recommendations; and simple executive summaries of major reports);
- relevant correspondence;
- press releases;
- updates to the PIP;
- public meeting summaries;
- summaries of responses to comments received;
- copies of public notices about the Site;
- public announcements;
- status update archive; and
- Site contacts.

Availability of the website will be posted on RIDEM's website, on signage at the Site and disseminated through the Site mailing list. When applicable, such as during active work times and remediation activities, summaries of certain air monitoring data (e.g., total volatile organic compound screening data, dust monitoring data and analytical data) will be posted on the Tidewater/National Grid website on a weekly basis.

Local Information Repository: To provide the community with easy access to information relevant to the Site cleanup process, a local repository has been established at the following location:

Pawtucket Public Library, 13 Summer Street, Pawtucket, Rhode Island (telephone: 401-725-3714)

The local information repository contains copies of those submittals included on the RIDEM website listed above. As previously indicated, electronic copies (on a CD) of these submittals are sent to the repository on a monthly basis. National Grid provides all submittals to the repository in electronic form only. Upon request, National Grid will provide hard copies of the material for inclusion in this repository.

Pawtucket Public Library hours are Monday through Thursday, 9 a.m. to 8:45 p.m.; and Friday and Saturday, 9 a.m. to 4:45 p.m.

In addition, certain information will also be posted on the bulletin boards, including the location of the repositories, site updates and site contact information.

**Table 2 Communication Tools**

<b>COMMUNICATION TOOLS</b>		
Information Repositories	Pawtucket Public Library	13 Summer Street, Pawtucket, RI The local information repository at the Pawtucket Public Library contains copies of submittals included on the RIDEM website. Electronic copies of these submittals are sent to the repository on a monthly basis.
	National Grid Tidewater Website	<a href="http://www.tidewatersite.com">www.tidewatersite.com</a> The website provides the public with timely updates on current and proposed activities at the Site. In addition, this website includes information about the Tidewater site and a document archive for the Site.
	RIDEM Tidewater Website	<a href="http://www.dem.ri.gov/programs/benviron/waste/tide.htm">http://www.dem.ri.gov/programs/benviron/waste/tide.htm</a> Certain documents related to the investigation and remediation of the Former Tidewater Site are maintained at the website operated by RIDEM.
	RIDEM File Review	235 Promenade Street, Providence, RI Files related to the former Tidewater Site are maintained at RIDEM's Office of Waste Management filed under Former Tidewater Coal Gasification Plant (Pawtucket), RIDEM Case No. 95-022 and are available upon request.
Distribution Lists	Email List	Interested parties have the option to receive information via email. National Grid will use the email list to announce upcoming public meetings, distribute fact sheets, availability of reports and other information about the Site. National Grid will also email the distribution list when significant field activities begin and as planned field activities may change.
	Mailing List	National Grid established a mailing list for the former Tidewater Site. The list includes abutting property owners, tenants, easement holders, municipalities and any community well suppliers associated with any well head protection areas that encircle the Site, as well as parties who have previously provided their mailing address to National Grid. National Grid will use the mailing list to announce upcoming public meetings, distribute fact sheets, availability of reports and other information about the Site.
	Phone Message Alert System	National Grid has established a phone message network to distribute time-sensitive information to interested parties.
Bulletin Boards	National Grid has installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. Weekly updates submitted to RIDEM will be posted to the bulletin boards, as well as how to find all submitted documents and how to receive more information about the Site. Site contact information is also posted to the bulletin boards. During active earth disturbing activities, air monitoring data will be posted on the bulletin boards. Additionally, on a daily basis during earth disturbing activities, a color coded system will be used to indicate whether any active excavation is occurring.	

See the [“KEY THINGS TO REMEMBER”](#) portion of this document to find out more about these communication tools.

## **5.00 FUTURE PLAN REVIEW AND AMENDMENTS**

National Grid may revise this [PIP](#) whenever necessary during the course of the remediation process. All revisions will be subject to review and approval by the Department and members of the public. If revisions are proposed, National Grid will prepare a draft revised *PIP* for review and approval by the Department and members of the public. A final revised *PIP* will then be placed in the information repositories and a notice of its availability will be sent to the Site’s mailing and email lists. A summary sheet of all RIDEM-approved changes to the *PIP* is provided as Exhibit V.

## **6.00 RESPONSIBILITIES FOR IMPLEMENTING PUBLIC INVOLVEMENT ACTIVITIES**

In accordance with the [Remediation Regulations](#), implementation of public involvement activities as described herein is the responsibility of National Grid. GZA will be conducting public involvement activities in support of National Grid. These activities are generally those designed to provide the public with information regarding remedial response actions. They include providing copies of reports to local officials and information repositories, mailing notices of meetings and the availability of Site reports, notifying local officials and residents of any proposed environmental work on the Site and providing an update on the status of the Site to local officials and residents. GZA will also assist National Grid in obtaining and responding to public comments on proposed remedial response actions.

Joseph Martella of RIDEM is responsible for addressing situations in which RIDEM receives complaints from the community members about the manner in which the [PIP](#) activities are being conducted.

## **7.00 SCHEDULE OF PIP ACTIVITIES**

The [PIP](#) specifies the milestones during remedial response activities when public involvement activities will be conducted. [Table 3](#) provides a schedule for public involvement activities.

**Table 3 Schedule of Public Involvement Activities**

ACTIVITY	TIME PERIOD
Initial Community Meeting	Within 60 days of receipt of <a href="#">Program Letter</a> – during <a href="#">SIR</a> Public Comment Period
Public Meeting on DRAFT <a href="#">RAWP</a>	Within 12 months of receipt of <a href="#">Remedial Decision Letter</a>
Submit <a href="#">RAWP</a> for RIDEM Approval	Within 6 months of DRAFT RAWP Meeting
Public Meeting prior to initiation of remedy	Minimum of 30 days prior to start of remediation
Public Meetings during remediation	Meeting schedule to be presented for discussion purposes once remedial schedule is developed and approved by RIDEM
Public Meeting upon completion of the remedy	Within 30 days following completion of remediation

Notice to Abutter  
Sediment Sampling  
Tidewater Manufactured Gas Plant (MGP)  
& Pawtucket No. 1 Power Station Site  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

INDUSTRIAL

Date:  
June 30, 2008

Dear Abutter:

Contact:  
Mark Mahoney

The purpose of this is to notify you that The Narragansett Electric Company d/b/a National Grid (National Grid) will be conducting sediment coring in the Seekonk River adjacent to the former Tidewater Manufactured Gas Plant (MGP) and the Pawtucket No. 1 Power Station Site located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners and tenants in accordance with requirements established in the Rhode Island Department of Environmental Management's (RIDEM) Rules and Regulation for the Investigation and Remediation of Hazardous Materials (Remediation Regulations). Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

Phone:  
978.921.0042

Email:  
Mark.Mahoney@Arcadis-US.com

Our ref:  
B000036697

The purpose of the upcoming sampling is to investigate sediment conditions along the Seekonk River which may have been impacted by the historical operation of the adjacent Site as a manufactured gas plant. The proposed work is projected to take 2 to 3 weeks, with an estimated start date of July 7, 2008. These investigation activities will be conducted in accordance with RIDEM's Remediation Regulations and will be performed by ARCADIS on behalf of National Grid.

Imagine the result

If you would like more information, please contact Michele Leone of National Grid at 508-389-4296.

Sincerely,

A handwritten signature in blue ink, appearing to read "Mark T. Mahoney". The signature is fluid and cursive, with a long horizontal stroke at the bottom.

Mark T. Mahoney  
Vice President

Dear Abutter:

The purpose of this letter is to notify you that The Narragansett Electric Company d/b/a National Grid (National Grid) will be conducting environmental investigation activities at the former Tidewater Manufactured Gas Plant (MGP) and the former Pawtucket No. 1 Power Station Site located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners and tenants in accordance with requirements established in the Rhode Island Department of Environmental Management's (RIDEM) *Rules and Regulation for the Investigation and Remediation of Hazardous Materials* (Remediation Regulations). Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

The purpose of the upcoming investigation is to further investigate impacts associated with the historical use of the Site. The investigation will include surface soil sampling, subsurface soil sampling (via soil borings and test pits) and groundwater sampling (via monitoring wells). The field activities are scheduled to commence on or about May 3, 2010, and will occur over an approximate 2 to 3 month period. These investigation activities will be conducted in accordance with RIDEM's Remediation Regulations and will be performed by GZA GeoEnvironmental, Inc. (GZA) on behalf of National Grid.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651.

Very truly yours,

GZA GeoEnvironmental, Inc.

Margaret S. Kilpatrick  
Senior Project Manager

Fax: 401-751-8613  
<http://www.gza.com>

Estimado vecino:

El propósito de esta carta es notificarle que la Compañía Eléctrica Narragansett, haciendo negocios bajo el nombre National Grid, realizará actividades de investigación ambiental en la planta anteriormente llamada Tidewater Manufactured Gas Plant (MGP) como así también en la planta anteriormente llamada Pawtucket. No. 1 Power Station Site, ambas situadas al final de las calles Tidewater y Merry en Pawtucket, Rhode Island. Conforme con los requisitos establecidos en las Reglas y Regulaciones para la Investigación y la Remediación de Materiales Peligrosos (Regulaciones sobre la Remediación) (Rhode Island Department of Environmental Management's (RIDEM) Rules and Regulation for the Investigation and Remediation of Hazardous Materials), este aviso se proporciona a los dueños y a los arrendatarios de propiedades linderas. Si usted es el dueño de una propiedad que está siendo arrendada le solicitamos que proporcione una copia de esta carta a sus arrendatarios.

El propósito de la investigación a realizarse próximamente es investigar más detalladamente los impactos asociados al uso histórico del lugar. La investigación incluirá el muestreo superficial del suelo, el muestreo subsuperficie del suelo (por medio de perforaciones del suelo y trincheras de prueba) y el muestreo del agua subterránea (vía la supervisión de pozos). Las actividades de campo están programadas para comenzar aproximadamente el 3 de mayo de 2010, y transcurrirán en un período aproximado de 2 a 3 meses. Estas actividades de investigación serán conducidas de acuerdo con las regulaciones de la remediación de RIDEM y realizadas por GZA GeoEnvironmental, Inc. (GZA) en nombre de National Grid.

Si usted necesita más información o tiene preguntas, por favor contacte a Michele Leone de la National Grid en 781-907-3651.

Sinceramente suya,

GZA GeoEnvironmental, Inc.

Margaret S. Kilpatrick  
Directora Principal de Proyecto

cc: Joe Martella, RIDEM  
Michele Leone, National Grid

## **Tidewater Site Fact Sheet; March 2010**

### **Former Tidewater MGP and Electric Generation Site**

#### **Background**

From the 1880's through roughly the 1970's, a manufactured gas plant (MGP) and electric generation facility operated adjacent to the Seekonk River at the end of Merry and Tidewater streets in Pawtucket, Rhode Island. The Tidewater MGP used industrial processes to produce gas from coal and oil. The gas was used primarily for the same purposes that natural gas is used today. MGPs, which were common throughout the northeast before the region's natural gas pipelines were built, often yielded by-products of the gas production process such as tars, sludges and oils. The Tidewater electric generation facility used coal, oil, tar and other substances to produce electricity. Some of these substances have remained in the environment at facilities such as these after they were closed down.

The gas manufacturing and electric generating operations at the Tidewater facility were terminated in 1968 and 1975, respectively. Today, National Grid continues to operate a natural gas regulating and interchange station on the north portion of the property and an electrical substation and switch house on the south portion of the property.

#### **Site Evaluation**

National Grid has previously conducted environmental assessment activities at the former Tidewater Site and surrounding properties, including the Francis J. Varieur School and Max Read Field. The assessment included evaluating soil, groundwater and sediments for MGP and electric generation by-products. The evaluation indicated that residuals are present and are mainly detected on National Grid property and a portion of a fenced, wooded City-owned property located south of the National Grid property.

Data from the previous assessments indicate that the substances detected on the school and surrounding properties are below the Rhode Island Department of Environmental Management's (RIDEM's) residential standards and/or are representative of background concentrations found in the Pawtucket area. A limited area with an exceedance of RIDEM's standards was found below more than two feet of clean fill on the far eastern portion of Max Read Field. This area poses no risk to the general public. All other portions of the school and athletic fields were not impacted by the former MGP and electric generation operations.

#### **Next Steps**

National Grid is working with GZA GeoEnvironmental, Inc. (GZA), an environmental consulting firm from Providence, Rhode Island, and RIDEM on an environmental assessment and remediation program for the Tidewater Site. National Grid plans to perform additional environmental assessment activities this spring to gather sufficient data to develop remedial alternatives at the Site. The activities to be conducted this spring will include the collection of surface and subsurface soil samples via test pits and soil borings, the installation of groundwater monitoring wells, and the collection of groundwater samples. The test pits will be excavated using a rubber-tired backhoe and the soil borings will be advanced using a truck-mounted drill rig. All activities will be limited to the National Grid properties, will take place during normal working hours, and should have no impact beyond the Site property boundaries. Air monitoring of the work areas will be conducted during these activities.

In addition, National Grid will begin activities related to the demolition of the two former gas holder structures this spring. The initial activities will include removal and treatment of water from the holders. Following the dewatering activities, National Grid anticipates demolishing the holder structures in the summer and fall of 2010.

#### **Schedule**

These assessment activities are anticipated to begin in April and will likely take two to three months to complete. The holder demolition activities are anticipated to begin in the summer of 2010 and take approximately 4 months to complete.

#### **Questions and Comments**

If you would like more information on National Grid's activities at the site, please contact Michele Leone from National Grid at 781-907-3651.

## **Sitio del las antiguas planta de gas (MGP) y planta de generación eléctrica**

### **Antecedentes**

Desde 1880 hasta aproximadamente 1970 operaron en la vecindad del río Seekonk, al final de las calles Merry y Tidewater en Pawtucket, Rhode Island, una planta de gas y una planta de generación eléctrica. La planta de gas Tidewater, mediante procesos industriales, producía gas usando carbón y petróleo. Este gas se utilizaba para los mismos propósitos que el gas natural se usa en la actualidad. Las plantas de gas, o MGP, las que eran comunes en la región noroeste antes de la construcción de las redes de gas, frecuentemente producían subproductos tales como alquitrán, fangos y aceites. La planta de generación eléctrica Tidewater utilizaba carbón, petróleo, alquitrán y otras sustancias para producir electricidad. Algunas de estas sustancias han quedado en el medio ambiente, lo que es típico en este tipo de plantas y posteriormente a su desactivación.

La planta de generación de gas dejó de operar en 1968, mientras que la planta generadora de electricidad dejó de operar en 1975. En la actualidad, National Grid continúa operando una estación de intercambio y regulación de gas, en la parte norte de la propiedad, mientras que en la parte sur de la propiedad opera una sub-estación eléctrica y una estación interruptora.

### **Evaluación del sitio**

National Grid condujo previamente actividades de evaluación ambiental en el sitio anteriormente ocupado por Tidewater y en las propiedades linderas, incluyendo la Escuela Francis J. Varieur y el Campo de Deportes Max Read. Estas actividades incluyeron evaluaciones del suelo, del agua subterránea y de sedimentos, en busca de sub-productos generados por la MGP y la generación de electricidad. La evaluación indica la presencia de residuos, mayormente en el terreno perteneciente National Grid y en una porción de la propiedad arbolada y alambrada que pertenece a la Ciudad y que está situada al sur del terreno perteneciente a National Grid.

Información recolectada en la evaluación ambiental previamente realizada indica que las sustancias detectadas en la Escuela y las propiedades linderas están por debajo de los valores estándares para zonas residenciales del Departamento de Manejo Ambiental de Rhode Island (Rhode Island Department of Environmental Management, RIDEM) y/o son representativas de las concentraciones normales características de la zona de Pawtucket. Un área limitada, con valores que exceden los valores estándares de RIDEM, se encontró a una profundidad de más de dos pies, bajo una capa de suelo de relleno no contaminado, en la porción más alejada de la zona este del Campo de Deportes Max Read. Esta zona no posee riesgo para el público general. Las zonas restantes de la Escuela y del Campos de Deporte no han sido impactadas por las antiguas planta de gas MGP y planta de generación eléctrica.

### **Próximos Pasos**

National Grid está trabajando conjuntamente con GZA GeoEnvironmental, Inc. (GZA), una consultora ambiental localizada en Providence, Rhode Island y RIDEM, en un asesoramiento ambiental y un programa de remediación para el sitio de Tidewater. Esta primavera, National Grid planea realizar estudios ambientales adicionales con el objetivo de obtener datos suficientes para desarrollar alternativas de remediación en el lugar. Las actividades a ser realizadas esta primavera incluirán muestreos superficiales y sub-superficiales del suelo usando perforaciones del suelo y trincheras de prueba, la instalación de pozos de monitoreo de agua subterránea, y la colección de muestras de agua subterránea. Las trincheras de prueba serán excavadas usando una retroexcavadora, mientras que las perforaciones del suelo serán realizadas usando una excavadora montada en un camión. Todas estas actividades serán realizadas dentro de la propiedad de National Grid, tomarán lugar en horarios de trabajo normales, y no deberían tener impacto fuera de los límites del lugar. Durante estas actividades se realizaran monitoreos de la calidad del aire.

Adicionalmente, esta primavera, National Grid comenzará a demoler dos antiguos contenedores de gas. Las actividades iniciales incluirán el tratamiento y remoción del agua de los contenedores. Seguidamente de las actividades relacionadas con la remoción del agua, National Grid anticipa que la demolición de las estructuras de los contenedores de gas será realizada en el verano del 2010.

### **Programa de Actividades**

Se anticipa que estas actividades de evaluación comenzarán en abril y probablemente se completarán en el transcurso de dos hasta tres meses. Se anticipa que las actividades relacionadas con la demolición de los contenedores de gas comenzaran en el verano del 2010 y se completaran en aproximadamente 4 meses.

### **Preguntas y Comentarios**

Si usted necesita más información con respecto a las actividades de National Grid en el Sitio, por favor contacte a Michele Leone de la National Grid en 781-907-3651.

# What is a Brownfield?

This booklet is about unused or abandoned (*a BAN dund*) buildings and places called **Brownfields**. They are dirty, sometimes dangerous places in neighborhoods. Usually Brownfields are places where old factories or other businesses were. Many times they are very messy and trashy places.

Brownfields can have all kinds of dangers – mess, falling down buildings and even dangerous, **toxic** (*Tok sick*) chemicals. Toxic means these chemicals are dangerous to human health. When a Brownfield is cleaned up, neighborhoods are better places in so many ways.

All around the country Brownfields are being cleaned

up and **redeveloped** (*re da VEL upt*) – turned into better, cleaner places – new businesses, parks and other uses. This booklet will explain what you need to know to get involved and ask good questions about Brownfield **reuse and redevelopment**.

The more you know about a Brownfield site then the more you can take part in planning. For example, let's say a Brownfield site is going to be redeveloped into a school with a community playground. Residents can get involved to help decide:

- **Is this plan for redevelopment and reuse good for the neighborhood?**
- **Is the new place going to be safe for neighborhood people?**

## Why can Brownfields be dangerous places?

### #1 Dangers you can see

There are two kinds of dangers or **risks** at Brownfield sites – things you can see, and things you can't see. Things you can see, like broken windows and glass, rotted wood floors, rusty nails and pipes, and old barrels, are a problem. All of these things are dangerous. Children playing

at an old Brownfield site have the most risk to get hurt. They can find old underground storage tanks, and they can fall in.

### #2 Dangers you can't see

Chemicals can be at a Brownfield and you can't see them. **Some chemicals can be dangerous to human health**. They can be toxic. Toxic chemicals can make people sick if they eat them, breathe them or get them on their skin.

# Chemicals

## Where did the chemicals come from?

Sometimes when factories or businesses left a place, they left chemicals in pipes, barrels and buried oil tanks. These can leak. When they leak (or *leach*) into the ground, the chemicals can get into the soil and into well water and river water. Scientists test to see if the soil and water are safe.

## When is a chemical dangerous?

Think of this: **chemicals are everywhere and in everything we eat and drink.** Our own bodies are made up of chemicals. And most chemicals are natural and safe. **But some chemicals, in the right amounts, can be dangerous.**

Old businesses can leave behind dangerous chemicals. For example, an old dry cleaning business can leave dangerous **VOCs**—volatile (*vo la TILE*) organic compounds—in the ground. VOCs are chemicals that can get into the air that we breathe.

## Testing chemical levels—how much do they find?

If chemicals are in everything, how do the experts know what to test for?

Scientists often will test the soil and the water for chemicals. If they know what type of business was

there before, this will help scientists decide what to test for. Some of these tests are **very expensive**. So, they do the basic tests first. They may do more tests after they look at the first results.

To do the tests scientists dig holes, or **test wells**, into the ground and take samples of the water in the ground.

Understanding chemicals		
Chemical Tested	Everyday/Household Use	Business/Industry Use
Pesticides . . . . .	Roach powder . . . . . Rat poison	Farming or chemical company
VOC's . . . . .	Gasoline . . . . . Dry cleaners Moth balls	Oil refinery
Semi-volatiles . . . . .	Soot . . . . .	Incinerators
Metals . . . . .	Batteries . . . . . Thermometers	Jewelry or plating company

▲ This chart shows some of the kinds of chemicals that may be at a Brownfield site. In the *left* column is the name of the chemical. In the *middle* column you see how we use that chemical everyday, even at home. The *right* column shows what kinds of big businesses use these chemicals. This chart shows that there are many ways to use chemicals.

# Standards for chemicals: how much is too much?

When scientists test a Brownfield site (the ground or the water) they want to find out **how much** of a chemical there is. The government sets safe amounts or levels for chemicals. The safe level is called a **standard**. If they find a level that is **higher than** the safe standard, then they make plans to do something to keep people safe.

## What happens if a test is too high?

If the level is too high, scientists take action in different ways. Depending on the risk, they will do some or all of the following:

- Remove the contamination
- Cover it up
- Fence in the area
- Plant trees and grass
- Teach people about how to use an area
- Do more tests

Each Brownfield site is different, but the list above will give you a good idea of the kinds of actions that a contaminated site may need.

## How to understand standards

### Here is an example of a “standard.”

Let's say soil at a Brownfield site was tested for **lead**. The test level was **3,500 ppm** (parts per million). The EPA (Federal Environmental Protection Agency) action level is **400 ppm**. So, the level is **higher than the standard** (3,500 ppm is higher than 400 ppm). This means something needs to be done to be sure people can be safe at or near this Brownfield site.

# What is risk?

There is no such thing as living in a world with no risks. Even crossing the street can be risky. The important question is “**What is an acceptable risk?**” “**What is a risk I am willing to take?**”

Sometimes it’s hard to know what is a risk? Who is at risk? For example if children are playing in a crumbling building this can be a **high risk**. Children can fall, get cut or get seriously hurt. Another example is if the air is filled with dust. This may be risky for people with asthma or older people.

## Questions to ask about risk

- Is there a risk?
- Who is most at risk?
- What is the acceptable standard for this chemical?
- Is this standard for a normal size man or woman?
- Is this standard for a child?
- When can this chemical make me unhealthy?
- What could happen to me or my children?
- What about pregnant women?
- How would I know if I am sick from this chemical?
- If you say this level is safe here, does that mean this level is safe for every other place in the country?
- How can I protect myself – minimize the risk (keep the risk low)?
- How can I learn more about this risk? Who can I talk to?
- Is there something I can read?

**Remember! There is no such thing as living in a world with no risks. The important thing is to understand what the risks are.**

*Go to the back page of this booklet for a list of agencies and phone numbers you can use.*

## An example of standards

The safe standard dose of aspirin for the average adult is 2 aspirin every 4 hours. Some adults can take even more than 2 aspirin safely. But if you are a small child, 2 aspirin is way too much. The standard for adults (2 aspirin) is not **the standard** for children.

# You can get involved

## Residents know some important history

The past history of a site is important. Talk to the people

who have lived in the neighborhood for a long time. Maybe you are one of those people! People who worked in the facto-

ries and businesses may know what kinds of chemicals were used. This information will help the planners and scientists.

**B**rownfields get **redeveloped** into all kinds of different spaces – schools, businesses, playgrounds. Community people can help decide if the plan to build is a good one. As a resident, you can help decide:

- **Is this plan for redevelopment and reuse good for the neighborhood?**
- **Is the new place going to be safe for neighborhood people?**

There are 2 important times you can get involved with a Brownfield site:

### 1. Get involved when the city or developer is *planning* to cleanup, reuse or build something new at a Brownfield.

For example, a developer is planning to build a new business on an old brownfield site. It will have lots of hills and driveways to make it pretty. The developers think only adults will go to the business site. They want to follow cleanup standards for adults.

**But** neighborhood people know that the hills may attract lots of neighborhood children. This can be dangerous for kids. **The cleanup standards for adults may not be safe for children.** So you can give the developers good information. For example, you could ask them to make the land less inviting for kids.

Call or write your elected officials (*see sample letter and phone calls on pages 8 and 9*). Ask:

- **What is happening with this site?**
- **Are there plans to develop it?**
- **What are the plans?**
- **Will you hold any public meetings to talk about plans?**

## 2. Get involved with the cleanup plans.

The scientists and the contractors may schedule local meetings so that you can come and see and hear about the plans for cleanup. This is one of the times that you and your neighbors can be the most help and have the biggest impact. You can help decide if the plans for cleanup are good.

## Questions to ask about Brownfields cleanup in your neighborhood

**We have already talked about contamination and risk questions on page 4.**

- When will the job start? How will you tell the neighborhood?
- Will there be a lot of noise during the cleanup?
- Will any of the waste be treated on the site? Will any chemicals be released during cleanup?
- Is it safe to truck it through the neighborhood?
- Where is the waste being taken?
- What if some of it spills out?
- Will the site be dusty during cleanup?
- What is being done about dust control? Is the dust dangerous?
- Will the chemicals smell? Will the fumes be toxic?
- Who do I complain to if I see something I think is wrong?
- What kind of signs will be posted while the work is going on?
- Will the signs be in different languages? Will they have pictures?
- Will there be guards at the street crossings to help with the truck traffic?
- Will there be a night watchman at the place where the work is being done?
- Will the site be fenced off?

# What to expect during cleanup

Abandoned cars, used tires and other trash will need to be hauled away. Buildings and structures need to be taken down. Also, old fencing, asphalt parking lots and unused railroad lines will be removed. Metals, glass, boilers, old machinery and any of the

wooden pieces of the building will also be put into dumpsters and taken away to a landfill.

### Trucks

Machines will be digging holes and loading trucks. Large trucks will be traveling back and forth

over the local roads. So you want to know what is the time of day and what days of the week will they be working. Usually the contractor wants to start around **6:30 or 7:00 am** and work until **3:30 or 4:00 pm**. Unless there is a real rush to get the work done, they will work Monday-Friday. So you might ask the question, **“Do you plan to work any overtime on this project?”**

### **What streets will the trucks use?**

Find out what roads the trucks will be using. The people who plan these projects aren't always aware of the kinds of traffic that happen in your neighborhood. You know the local roads – where people walk and drive, and where children play. Maybe there are elderly or sick people on some streets. Usually the truck drivers have more than one choice about what roads they use. You can give them good information about the best routes.

### **How much truck traffic and how messy?**

The contractor should have an idea about how much dirt he needs to take out and bring in. So he can figure out roughly how many loads there will be – 1 truck per hour, 10 trucks per hour or something in between.

Trucks can get dirty. Ask, **“Are you going to have a wash down place for the trucks leaving the job?”** A wash down is a platform that the contractor builds and the trucks ride up on it. While the truck is on the platform, workers with hoses spray high-pressure water to clean the trucks before they go out onto the neighborhood roads. This keeps the mud on the job and keeps your neighborhood clean.

### **How long will the cleanup take?**

Most of the time the developers have a good idea how long the project will take before they

begin. But sometimes they are surprised by the things they find. Although the developers may not be able to give you an exact answer about when the job will be done, they should be able to give a best guess for an ending date.

### **Children and Brownfields**

Talk to your children about Brownfields and cleanup. Explain the dangers of playing at or near the site. **Remember truck drivers cannot see every spot around their trucks.** Tell your children:

- **Be extra careful when you cross streets.**
- **Don't play near the Brownfield.**

**Older people** should also be more careful. If you know of an older person in the neighborhood let them know that the noise and dust will only be temporary.

# Take action: write letters

This is a sample letter you can use to write to officials about a Brownfield site.

Turn to the back page to find the names and addresses of agencies and people.

To \_\_\_\_\_ (write name here)  
\_\_\_\_\_ (include address)

Date \_\_\_\_\_

Dear Mr./Ms. (write name here),

I am a resident of \_\_\_\_\_ Street and I am writing to express my concern about the traffic around the Valley Mills cleanup. The trucks begin at about 6:30 in the morning during the week. This is a **problem** for a number of reasons. We have older people living on this street, and children are also walking to school between 7:30 and 8:30 am.

I would like to **request** that two things happen. I believe the trucks should not start until 9:00 and stop at 4:30. Also, I believe Pine Street would be a better traffic pattern for the trucks entering and leaving the site.

I am eager to see the site cleaned up. But I am equally concerned that this cleanup is done in the best way for our neighborhood. Please call me at \_\_\_\_\_ (your phone number) or write to me at \_\_\_\_\_ (your address).

Thank you for your time.

Sincerely,

\_\_\_\_\_ (your signature)

\_\_\_\_\_ (Print your name clearly here)

◀ **1st paragraph:**  
What is the problem?

◀ **2nd paragraph:**  
What are you asking for?

◀ **3rd paragraph:**  
How can someone get in touch with you?

# Take action: make phone calls

## Phone call #1: Talking about truck traffic during the cleanup.

Turn to the back page to find the names and phone numbers of agencies and people.

**Resident:** Hello. I would like to speak to someone about the clean up of Valley Mills. I live in the neighborhood.

**Operator:** Just a minute please. I'll transfer you.

**Planner:** Hello. Can I help you.

**Resident:** Yes. I am calling about the truck traffic at the cleanup site of Valley Mills. My name is \_\_\_\_\_. I live in the neighborhood ◀ Say who you are. and I would like to talk about the truck traffic.

**Planner:** What seems to be the problem?

**Resident:** I think the trucks are starting too early in the morning and causing ◀ What is the problem? problems for older people. The trucks begin coming out of the site at 6:30 in the morning. This is much too early for this neighborhood. We have many older people living here and this traffic is a problem. I want the planners to ◀ What are you asking for? know that I am calling to say that the trucks should not start until 8:00 in the morning.

**Planner:** I will give the traffic manager your message.

**Resident:** Thank you. And who is the traffic manager? Could you please spell her name for me. Before we hang up I would like ◀ Get the person's name (write it down) your name. Please spell it for me. Also I would like to give you my name and phone number. I would like someone to call me back. (Give your name, spell it and phone number.)

Thank you very much and I will wait to hear from \_\_\_\_\_ (the traffic manager's name).

## Phone call #2: Finding out if there are any plans for a Brownfield site near you.

**Resident:** Hello. I would like to speak to someone about the empty building and vacant lot on Mills Street I live in the neighborhood.

**Operator:** Just a minute please. I'll transfer you.

**Planner:** Hello. Can I help you?

**Resident:** Yes. I am calling about the empty building and vacant lot on Mills Street. My name is \_\_\_\_\_. I live in the neighbor- ◀ Say who you are. hood and I would like to know if the city has any plans to redevelop or reuse this land. Who would know about this land? ◀ What are you asking for?

**Planner:** You will need to speak with Ms. James. Her phone number is \_\_\_\_\_.

**Resident:** Thank you. And can I have your name, please? ◀ Get the person's name (write it down)

---

# Where to call or write

Here are some important phone numbers you can call to get more information about Brownfields in your neighborhood.

## **City of Providence, Department of Planning & Development**

400 Westminster St., Providence, RI 02903  
(401) 351-4300

The Providence Department of Planning and Development reviews proposals and prepares re-development plans. Residents can contact the Department to review and get involved with redevelopment plans for their neighborhood. The Department also gives low interest loans for economic development projects.

## **Rhode Island Department of Environmental Management (RI DEM) Office of Waste Management**

235 Promenade St., Providence, RI 02908  
(401) 222-2797

The Rhode Island Department of Environmental Management (RI DEM) is a state agency responsible for regulating Brownfields reuse and redevelopment. RI DEM directs soil, air and water testing at Brownfields sites, and the agency reviews any plan for the future use. It also makes sure that contractors doing work at Brownfields follow all laws. RI DEM helps make legal agreements with developers of Brownfields sites.

## **Rhode Island Department of Health Office of Environmental Health Risk Assessment**

Three Capitol Hill, Providence, RI 02908  
(401) 222-4948

The Rhode Island Department of Health, Office of Environmental Health Risk Assessment provides information on the health effects of chemicals in people's homes, workplaces, or neighborhoods.

## **Environmental Protection Agency (EPA)**

US EPA-NE, One Congress St., Boston, MA 02114-2023  
1-800-EPA-REG1 (1-800-372-7341)

The EPA Brownfields Team provides a variety of technical and financial support involving the assessment and cleanup of Brownfields properties. Activities include community outreach; funding for assessments, job training and revolving loan funds; and expertise in hazardous materials.

## **Agency for Toxic Substances and Disease Registry (ATSDR)**

Office of Urban Affairs, 1600 Clifton Rd, Atlanta, GA 30333  
1-888-42-ATSDR (1-888-422-8737)

*in Boston:* ATSDR Region 1, US EPA-NE, One Congress St., Suite 1100 (HBT), Boston, MA 02114-2023  
(617) 918-1495

ATSDR is the main federal public health agency that deals with hazardous waste issues. ATSDR gives states and others advice about what could be the health problems from chemicals and toxic sites.

---

**This project would like to thank** The Providence Plan and the following community residents who took such an active role in this booklet's development. They are: Angela Burgio, Joseph H. Burgio, Carlos Corchado, Marisa Corchado, Mayra Corchado, William O'Brien, David G. Sifuentes, Rosa Solis, Victor Solis, and J. Taylor.

**Technical support** for this project was provided by Christina Zarcadoolas, research and writing; Eva Anderson, design;

Miguel Rojas, translation; and Alyson McCann, URI Home\*A\*Syst; in collaboration with the RI Department of Health, Office of Environmental Health Risk Assessment.

**Acknowledgement of Federal Support:** ATSDR provided 69% of the total project costs, as a Federal contribution of \$63,220. The Rhode Island Department of Health provided 31% of the total costs, as an in-kind contribution of \$27,924 (1997 Omnibus Consolidated Appropriations Act Section 507).

# Qué es un terreno baldío?

Esta guía es sobre edificios sin uso o abandonados y sitios en la ciudad llamados **terrenos baldíos**. Son lugares sucios y a veces peligrosos en su vecindario. Usualmente los terrenos baldíos son los lugares en donde funcionaban fábricas u otras industrias. Muchas veces son lugares muy sucios y llenos de basura.

Los terrenos baldíos pueden estar llenos de cosas peligrosas — suciedad, edificios en ruinas y aún sustancias químicas peligrosas y **tóxicas** (*tóc-si-cas*). Tóxico significa que esas sustancias químicas son peligrosas para la salud de los seres humanos. Cuando se limpia un terreno baldío, el vecindario se convierte en un lugar mejor.

Por todo el país se están

limpiando los terrenos baldíos y se los **reurbaniza** (convierte) en lugares mejores y más limpios — por ejemplo nuevas industrias, parques o se les da otros usos. Esta guía le explicará qué es lo que usted necesita hacer para participar (ayudar) y hacer buenas preguntas sobre el **nuevo uso** y la **nueva urbanización** de los terrenos baldíos.

Mientras usted sepa más sobre terrenos baldíos usted podrá participar en la planificación y mejora de esos lugares. Por ejemplo, supongamos que el terreno baldío será urbanizado nuevamente y se edificará una escuela con un lugar de juegos para toda la comunidad. Los vecinos pueden

participar y ayudar a decidir:

- **¿Es el plan de urbanizar nuevamente y usar los terrenos de nuevo es bueno para el vecindario?**
- **¿Será el nuevo lugar seguro para la gente del vecindario?**

## ¿Por qué los terrenos baldíos pueden ser lugares peligrosos?

### #1 Peligros que usted puede ver

Hay dos tipos de **riesgos** en los lugares baldíos — cosas que usted puede ver y cosas que usted no puede ver. Las cosas que usted puede ver, como las ventanas y vidrios rotos, los pisos de madera podrida, los clavos y las cañerías oxidadas y los antiguos barriles son un problema. Todas esas cosas son peligrosas. Los niños que juegan en un terreno baldío viejo corren un gran riesgo. Pueden encontrar, bajo tierra, tanques de

almacenamiento y caer dentro de ellos.

### #2 Peligros que usted no puede ver

Un terreno baldío puede tener sustancias químicas que usted no ve. **Algunas sustancias químicas pueden ser peligrosas para la salud de los seres humanos.** Las sustancias químicas pueden ser tóxicas y pueden producir enfermedades si las personas ingieren, respiran o tienen contacto con ellas.

# Las sustancias químicas

## ¿De dónde vienen las sustancias químicas?

Algunas veces las antiguas fábricas o negocios dejaron en el lugar que abandonaron químicos en las cañerías, barriles y tanques de petróleo enterrados, estos pueden tener un escape. Cuando tienen un escape (o *gotean*) en el suelo, los químicos pueden entrar en el terreno y dentro del agua de pozos y de ríos. Los científicos (investigadores) analizan para ver si el agua y el suelo son seguros.

## ¿Cuándo es una sustancia química peligrosa?

Piense lo siguiente: **las sustancias químicas están en todas partes y en todo lo que nosotros comemos y bebemos.** Nuestros cuerpos tienen sustancias químicas. La mayoría de estos químicos son naturales y seguros. **Pero algunos químicos, en cantidades diferentes, pueden ser peligrosos.**

Los negocios antiguos pueden dejar residuos químicos peligrosos. Por ejemplo, un antiguo negocio de limpieza en seco puede dejar peligrosos residuos de **COV** (compuestos orgánicos volátiles) en el suelo.

Comprendiendo las sustancias químicas		
Químico analizado	Uso común Uso en la casa	Uso en la industria o negocios de:
Pesticidas . . . . .	. . . Polvo para cucarachas Veneno para ratas	. . . Agricultura o Cías químicas
COV . . . . .	. . . Gasolina . . . . . Limpiadores en seco Bolitas de naftalina	. . . Refinería de petróleo
Semi-volátiles . . . . .	. . . Hollín . . . . .	. . . Incineradores
Metales . . . . .	. . . Baterías . . . . . Termómetros	. . . Cías de enchapado

▲ Este gráfico demuestra algunas de las clases de químicos que se pueden encontrar en un terreno baldío. En la columna de la *izquierda* se encuentra el nombre de la sustancia química, en la columna del *medio* usted podrá ver el uso diario del químico, aún en el hogar. La columna de la *derecha* muestra qué tipo de grandes industrias usan estos químicos. Este gráfico indica que hay varias formas de usar las sustancias químicas.

Los COV son sustancias químicas que pueden estar en el aire que respiramos.

## Cuando analizan los niveles de los químicos ¿qué cantidad encuentran?

Si los químicos están en todos lados ¿cómo saben los expertos lo que tienen que analizar?

Los científicos, usualmente, analizan el terreno y el agua

para descubrir químicos. Si ellos saben qué tipo de industria estaba ahí antes, eso ayudará a los científicos a decidir qué es lo que tienen que analizar. Algunos de esos análisis son **muy caros**. Por lo tanto ellos primero hacen el análisis básico. Se harán más análisis después de obtener los primeros resultados.

Para hacer los análisis, los científicos cavan hoyos, o **pozos**, dentro de la tierra y toman muestras del agua dentro de la tierra.

# El estándar para sustancias químicas: ¿cuánto es demasiado?

Cuando los científicos analizan el terreno baldío (la tierra o el agua) quieren saber **los niveles** de químicos que hay. El gobierno establece cuales son las cantidades o niveles seguros para los químicos. El nivel seguro es llamado **estándar**. Si ellos encuentran un nivel que es mayor al estándar, planifican hacer algo para mantener segura a la gente.

## ¿Qué pasa si el análisis es muy alto?

Si el nivel es muy alto los científicos toman acciones en diferentes formas. Dependiendo del riesgo pueden hacer lo siguiente:

- Remover la contaminación
- Cubrirla
- Cercar el área
- Plantar árboles y césped
- Enseñarle a la gente cómo usar el área
- Hacer más análisis

Cada terreno baldío es diferente, pero la lista mencionada le da a usted una buena idea del tipo de acciones a seguir en un lugar contaminado.

## Cómo entender el estándar

### Veamos un ejemplo de “estándar”

Digamos que la tierra de un terreno baldío fue analizada para saber si contenía plomo. El nivel de análisis fue de **3.500 ppm** (partes por millón). El nivel de acción de la Agencia Federal de Protección al Medio Ambiente (EPA, sus siglas en inglés) es de **400 ppm**. Por lo tanto el nivel es **mayor que el estándar** seguro (3.500 ppm es mayor que 400 ppm). Esto significa que se necesita hacer algo para asegurarse que la gente esté segura en el terreno baldío o cerca de él.

# ¿Qué es riesgo?

No hay ninguna cosa en el mundo que no tenga riesgos. Aún el cruzar la calle puede ser riesgoso. La pregunta importante es “¿Qué es un riesgo aceptable?”. “¿Qué es un riesgo que estoy dispuesto a aceptar?”.

A veces es difícil saber qué es un riesgo y quién está en riesgo. Por ejemplo si los niños están jugando en un edificio en ruinas eso puede ser un **gran riesgo**. Los niños se pueden caer, cortarse o lesionarse seriamente. Otro ejemplo es si el aire está lleno de polvo. Eso puede ser riesgoso para la gente con asma o para la gente mayor.

## Preguntas para hacer acerca de un riesgo

- ¿Hay riesgo?
- ¿Quién está más en riesgo?
- ¿Cuál es el nivel estándar aceptable para este químico?
- ¿Cuál es el riesgo estándar para la talla de un hombre o mujer normal?
- ¿Cuál es el riesgo estándar para un niño?
- ¿Cuándo es una sustancia química insalubre?
- ¿Qué me puede suceder a mí o a mis hijos?
- ¿Qué pasa con mujeres embarazadas?
- ¿Cómo sabré si me he enfermado debido a este químico?
- Si usted dice que aquí el nivel es seguro aquí, ¿esto quiere decir que el nivel es seguro en otros lugares del país?
- ¿Cómo me puedo proteger o minimizar el riesgo (mantener bajo el riesgo)?
- ¿Cómo puedo aprender más sobre este riesgo? ¿Con quién puedo hablar?
- ¿Hay algo que yo pueda leer?

**¡Recuerde! No existe un mundo sin riesgos. Lo importante es saber cuáles son los riesgos.**

*Diríjase a la última página para ver una lista de agencias y números telefónicos que puede utilizar.*

### Un ejemplo de estándares

La dosis estándar segura de la aspirina para el adulto promedio es de 2 aspirinas cada 4 horas. De hecho, ciertos adultos pueden tomar más de dos aspirinas y estar seguros. Pero si es un niño pequeño, 2 aspirinas es mucho. La dosis estándar segura (de 2 aspirinas) no es la dosis **estándar** para los niños.

# Usted puede participar

## Los residentes conocen una historia importante

El pasado histórico de un lugar es importante. Hable con la gente

que ha vivido por un largo tiempo en el vecindario. Quizás usted es una de esas personas! La gente que trabajó en esas fábricas o

industrias pueden saber qué tipos de químicos se usaron. Esta información ayudará a los planificadores y a los científicos.

Los terrenos baldíos se reurbanizan en todo tipo de lugares – escuelas, negocios, lugares de juego. La gente de la comunidad puede ayudar a decidir si es bueno el plan de construcción. Como residente, usted puede ayudar a decidir:

- ¿Es este plan para la reurbanización bueno para la comunidad?
- ¿Será seguro el nuevo lugar para la gente del vecindario?

Hay 2 momentos importantes en los cuales usted puede participar en un terreno baldío:

## 1. Participe cuando la ciudad o los urbanizadores están planificando limpiar, reusar o construir algo nuevo en el sitio baldío.

Por ejemplo, digamos que los urbanizadores piensan construir una nueva industria en un terreno baldío viejo. Para ser atractivo tendrá muchas lomas y entradas de autos. Los planificadores piensan que sólo los adultos irán al área industrial. Quieren seguir los

estandares de limpieza para los adultos.

Pero la gente del vecindario sabe que las lomas pueden atraer a muchos niños del vecindario. Este puede ser peligroso para los niños. Puede ser que los estandares de limpieza para los adultos no son seguros para los niños. Pida a los planificadores que no hagan el lugar tentador para los niños.

Llame o escriba a sus funcionarios electos (vea los ejemplos de la carta y de llamadas telefónicas en las páginas 8 y 9). Pregunte:

- ¿Qué está pasando con el lugar?
- ¿Hay planes de urbanizarlo?
- ¿Cuáles son los planes?
- ¿Usted llamará a reuniones públicas para hablar sobre los planes?

## 2. Participe cuando empiecen los planes de limpieza

Puede ser que los científicos y los contratistas propongan un calendario con reuniones locales, por lo tanto usted podrá ir, ver y escuchar sobre los planes para la limpieza. Este es el momento en que usted y sus vecinos pueden ser de gran ayuda y tener el mayor impacto. Usted puede ayudar a decidir si los planes de limpieza son buenos.

## Preguntas que pueda hacer sobre la limpieza del terreno baldío en su vecindario

**Ya hemos hablado sobre la contaminación y preguntas sobre el riesgo. Vea la página 4.**

- ¿Cuándo empezará el trabajo? ¿Cómo usted notificará al vecindario?
- ¿Habrá mucho ruido durante la limpieza?
- ¿Algunos de esos desperdicios serán tratados en el lugar? ¿Va a haber emanaciones de químicos durante la limpieza?
- ¿Es seguro transportarlos en camiones por el vecindario?
- ¿Adónde se llevan los desperdicios?
- ¿Qué sucede si hay un derrame de algún desperdicio?
- ¿Durante la limpieza habrá mucho polvo en el lugar?
- ¿Qué se está haciendo para controlar el polvo? ¿Es peligroso el polvo?
- ¿Los químicos emitirán olores? ¿Los gases serán tóxicos?
- ¿A quién reclamo si veo algo que creo que es incorrecto?
- ¿Qué tipos de letreros serán colocados cuando empiece el trabajo?
- ¿Los letreros serán en diferentes idiomas? ¿Tendrán dibujos?
- ¿Habrá guardianes en los cruces de las calles para ayudar con el tránsito de los camiones?
- ¿Habrá guardianes de noche en el lugar en donde se está trabajando?
- ¿El lugar será cercado?

# Qué esperar durante la limpieza

Los autos abandonados, las llantas usadas y otra basura tendrá que ser transportada a otro lado. Se necesitará demoler los edificios y las estructuras. También se tendrá que remover las antiguas cercas, el asfalto de los lugares de estacionamiento y los carriles de tren abandonados. Los metales, vidrios,

calderas y maquinarias antiguas o cualquiera de las partes de madera del edificio serán puestas dentro de un recipiente para desperdicios y se los llevará a un basurero.

### Camiones

Las máquinas excavarán hoyos y cargarán camiones. Camiones

grandes viajarán de ida y de vuelta sobre los caminos locales. Por lo tanto usted necesita saber durante qué horas del día y qué días de la semana estarán trabajando. Usualmente el contratista desea empezar alrededor de **6:30 ó 7:00 am** y trabajar hasta las **3:30 ó 4:00 pm**. Si no existe un apuro real para terminar el trabajo, ellos trabajarán de lunes a viernes. Entonces usted puede preguntar: **“Planea usted trabajar tiempo extra en este proyecto?”**.

**¿Qué calles usarán los camiones?**

Averigüe qué caminos usarán los camiones. La gente que planea este proyecto no siempre está consciente del tipo de tráfico que hay en su vecindario. Usted conoce los caminos locales – por donde la gente camina y conduce y en dónde juegan los niños. Quizás hay personas ancianas o enfermas en algunas calles. Usualmente los conductores de camiones tienen más de una posibilidad para elegir la ruta que pueden usar. Usted puede informarles de las rutas mejores.

**¿Cuánto tránsito de camiones habrá y cuán sucio será?**

El contratista deberá tener una idea sobre cuánta tierra necesita sacar y traer. Por lo tanto él puede calcular aproximadamente cuántas cargas habrá: 1 camión por hora, 10 camiones por hora o entre 1 ó 10 camiones por hora.

Los camiones se ensucian. Pregunte, **“Habrá un lavadero para los camiones que salen del área del trabajo?”**. Un lavadero es una plataforma que el contratista construye y por la cual los camiones pasan. Mientras el camión está sobre la plataforma, los trabajadores provistos con mangueras de alta presión lanzan agua para lavar al camión antes de salir a rodar por los caminos del vecindario. Esto mantiene el barro en el trabajo y mantiene limpio a su vecindario.

**¿Cuánto tiempo tomará la limpieza?**

La mayoría de los urbanizadores, antes de empezar el proyecto, tienen una buena idea de cuánto se demorarán. Pero a veces tienen

sorpresas por las cosas que encuentran. Aunque los planificadores no puedan darle a usted una respuesta exacta sobre cuándo se acabará el trabajo, ellos podrán darle un cálculo estimado de la fecha de terminación.

**Los niños y los terrenos baldíos**

Hable con sus niños sobre los terrenos baldíos y su limpieza. Explique los peligros de jugar en el lugar o cerca de él y los peligros de los camiones. Recuerde que los conductores de los camiones no pueden ver cada lugar alrededor de sus camiones. Dígale a sus niños que:

- **Sean más cuidadosos cuando crucen la calle.**
- **No jueguen cerca del terreno baldío.**

También **la gente de edad** tiene que ser más cuidadosa. Si usted conoce a una persona de edad en el vecindario, hágale saber que el ruido y el polvo sólo será transitorio.

# Tome acción: escriba cartas

Este es un ejemplo de una carta que usted puede escribir a los funcionarios sobre el terreno baldío. Diríjase a la última página para ver una lista de agencias y números telefónicos.

A \_\_\_\_\_ (escriba el nombre)  
 \_\_\_\_\_ (incluya domicilio)

Fecha \_\_\_\_\_

Estimado Sr./Estimada Sra. (escriba el nombre):

Yo vivo en la calle \_\_\_\_\_ y le escribo para expresar mi preocupación sobre el tráfico de la limpieza de las fábricas Valley. Los camiones comienzan a transitar durante la semana cerca de las 6:30 Hs. en la mañana. Este es un **problema** por varias razones. Tenemos ancianos viviendo en esta calle y también tenemos a niños caminando entre las 7:30 y las 8:30 am.

Quisiera pedirle dos cosas. Creo que los camiones no deben empezar a transitar hasta las 9:00 y parar a las 4:30. También creo que la calle Pine sería una buena ruta para los camiones que entran y salen del lugar.

Estoy ansioso por ver este lugar limpio. Pero también me preocupa que esta limpieza sea hecha en la mejor forma para mi vecindario. Por favor llámeme al \_\_\_\_\_ (su número de teléfono) o escíbame a \_\_\_\_\_ (su domicilio).

Gracias por su atención.

Atentamente,

\_\_\_\_\_ (su firma)

\_\_\_\_\_ (escribid su nombre claramente aqui)

◀ **1er párrafo:**  
¿Cuál es el problema?

◀ **2do párrafo:**  
¿Qué está pidiendo?

◀ **3er párrafo:**  
¿Como pueden ponerse en contacto con usted?

# Tome acción: haga llamadas

## Llamada telefónica #1: Haciendo un reclamo sobre problemas de tráfico de camiones durante la limpieza.

Diríjase a la última página para ver una lista de agencias y números telefónicos.

*Vecino:* Hola. Quisiera hablar con alguien sobre la limpieza de las fábricas Valley. Yo vivo en el vecindario.

*Operador:* Un minuto por favor. Transferiré su llamada.

*Planificador:* Hola. ¿en qué puedo ayudarle?

*Vecino:* Estoy llamando por el tráfico de camiones en el sitio de limpieza de las fábricas Valley. Yo vivo en el vecindario y quisiera **◀ Identifíquese** hablar sobre el tránsito de los camiones.

*Planificador:* ¿Cuál es el problema?

*Vecino:* Pienso que los camiones comienzan a transitar muy temprano en la mañana **◀ ¿Cuál es el problema?** y están causando problemas a las personas de edad. Los camiones comienzan a salir a las 6:30 de la mañana del terreno. Es muy temprano para el vecindario. Nosotros tenemos a muchos ancianos viviendo acá y este tráfico es un problema. Quisiera que los planificadores supieran de **◀ ¿Qué está pidiendo?** que estoy llamando para decirles que los camiones no deberían empezar hasta las 8:00 de la mañana.

*Planificador:* Bueno, le daré su mensaje al administrador del tráfico.

*Vecino:* Gracias. ¿Quién es el administrador del tráfico? ¿Me podría. deletrear su nombre.? Antes de colgar, quisiera su nombre y también **◀ Anote el nombre y escríbalo** quisiera darle a usted mi nombre y mi número de teléfono. Le agradecería si alguien me puede llamar. (De su nombre, deletréelo y de su número de teléfono.)

Muchas gracias y espero la llamada \_\_\_\_\_

(nombre del administrador del tráfico).

## Llamada telefónica #2: Averiguando si hay planes para un sitio baldío cerca de su vecindario.

*Vecino:* Hola. Quisiera hablar con alguien sobre el edificio vacío y el terreno baldío en la calle Fábricas. Yo vivo en el vecindario.

*Operador:* Un minuto por favor. Transferiré su llamada.

*Planificador:* Hola. ¿En qué puedo ayudarle?

*Vecino:* Estoy llamando sobre el edificio vacío y el terreno baldío en la calle **◀ Identifíquese** Fábricas. Vivo en la vecindad y quisiera saber si la municipalidad tiene algún plan para reurbanizarlo o reusar ese terreno. ¿Quién **◀ ¿Qué está pidiendo?** es la persona que podría darme esta información?

*Planificador:* Necesitará hablar con Srta. Rios. Su número de teléfono es \_\_\_\_\_.

*Vecino:* Gracias. ¿Me podría **◀ Anote el nombre y escríbalo** dar su nombre, por favor?

---

# ¿Dónde llamar o escribir?

**En esta página encontrará números de teléfono importantes así usted puede obtener más información acerca de los terrenos baldíos de su vecindario.**

## **Ciudad de Providence, Departamento de Planificación y Desarrollo**

400 Westminster St., Providence, RI 02903  
(401) 351-4300

El Departamento de Planificación y Desarrollo hace la revisión de las propuestas y prepara los planes para el desarrollo. Los residentes pueden contactar al Departamento para revisar y asistir con los planes de desarrollo para el vecindario. El Departamento también da préstamos con bajos intereses para el desarrollo económico de proyectos.

## **Departamento de Medio Ambiente de Rhode Island (RI DEM) Oficina de Administración de Desperdicios (Waste Management en inglés)**

235 Promenade St., Providence, RI 02908  
(401) 222-2797

El Departamento de Medio Ambiente de Rhode Island (RI DEM – siglas en inglés) es una agencia estatal responsable por la regulación, el reuso y redesarrollo de los terrenos baldíos. RI DEM inspecciona el análisis de la tierra, aire y agua en los terrenos baldíos y la agencia revisa los planes para los futuros usos de estos terrenos. También asegura que el contratista trabaja siguiendo las leyes o reglamentos. RI DEM ayuda a hacer arreglos legales con las personas a cargo del desarrollo de los terrenos baldíos.

## **Departamento de Salud Pública de Rhode Island Oficina de Evaluación de Riesgos de salud del medio ambiente**

Three Capitol Hill, Providence, RI 02908  
(401) 222-4948

El Departamento de Salud Pública de Rhode Island – Oficina de Evaluación de Riesgos de salud del medio ambiente provee información sobre los efectos de las sustancias químicas en la salud de la población en sus casas, lugares de trabajos o vecindario.

## **Agencia de Protección del Medio Ambiente (EPA)**

US EPA-NE, One Congress St., Boston, MA 02114-2023  
1-800-EPA-REG1 (1-800-372-7341)

El equipo de EPA (siglas en inglés) para los terrenos baldíos provee una variedad de ayuda técnica y financiera incluyendo la evaluación y limpieza de las propiedades de terrenos baldíos. Las actividades incluyen contactar a la comunidad, tratar de generar dinero para la evaluación, entrenamiento para trabajos y conseguir fondos para préstamos y experiencia con materiales peligrosos.

## **Agencia de Sustancias Tóxicas y Registro de Enfermedades (ATSDR)**

Office of Urban Affairs, 1600 Clifton Rd, Atlanta, GA 30333  
1-888-42-ATSDR (1-888-422-8737)  
*en Boston:* ATSDR Region 1, US EPA-NE, One Congress St., Suite 1100 (HBT), Boston, MA 02114-2023  
(617) 918-1495

ATSDR es la principal agencia federal de salud pública que se dedica a los asuntos de desperdicios peligrosos. ATSDR aconseja a los estados y otras entidades acerca de cuáles pueden ser los problemas de salud derivados de los lugares con químicos y sustancias tóxicas.

---

**Este proyecto quiere agradecer** al Plan de Providence y a los residentes de las siguientes comunidades quienes tuvieron un rol muy importante en el desarrollo de este librito. Ellos son: Angela Burgio, Joseph H. Burgio, Carlos Corchado, Marisa Corchado, Mayra Corchado, William O'Brien, David G. Sifuentes, Rosa Solis, Victor Solis, y J. Taylor.

**La asistencia técnica** para este proyecto fue provista por Christina Zarcadoulas, investigación y desarrollo del librito; Eva Anderson, diseño; Miguel Rojas traducción; y Alyson McCann, URI

Home\*A\*Syst; en colaboración con el Departamento de Salud Pública de Rhode Island – Oficina de Evaluación de Riesgos de salud del medio ambiente.

**Asistencia Federal:** ATSDR proveyó 69% del total del costo del proyecto, contribución federal \$ 63.220. El Departamento de Salud Pública de Rhode Island proveyó 31% del costo total y contribución interna de \$ 27.924 (1997 Omnibus Consolidated Appropriations Act Section 507).

## ***Rhode Island Department of Environmental Management***

### **Working to Protect Rhode Island's Environment**

#### **Who We Are....**

The Rhode Island Department of Environmental Management (DEM) is the state agency responsible for preserving the quality of Rhode Island's environment for you and everyone who calls Rhode Island home. Our main office is conveniently located in Providence. We help protect the **AIR** you breathe, the **LAND** your homes, businesses and schools are built on, and the **WATER** you use for swimming and fishing.

#### **What We Do....**

DEM takes citizen complaints about pollution seriously and is committed to responding to complaints as quickly as possible. By contacting us, your complaint can be addressed and the investigation process can begin. Or maybe you don't have a complaint – maybe you have a question or need information about something happening in your neighborhood. We can help.

DEM receives complaints and questions about many subjects, including: illegal dumping, odor complaints from industrial facilities, illegal discharges into streams/rivers, dust problems, and similar threats to public health and the environment.

#### **How We Can Help You....**

DEM encourages your participation in helping us protect the environment and health of your community. We are here to answer your questions and investigate your complaints. Are you looking for information about a particular pollutant such as mercury or exterior lead paint?

Or maybe you are interested in learning more about a piece of property under construction near your home, or how to properly dispose of used oil? Are you concerned about illegal dumping or strange odors in your neighborhood?

We are here to serve you – please do not hesitate to contact us if you have questions, need to file a complaint about something happening in your community, or want more information about the many programs DEM runs that may directly impact you or your neighborhood. You can raise an issue anonymously or leave your name to get follow-up information.

#### ***VISIT OR CALL US:***

**401-222-6822**

**Rhode Island Department of Environmental Management**  
**Office of Waste Management**  
**State Site Remediation & Brownfields Program**

**Who We Are....**

The Rhode Island Department of Environmental Management's (DEM) Office of Waste Management (OWM) Site Remediation & Brownfields Program was established to provide fair, comprehensive and consistent regulation of the investigation and remediation of hazardous waste and hazardous material releases, implemented in a timely and cost-effective manner. The program is designed to determine if a site poses a threat to human health and the environment and evaluate whether or not proposed remedies effectively provide protection.

This program also supports the redevelopment and reuse of contaminated sites through the Brownfields program. Sites are identified, evaluated, cleaned up and brought back to beneficial reuse in Rhode Island communities.

**What We Do....**

OWM's Site Remediation & Brownfields Program regulates and provides technical oversight for the investigation and remediation of releases of hazardous waste and/or hazardous materials to the environment; ensures that those investigations and remedial activities are conducted in a consistent manner that adequately protects human health and the environment; and enforces regulations regarding the proper disposal of abandoned hazardous wastes and hazardous materials.

**The Process ....**

Cleaning a contaminated site requires investigation, planning and action. The *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases*

(<http://www.dem.ri.gov/pubs/regs/regs/waste/remreg04.pdf>) define the specific documents that are needed, or may be needed, as part of that process:

- Notification of Release;
- Site Investigation Work Plan (SIWP);
- Public Notice of Investigation;
- Site Investigation Report (SIR);
- Public Notice of Completed Site Investigation & Public Comment Period on Technical Feasibility of Proposed Remedy;
- Remedial Action Work Plan (RAWP);
- Remedial Action;
- Closure Report; and, if applicable,
- Environmental Land Usage Restriction (ELUR).

We are here to serve you – please do not hesitate to contact us if you have any questions or would like more information about one of the properties within the program that may directly impact you or your neighborhood. Under the Freedom of Information Act you have a right to review site files.

## Tidewater Site Fact Sheet; September 2010 Holder Dismantling Project

### *Former Tidewater MGP and Electric Generation Site*

#### Background

From the 1880's through roughly the 1970's, a manufactured gas plant (MGP) and electric generation facility operated adjacent to the Seekonk River at the end of Merry and Tidewater streets in Pawtucket, Rhode Island. The Tidewater MGP used industrial processes to produce gas from coal and oil. The gas was used primarily for the same purposes that natural gas is used today. This manufactured gas was stored in large steel holders for subsequent distribution to the neighboring community. Two of these former gas holders are located on the northwest side of the site adjacent to Tidewater Street. These holders contain a relatively small amount of sludge, which was a by-product of the former gas storage, and rainwater, which has accumulated over the past several years.

#### Holder Dismantling Project

As part of National Grid's plan for addressing the former MGP site, these former gas holders are currently being dismantled. This holder dismantling work is being performed consistent with all applicable Rhode Island Department of Environmental Management (RIDEM), City of Pawtucket, and Occupational Safety and Health Administration (OSHA) requirements. This project is being conducted on behalf of National Grid by T Ford Company, Inc. under the supervision of GZA GeoEnvironmental, Inc.

This holder dismantling project consists of the following primary steps:

- Removal of accumulated stormwater from the holders. This step was completed in July 2010.
- Removal of loose/flaking paint and asbestos containing materials from the exterior of the holders. This work was initiated in August 2010 and is anticipated to be complete in late September 2010.
- Removal, processing for transport, and off-site disposal of sludge by-products that have accumulated in the bottom of the holders. Water from the processing of the sludge is being treated on-site and discharged to the Seekonk River under an approved RIDEM permit. This work was also initiated in August 2010 and is anticipated to be completed in early October 2010.
- Dismantling and off-site disposal of the steel tank structures. The steel holders will be cut into small pieces by large shears. The steel will then be loaded onto trucks and shipped off-site for recycling. No explosives will be used. This effort is currently expected to be initiated in late September 2010 and be complete by mid to late December 2010.

National Grid is taking steps to minimize any inconvenience to the neighboring community from this project. In addition to all the required on-site worker health and safety measures, this project includes several measures designed specifically to address the neighboring community and limit any inconveniences to the extent practical. These measures include:

- Operation of a real-time, state of the art perimeter air monitoring system that detects both particulates and chemical compounds in the air at the project boundaries. In the event unacceptable air quality levels are even approached, the system alerts on-site personnel and either work is stopped or other air quality safeguards are implemented. This perimeter monitoring system operates 24 hours per day, 7 days a week.
- Monitoring of noise at the work zone perimeter to ensure that noise levels are within acceptable levels.
- Operation of foams and fragrance enhanced mister units to mitigate nuisance odors, which are primarily related to the handling of the sludge contained in the bottom of the holders. On-site personnel are routinely evaluating these odors (both on and off-site) and are making adjustments to these odor control measures. Once the sludge disposal work is complete (currently anticipated by early October 2010), the potential for nuisance odors should be significantly reduced.
- Routinely sprinkling water over the surface of the work area and unpaved site roadways to control dust migration.
- Restricting access to the site with fencing and having security personnel on site 24 hour, 7 days a week.
- Coordinating truck traffic so as not to interfere with the neighboring school/community.

Schedule - As described above, the holder dismantling activities are currently anticipated to be complete by late December 2010. The sludge handling and disposal activity, which could be the primary cause of potential nuisance odors, is scheduled to be complete by early October 2010.

Questions and Comments - If you would like more information on National Grid's activities at the site, please contact Michele Leone from National Grid at 781-907-3651.

### **Ficha Técnica del Sitio Tidewater, Septiembre 2010 Proyecto de Desmantelamiento de los Tanques de Gas**

#### **Antigua Tidewater Planta de Gas (MGP) y Sitio de Generación Eléctrica**

##### **Antecedentes**

Desde 1880 hasta aproximadamente 1970 operaron en la vecindad del río Seekonk, al final de las calles Merry y Tidewater en Pawtucket, Rhode Island una planta de gas (MGP) y una planta de generación eléctrica. La planta de gas Tidewater, mediante procesos industriales, produjo gas usando carbón y petróleo. Este gas se utilizó para los mismos propósitos que el gas natural se usa en la actualidad. El gas manufacturado era almacenado en tanques de metal de gran tamaño para su posterior distribución en la comunidad vecina. Dos de estos viejos tanques de gas están situados al noroeste del sitio vecino a la calle Tidewater. Estos tanques contienen una cantidad relativamente pequeña de fango, el cual es un subproducto del almacenamiento de gas junto con agua de lluvia y se ha acumulado en los últimos años.

##### **Proyecto de desmantelamiento de los tanques**

Como parte del plan de National Grid para el antiguo sitio MPG estos antiguos tanques de gas están siendo desmantelados. Este proyecto se realiza siguiendo todos los requerimientos del Departamento de Manejo Ambiental de Rhode Island (Rhode Island Department of Environmental Management, RIDEM), ciudad de Pawtucket y Seguridad Ocupacional y Administración de Salud (Occupational Safety and Health Administration, OSHA) aplicables al caso. Este proyecto está siendo conducido en nombre de National Grid por la compañía T Ford bajo la supervisión de GZA Environmental, Inc.

El proyecto de desmantelamiento de los tanques consiste en los siguientes pasos

- Remoción del agua pluvial acumulada en los tanques. Este paso fue completado en julio de 2010.
- Remoción de pintura suelta o en escamas y de material con contenido de asbestos del exterior de los tanques. Este trabajo fue iniciado en agosto del 2010 y se anticipa que será completado a principios de octubre del 2010.
- Remoción, procesado para transporte y depósito fuera de sitio de los fangos subproductos acumulados en el fondo de los tanques. El agua producto del procesado de los fangos es tratada en el sitio y descargada en el río Seekonk con la aprobación de RIDEM. Este proceso fue iniciado en agosto del 2010 y se anticipa que será completado al principio de octubre del 2010.
- Desmantelamiento y depósito fuera del lugar de las estructuras metálicas de los tanques. Los tanques metálicos serán cortados en pedazos pequeños usando grandes hojas cortantes. El metal será entonces cargado en camiones y transportado fuera del lugar para ser reciclado. Este trabajo será realizado sin utilizar explosivos. Se prevé que este proceso se iniciara a fines de septiembre y que se finalizara aproximadamente entre mediados y finales de diciembre del 2010.

National Grid está tomando todas las medidas necesarias para minimizar los inconvenientes producidos en la comunidad aledaña. Además de todas las medidas relacionadas al bienestar y la seguridad de los trabajadores en el sitio, este proyecto incluye varias medidas designadas especialmente con el objetivo de limitar los inconvenientes producidos a la comunidad, en la medida de lo posible. Estas medidas incluyen:

- Operación de un sistema de monitoreo de aire de vanguardia en tiempo real. Este sistema detecta tanto partículas como compuestos químicos en el aire de los límites del proyecto. En el caso de producirse niveles cercanos a niveles inaceptables el sistema alertará al personal del sitio y consecuentemente los trabajos serán detenidos o nuevas medidas para salvaguardar el nivel de la calidad del aire serán implementadas. Este sistema de monitoreo del perímetro de la obra operará las 24 horas del día los 7 días de la semana.
- Monitoreo del nivel del ruido en el perímetro de la obra para asegurar que el nivel de ruido esté dentro de niveles aceptables.
- Operación de unidades de espumas y atomizadores de fragancias con el objetivo de mitigar olores molestos, los que están relacionados principalmente con el manejo de los fangos contenidos en el fondo de los tanques. El personal de la obra estará constantemente monitoreando estos olores (tanto dentro del perímetro de la obra como fuera de ella) y ajustando las medidas para controlarlos. Una vez que el proceso de eliminación de los fangos sean completado (lo que se anticipa que sucederá aproximadamente a principios de octubre), la probabilidad de ocurrencia de olores molestos se verá reducida en forma considerable.
- Rociado frecuente de la superficie de trabajo y de los caminos sin pavimentar de la obra con agua para reducir la migración de polvo.
- Restricción del acceso a la obra mediante cercos y teniendo personal de seguridad en la obra las 24 horas del día, los 7 días de la semana.
- Coordinación del tráfico de camiones de modo de no interferir con las actividades de las escuelas y comunidades vecinas.

##### **Programa de Actividades**

Como fue descrito más arriba se anticipa que las actividades de desmantelamiento de los tanques serán completadas a fines de diciembre del 2010. Las actividades relacionadas con los fangos, las cuales podrían causar olores molestos, están programadas para ser finalizadas a principios de octubre del 2010.

##### **Preguntas y Comentarios**

Si usted necesita más información con respecto a las actividades de National Grid en el Sitio, por favor contacte a Michele Leone de la National Grid en 781-907-3651.

Re: Notice to Abutter 54B 95  
Proposed System Upgrade Activities  
Natural Gas Regulator Station  
Former Tidewater Facility  
Pawtucket, Rhode Island

Dear Abutter:

The purpose of this letter is to notify you that National Grid will be conducting system upgrade activities to the existing natural gas regulator station at the former Tidewater facility located at the end of Tidewater Street in Pawtucket, Rhode Island.

The facility upgrades, which have been approved by the Rhode Island Public Utility Commission (RIPUC), will consist of:

- the relocation of an existing overhead 16-inch gas main to below ground;
- shallow excavation work within the fenced natural gas station area to properly abandon existing facilities;
- removal of limited areas of impacted concrete and surface soils;
- general renovation of the buildings;
- replacement of the security fence surrounding the regulator station area; and
- updating of all the equipment including electronic and communication services within the buildings.

The work will begin in early **May 2011** and is expected to take approximately **four months**. Work will generally take place from **7:00 a.m. – 4:00 p.m., Monday to Friday**. We apologize in advance for any inconvenience, but this project is part of our commitment to provide continuous improvements and keep the natural gas delivery system safe and reliable.

If you would like more information or have any questions, please contact Paul Stasiuk at 401-784-7991. Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

Very truly yours,

Paul Stasiuk  
Coordinator, Community Relations

Re: Notice to Abutter  
Short Term Response Action – Pipe Removal  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

Dear Abutter:

The purpose of this letter is to notify you that The Narragansett Electric Company d/b/a National Grid (National Grid) will be conducting limited response activities at the former Tidewater Manufactured Gas Plant (MGP) and the former Pawtucket No. 1 Power Station Site located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners and tenants in accordance with requirements established in the Rhode Island Department of Environmental Management's (RIDEM) Rules and Regulation for the Investigation and Remediation of Hazardous Materials (Remediation Regulations). Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

The proposed limited response actions are being completed to address an above ground portion of a former steel process pipe located along the Seekonk River associated with former Manufactured Gas Plant (MGP) facility operations. Certain sections of the piping are in disrepair and contain residual coal tar-like material. These coal tar-like materials have been observed on the ground surface and river embankment beneath this piping which may be contributing to intermittent sheen outbreaks recently observed along a limited portion of the Seekonk River adjacent to the Site. In an effort to mitigate these conditions, National Grid proposes to complete certain response activities. Specifically, these activities will involve: (1) the removal and off-Site disposal of a 150-foot section of above grade process piping; and (2) the removal and off-Site disposal of a limited volume of impacted soil (approximately 1 cubic yard) located proximate to the process pipe. In addition, residual, hardened coal tar-like material located on the river embankment will be manually removed and containerized in drums with the removed surface soil described above for off-Site transport to a licensed receiving facility for disposal. The proposed field activities are scheduled to commence on or about August 22, 2011, and it is estimated that the project will take approximately 1 week to complete.

The proposed activities are further detailed in a *Short Term Response Action Plan* (STRAP) submitted to the Rhode Island Department of Environmental Management (RIDEM) in October 2010 (Revised January 2011) and *Evaluation of Applicability of Air Pollution Control Regulation No. 9, Proposed Above Ground Former Processing Pipe Removal* submitted to RIDEM's Office of Air Resources in July 2011. There is a 14-day comment period, commencing with the date of delivery of this notice, during which the public may review RIDEM records pertaining to this property and submit written comments regarding the proposed limited response activities described

herein. Copies of the submittals referenced above can be obtained on RIDEM's website (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>). The proposed limited response actions will be conducted in accordance with RIDEM's Remediation Regulations and will be performed by GZA GeoEnvironmental, Inc. (GZA) on behalf of National Grid.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651.

Very truly yours,

GZA GeoEnvironmental, Inc.

Re: Notice to Abutter  
Supplemental Site Investigation Work Plan Addendum – Max Read Field  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

Dear Abutter:

The purpose of this letter is to notify you that The Narragansett Electric Company d/b/a National Grid (National Grid) will be conducting additional environmental investigation activities associated with the former Tidewater Manufactured Gas Plant (MGP) and the former Pawtucket No. 1 Power Station Site located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners and tenants in accordance with requirements established in the Rhode Island Department of Environmental Management's (RIDEM) Rules and Regulation for the Investigation and Remediation of Hazardous Materials (Remediation Regulations). Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

The purpose of the upcoming additional subsurface investigation is to further investigate certain data gaps identified following completion of recent Site investigation activities at the Site. Specifically, the proposed investigation is being completed to address the visual observations of fill materials proximate to the eastern boundary of the Max Read Field. The investigation will include advancement of up to 5 test boring locations using a direct-push Geoprobe® rig. The field activities are scheduled to commence on or about November 7, 2011, and will occur over an approximate 2 to 3 day period.

The proposed activities are further detailed in a *Supplemental Site Investigation Work Plan* (SSIWP) *Addendum* submitted to the Rhode Island Department of Environmental Management (RIDEM) in August 2011. There is a 14-day comment period, commencing with the date of delivery of this notice, during which the public may review RIDEM records pertaining to this property and submit written comments regarding the proposed investigation activities described herein. Copies of the submittal referenced above can be obtained on RIDEM's website (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>). These investigation activities will be conducted in accordance with RIDEM's Remediation Regulations and will be performed by GZA GeoEnvironmental, Inc. (GZA) on behalf of National Grid.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

Re: Notice to Abutter and Interested Parties  
Proposed Electrical Substation Upgrades  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

To Abutter and/or Interested Parties:

The purpose of this letter is to notify you that The Narragansett Electric Company d/b/a National Grid (National Grid) intends to complete certain upgrades to the Pawtucket No. 1 Substation at the Tidewater Site located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners, neighboring residents and interested parties, consistent with previous notices for these types of facility upgrades and with our discussions with members of the public at the Community Interviews held at the Blackstone Valley Visitor Center on June 19 and 20, 2012. Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

The electrical substation upgrades will require limited earthwork within and proximate to the fenced substation area to allow for installation of new electrical conduit, cable and/or appurtenances. Upgrades of certain electrical equipment will also take place within the substation yard and associated building. The proposed substation upgrades are necessary to allow for National Grid to continue providing reliable service to the electric customers of Rhode Island. As these proposed upgrades will require some limited disturbance of soil at the Site, National Grid will perform air monitoring consistent with a RIDEM approved plan during the excavation activities. A fact sheet is attached to this notice with more detailed information regarding the proposed earthwork and air monitoring program. The excavation work associated with the utility upgrade project is expected to be conducted over an approximate eight week period during this six month reconstruction project. The project is anticipated to begin on September 4, 2012, with the earthwork being completed between late September and December 2012.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651.

Very truly yours,

GZA GeoEnvironmental, Inc.

GZA File No. 05.0043654.00

Re: Aviso a Colindantes y Partes Interesadas  
Mejoras Propuestas a la Subestación Eléctrica  
Antigua Facilidad de Tidewater  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

Aviso a Colindantes y/o Partes Interesadas:

530 Broadway  
Providence  
Rhode Island  
02909  
401-421-4140  
Fax: 401-751-8613  
<http://www.gza.com>

El propósito de la presente es notificarles que The Narragansett Electric Company, d/b/a National Grid (National Grid), intenta completar ciertas mejoras á la Subestación Pawtucket No. 1 en Tidewater localizada al final de las calles Tidewater y Merry en Pawtucket, Rhode Island. Esta noticia es provista á todos los dueños de propiedades colindantes, residentes vecinos y personas interesadas consistente con avisos previos con este tipo de mejoras á facilidades y con nuestras discusiones con miembros del público durante Entrevistas Comunales mantenidas en el Blackstone Valley Visitor Center durante el 19 y 20 de Junio, 2012. Si usted es el dueño de una propiedad, le pedimos que provea una copia de esta carta a todos sus inquilinos.

Las mejoras a la subestación eléctrica requerirán cierto trabajo de terreno dentro y en la proximidad del área vallada permitiendo la instalación de conductos eléctricos nuevos, cables y/o accesorios. Cierta equipo eléctrico será también mejorado dentro del terreno de la subestación y los edificios asociados. Estas mejoras son necesarias para permitir que National Grid continúe proveyendo un servicio confiable a los clientes de Rhode Island. A medida que las mejoras propuestas crearan cierta, limitada, perturbación del terreno en el lugar, National Grid conducirá monitoreo de aire consistente con un plan que es RIDEM-aprobado durante las actividades de excavación. Se adiciona una hoja de especificaciones conteniendo información más detallada relativa al trabajo de suelos propuesto así como el programa de monitoreo de aire. Se espera que el trabajo de excavación asociado con las mejoras de la utilidad tome, aproximadamente, un periodo de ocho semanas durante los seis meses del proyecto de reconstrucción. Se anticipa que el proyecto empezara en 4 de Septiembre, 2012 habiendo completado el trabajo de suelos entre finales de Septiembre y Diciembre 2012.

Si requiere más información o tiene preguntas adicionales, por favor contacte Michele Leone de National Grid al 781-907-3651.

Respetuosamente suyo,

GZA GEOENVIRONMENTAL, INC.

## Tidewater Site Fact Sheet – Electrical Substation Upgrades

### Former Tidewater MGP and Electric Generation Site

#### Background

From the 1880s through approximately the 1970s, a manufactured gas plant (MGP) and electric generation facility operated adjacent to the Seekonk River at the end of Merry and Tidewater streets in Pawtucket, Rhode Island. The Tidewater MGP used industrial processes to produce gas from coal and oil. The gas produced was used primarily for the same purposes that natural gas is used today (heating, cooking, etc.). MGPs, which were common throughout the northeast before the region's natural gas pipelines were built, often yielded by-products of the gas production process such as tars, sludges and oils. The Tidewater electric generation facility formerly used coal, oil, tar and other substances to produce electricity. Some of these substances have remained in the environment at facilities such as these after they were closed down.

The gas manufacturing and electric generating operations at the Tidewater facility were terminated in 1968 and 1975, respectively. Today, National Grid continues to operate a natural gas regulating and interchange station on the north portion of the property and an electrical substation and switch house on the south portion of the property. These facilities serve to provide essential gas and electrical service to customers in Rhode Island. Figure 1, Site Plan, shows the location of these features. The location of the electrical substation is depicted on Figure 1.

#### Proposed Electrical Substation Upgrades

As part of facility upgrades, National Grid intends to complete certain reconstruction activities associated with the Pawtucket No. 1 Substation located in the central portion of the Site. The proposed work will occur within the southern fenced area of the existing substation and in the access/parking area immediately east and outside of the fenced portion of the substation. Figure 2, Proposed Substation Upgrades and Pre-Characterization Sampling, shows the location of these features. The reconstruction activities will require limited earthwork to install new underground cables, conduits and other facility utilities and properly abandon certain existing system features. These limited earthwork activities are anticipated to result in the temporary displacement of approximately 160 cubic-yards of soil. The majority of these excavated materials will be reused to backfill the trenches. A limited amount of excess materials may be transported off-Site for disposal. As part of the substation reconstruction earthwork, soils excavated during conduit installation work and miscellaneous shallow excavation activities will be temporarily placed in a working stockpile on plastic sheeting adjacent to the excavation for subsequent reuse as backfill. Temporary soil stockpiles will also be placed on and covered with plastic sheeting, or placed within watertight, covered roll-off containers.

#### Pre-characterization Sampling

Based on testing performed on soil samples collected within the electrical substation and proposed excavation areas, it is anticipated that excavated materials will likely exhibit low levels of polynuclear aromatic hydrocarbons (PAHs), inorganics (metals), total petroleum hydrocarbon (TPH), and cyanide. PAHs and arsenic were detected in soil at concentrations in excess of RIDEM's Method 1 Industrial/Commercial Direct Exposure Criteria (I/C-DEC). No Volatile Organic Compounds (VOCs) were detected above the Method 1 I/C-DEC, with results of most VOC compounds being non-detect. Overall, the quality of the materials in this area of the Site is consistent with that of typical urban fill that is commonly found in industrialized, urban areas.

#### Air Quality Monitoring

While the soil data collected in the area of planned excavation suggest the potential for air quality impacts associated with this work is relatively low, National Grid will monitor air quality during these activities to confirm. As described below, in the unlikely event impacts are detected above RIDEM-approved threshold levels, certain controls will be put in place to address detections.

This air monitoring will be performed as described in GZA's February 20, 2012 *Evaluation of Applicability of Air Pollution Control Regulation No. 9* submittal to the RIDEM Office of Air Resources and GZA's subsequent correspondence with RIDEM dated June 14, 2012 and July 27, 2012. On July 5, 2012, RIDEM issued a letter stating that an air permit for these proposed earthwork activities would not be required.

During the proposed substation earthwork activities, GZA will perform real-time air monitoring for total VOCs, and particulate dust within the work zone and at the property line as described in the above referenced submittals and correspondence which were reviewed and approved by RIDEM. Specific monitoring for benzene will also be conducted in the event total VOCs are detected above threshold levels. Real-time air monitoring will utilize hand held instruments so field personnel can alter locations based on the activity being performed and changing wind directions. Readings will be

This is an important notice. Please have it translated.

### Tidewater Site Fact Sheet – Electrical Substation Upgrades

#### Former Tidewater MGP and Electric Generation Site

collected both within the work zone itself as well as at certain locations along the Site perimeter. Field personnel will select the appropriate monitoring location reading depending on activities being performed and wind direction. The following table presents the real-time monitoring action levels for the work zone perimeter and property line. Figure 1, Site Plan, shows the property line air monitoring locations (S1 through S5) that will be monitored during the work.

Compound	Work Zone Perimeter	Property Line
Total Volatile Organic Compounds (TVOC)	1.0 ppm	0.1 ppm
Respirable Particulate Dust (PM10)	1,000 ug/m3	150 ug/m3

In the event these real time action levels are exceeded at sustainable levels within the work zone or at the property line (*i.e.*, in excess of the respective action levels for a period of 5 minutes), GZA will immediately identify the likely cause, and the Contractor shall implement appropriate engineering controls and/or modify work practices to address the action level exceedances. The following table presents the actions that will be undertaken if a sustained exceedance of either respirable dust or TVOC is encountered.

Compound	Immediate Actions in Event of a Sustained Exceedance of Action Levels
Total Volatile Organic Compounds (TVOC)	<ol style="list-style-type: none"> <li>Evaluate the likely source of sustained readings (<i>i.e.</i> truck emissions, moisture in the area, off-site source, actual work, etc.)</li> <li>If determined that the source is the actual work, Contractor shall immediately implement appropriate engineering controls and/or modify work practices to address exceedances.</li> <li>Immediately deploy summa canisters in both an upgradient and downgradient location and submit for laboratory analysis when the work day is complete.</li> </ol>
Respirable Particulate Dust (PM10)	<ol style="list-style-type: none"> <li>Evaluate the source of sustained readings (<i>i.e.</i> earthwork, heavy wind, off-Site source, etc.)</li> <li>If determined that the source is the actual work, Contractor shall immediately implement appropriate engineering controls (<i>e.g.</i>, application of water, etc.) and/or modify work practices to address the exceedances.</li> </ol>

Certain air monitoring data (*i.e.*, volatile organic compound screening data, , dust monitoring data and analytical data) will be posted on the bulletin boards to be located at the end of Tidewater Street and the end of Bowles Court, pending City approval.

#### Schedule

The overall reconstruction project is anticipated to take approximately six months to complete and is currently scheduled to begin on September 10, 2012. The excavation work and monitoring described above is expected to be conducted over an approximately eight week period (late September and December 2012) during this six month reconstruction project.

#### Questions and Comments

If you would like more information on National Grid’s activities at the site, please contact Michele Leone from National Grid at 781-907-3651.

*If you are interested in signing up for the Tidewater mailing list for future announcements about the Site, please contact Michele Leone at the phone number above or Michele.leone@nationalgrid.com.*

## Tidewater Hoja de Especificaciones – Mejorías Subestación Eléctrica

### Anterior Tidewater MGP y la Generacion Electrica Situan

#### Historial

Desde los años 1880 y a través, aproximadamente, los años de 1970, una planta de gas manufacturado (MGP) y una facilidad de generación eléctrica operaban adyacente al Río Seekonk al final de las calles Merry y Tidewater en Pawtucket, Rhode Island. La Tidewater MGP usaba procesos industriales para producir gas de carbón y aceite. El gas producido se usaba, primariamente, para los mismos propósitos que el gas natural se usa hoy en día (calefacción, cocina, etc.). MGPs que eran muy comunes en el noreste antes de que las líneas de gas natural de la región fueran construidas, a menudo rendían productos secundarios al proceso de producción de gas así como alquitrán, sedimentos, y aceites. La facilidad de generación eléctrica Tidewater usaba carbón, aceite, alquitrán y otras sustancias para producir electricidad. Algunas de estas sustancias se han mantenido en el ambiente en facilidades como esta tipa después de cerrar.

La producción de gas y las operaciones de generación eléctrica en la facilidad de Tidewater fueron terminadas en 1968 y 1975, respectivamente. Hoy en día, la National Grid continúa operando una estación reguladora de gas natural y una estación de intercambio en la porción sur de la propiedad. Estas facilidades proveen gas y servicio eléctrico esencial a los clientes localizados en Rhode Island. La Figura 1, Site Plan, muestra la localidad.

#### Propuesta de mejoras a la Subestación Eléctrica

Como parte de las mejoras a la facilidad, la National Grid intenta completar ciertas actividades de reconstrucción asociadas con la Subestación Pawtucket No. 1 localizada en la porción central del sitio. El trabajo propuesto será confinado al área sur de la existente subestación y en el área de parqueo/acceso inmediatamente al Este y fuera del área cercada de la subestación. La Figura 2, *Proposed Substation Upgrades and Pre-Characterization Sampling*, muestra la localidad. Las actividades de reconstrucción demandan cierto trabajo de suelos para instalar nuevos cables subterráneos, conductos, otras utilidades y el abandono apropiado de ciertos sistemas existentes. Se anticipa que el resultado de estas actividades de suelos será el desplazamiento de aproximadamente 160 yardas-cubicas de suelo. La mayoría de esos materiales excavados será reusado para rellenar las trincheras. Una cantidad limitada de materiales en exceso podría ser transportada fuera del lugar para su disposición. Como parte de la reconstrucción, los suelos excavados durante la instalación de los conductos y actividades múltiples de excavación ligera serán almacenados temporalmente sobre hojas de plástico adyacente al sitio de excavación para su uso subsecuente como relleno. Temporalmente, cierta cantidad de suelo también será almacenado sobre y cubierto con hojas de plástico o almacenado en contenedores a prueba de agua.

#### Muestreo de Pre-Characterización

Basado en exámenes realizados en las muestras de suelo recogidas dentro de la subestación eléctrica y las áreas de excavación propuesta se anticipa que los materiales excavados presentaran niveles bajos de *polynuclear aromatic hydrocarbons* (PAHs), inorganicos (metales), hidrocarburos petroléos total (TPH) y cianuro. Ciertos de estos componentes (PAHs y arsenico) fueron detectados en el suelo a concentraciones en exceso de RIDEM Method 1 Industrial/Commercial Direct Exposure Criteria (I/C-DEC). Componentes Volátiles Orgánicos (VOCs) por encima del *Method 1* I/C-DEC no fueron detectados. Generalmente, la calidad de los materiales en esta área es consistente con el relleno urbano.

#### Monitoreo de la Calidad de Aire

Mientras que los datos de suelo recopilados en el área de excavación planeada sugieren que el impacto potencial a la calidad de aire asociado con este trabajo es relativamente bajo, National Grid monitoreará la calidad de aire durante estas actividades para confirmación. Como se describe a continuación, en la improbable posibilidad de detectar impacto por encima niveles aprobados por RIDEM, ciertos controles serán instalados para detectar o el trabajo será detenido hasta que la situación está mejorada.

El monitoreo de aire será implementado de acuerdo al proceso descrito en el informe de GZA de 20 Febrero, 2012, *Evaluation of Applicability of Air Pollution Control Regulation No. 9*, enviado a la RIDEM Office of Air Resources y correspondencia subsecuente entre GZA y RIDEM de fecha el 14 de Junio, 2012 y el 27 de Julio 2012. En la fecha de 5 Julio, 2012, RIDEM publicó una carta indicando que un permiso para estas actividades propuestas no sería requerido.

## Tidewater Hoja de Especificaciones – Mejorías Subestación Eléctrica

### Anterior Tidewater MGP y la Generacion Electrica Situan

Durante las actividades de excavación propuestas en la subestación, GZA implementará monitoreo de aire a tiempo real por VOCs y polvo particular en la zona de trabajo y en la línea de la propiedad como descrito en el material referenciado y correspondencia que fueron revisados y aprobados por RIDEM. El monitoreo específico por benzina también será conducido en el evento que los niveles de VOC's sean detectados por encima de los niveles de umbral. El monitoreo de aire a tiempo real utilizará instrumentos de mano de manera que los ingenieros puedan alterar localidades basado en la actividad del momento y cambios en la dirección del viento. Los datos serán adquiridos tanto en el área de trabajo mismo así como en ciertas localidades alrededor del perímetro del sitio. Los ingenieros determinarán la localidad de monitoreo adecuada dependiendo en la actividad y la dirección del viento.

La tabla siguiente representa el monitoreo a tiempo real y niveles de acción para el perímetro de la zona y la línea de propiedad. La Figura 1, Site Plan, muestra las localidades de monitoreo de aire (S1 a S4) usadas durante el trabajo

Compuestos	Perimetro de la Zona	Línea de Propiedad
Total Componentes Volátiles Orgánicos (Volatile Organic Compounds) (TVOC)	1.0 ppm	0.1 ppm
Respirable Particulate Dust (PM10)	1,000 ug/m3	150 ug/m3

En el evento que estos niveles de acción a tiempo real excedan niveles sustentables dentro de la zona de trabajo o la línea de propiedad (i.e., en exceso de respectivo niveles de acción por un periodo de cinco minutos), GZA identificará inmediatamente la causa posible, el Contratista implementará los controles apropiados, modificará los métodos de trabajo y/o parará el trabajo inmediatamente. La siguiente tabla presenta las acciones que se tomaran si se encuentra un exceso sostenido de TVOC o polvo respirable.

Compuesto	Acciones inmediatas en el evento de niveles de acción mantenidos excesivos,
Total Volatile Organic Compounds (TVOC)	<ol style="list-style-type: none"> <li>1. Evaluar la causa posible de las lecturas sostenidas. (i.e. emisiones de los camiones, humedad en el área, fuente fuera del lugar, trabajo actual, etc.)</li> <li>2. Si se determinan que la causa es el trabajo actual, el Contratista implementara los controles de ingeniería apropiados, modificara las practicas de trabajo y/o detendrá el trabajo. Desplegar inmediatamente contenedores SUMMA® en las gradientes alta y baja para someter a un análisis de laboratorio cuando el día concluya.</li> </ol>
Respirable Particulate Dust (PM10)	<ol style="list-style-type: none"> <li>1. Evaluar la fuente de la lectura sostenida. (i.e. excavación, vientos altos, fuente fuera de sitio, etc.)</li> <li>2. Si se determinan que la causa es el trabajo actual, el Contratista implementará los controles de ingeniería apropiados, (aplicación de agua) modificara las practicas de trabajo y/o detendrá el trabajo.</li> </ol>

Ciertos datos de monitoreo de aire (i.e., compuestos orgánicos volátiles, monitoreo de polvo y datos analíticos) serán publicados en los boletines de información localizados al final de la calle Tidewater y el final de la calle Bowles Court, dependiendo la aprobación de la ciudad.

### Horario

Se anticipa que el proyecto en general tome aproximadamente seis meses para cumplir y está programado a empezar en el 10 de Septiembre, 2012. Se espera que el trabajo de excavación y monitoreo previamente descrito tenga una duración de aproximadamente ocho semanas (final de Septiembre y Diciembre 2012) durante los seis meses del proyecto de reconstrucción.

### Preguntas y Comentarios

Si requiere más información o tiene preguntas adicionales, por favor contacte Michele Leone de National Grid al 781-907-3651.

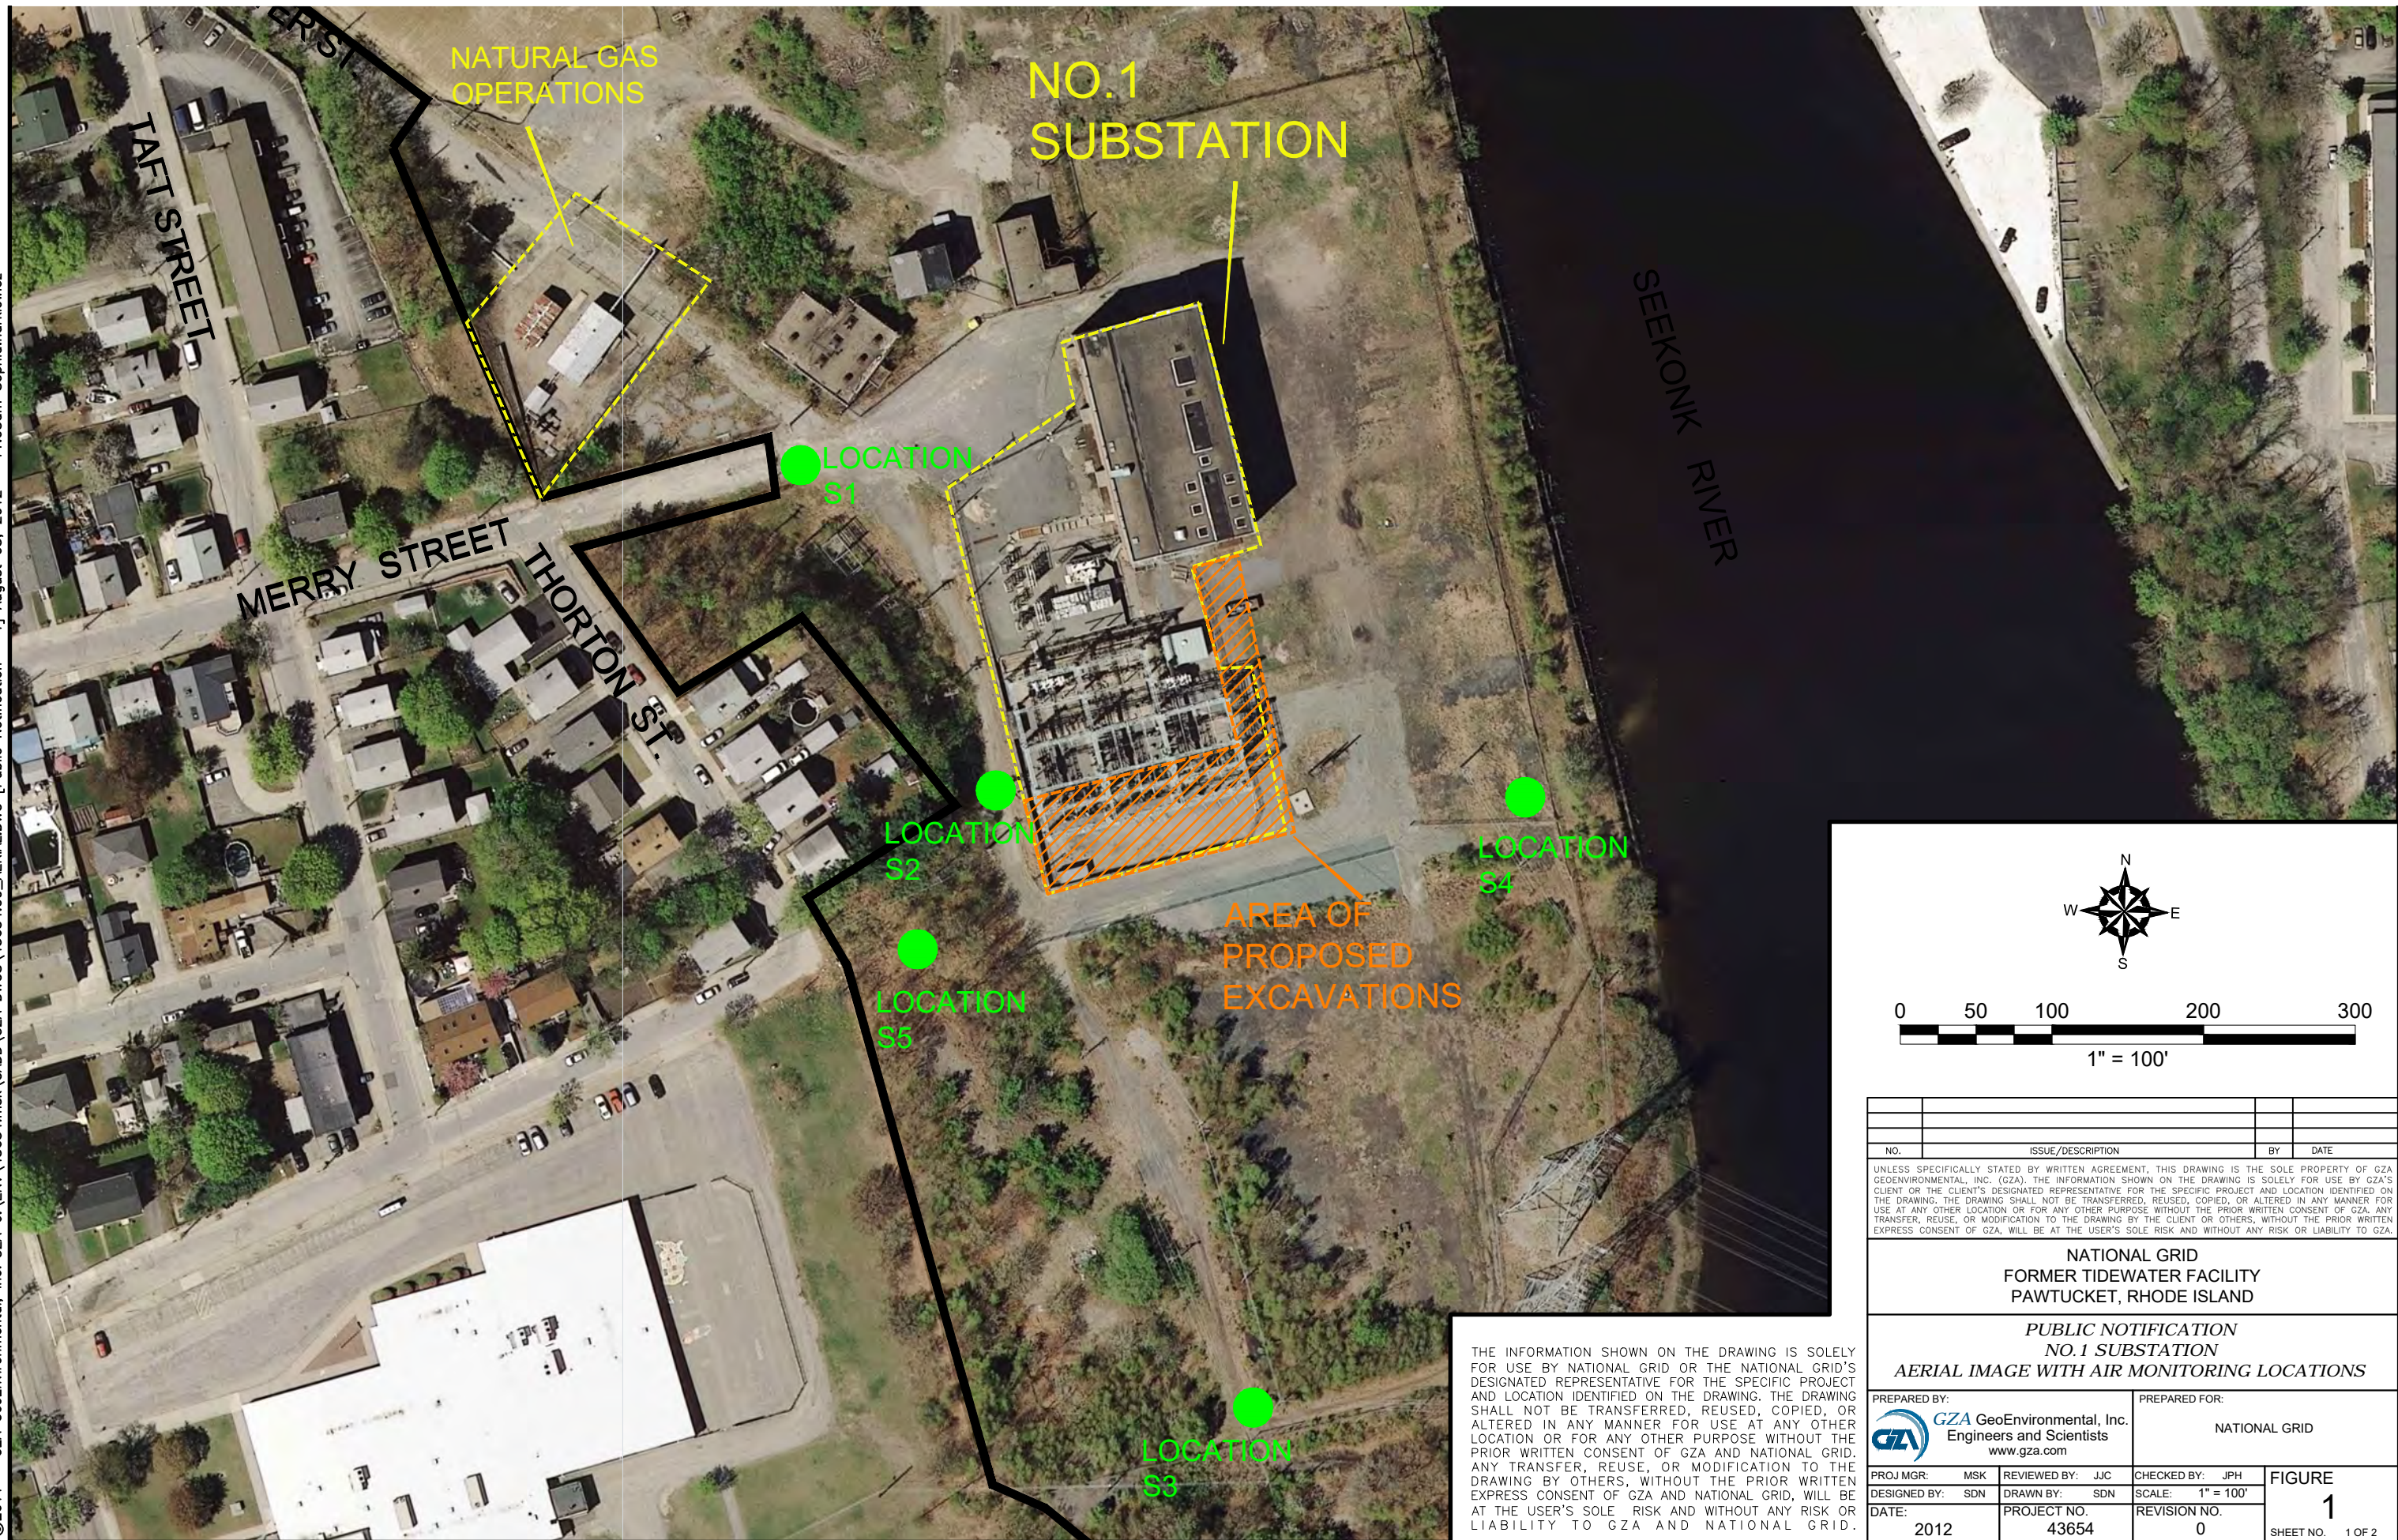

*Si esta interesado a inscribirse para la lista de envío de Tidewater para futuros anuncios acerca del Sitio, visita por favor contáctese con Michele.leone@nationalgrid.com.*

Re: Notice to Abutter and Interested Parties  
DRAFT Public Involvement Plan  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

To Abutter and/or Interested Parties:

On behalf of The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) has prepared this letter to inform you of the availability of the draft Public Involvement Plan (PIP) for the Tidewater Site located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners, neighboring residents and interested parties consistent with previous notices. Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

A Public Involvement Plan (PIP) is an agreement between the party conducting response actions (in this case, National Grid) and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the Tidewater Site. A PIP is a “living” document and can be amended to reflect additional issues or challenges that may arise during the site cleanup process.

A draft of the PIP has been submitted to the Rhode Island Department of Environmental Management (RIDEM) on November 26, 2012 for review and comment. A copy of this document can be obtained from the following information repositories:

- RIDEM publicly available website: <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>
- National Grid publicly available website: [www.tidewatersite.com](http://www.tidewatersite.com)
- Publicly Accessible Site File at RIDEM's Office of Waste Management filed under Former Tidewater Coal Gasification Plant (Pawtucket), RIDEM Case No. 95-022. Appointments to view the files can be made by contacting RIDEM, Department of Technical and Customer Assistance, 235 Promenade Street, Providence, Rhode Island (telephone: 401-222-4700 extension 7307, <http://www.dem.ri.gov/topics/filerevw.htm>).

National Grid currently plans to schedule a public meeting during the week of January 14, 2013 to discuss comments to the draft PIP. If you have comments regarding the draft PIP, please submit them in writing prior to the public meeting to:

Joseph Martella  
R.I. Department of Environmental Management  
Office of Waste Management  
235 Promenade Street  
Providence, RI 02908-5767

Details regarding the public meeting, including date, time and venue, will be posted to the RIDEM (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>) and National Grid Tidewater ([www.tidewatersite.com](http://www.tidewatersite.com)) websites, as well as mailed and emailed to those parties on the Tidewater

mailing list. Interested persons can be added to this mailing list via an email request to Michele Leone at National Grid ([Michele.Leone@nationalgrid.com](mailto:Michele.Leone@nationalgrid.com)) with your name and address or by calling Michele Leone at 1-781-907-3651.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651.

Very truly yours,

GZA GeoEnvironmental, Inc.

Re: Aviso a Colindantes y Partes Interesadas  
BORRADOR Plan Público de Participación  
Antigua Facilidad de Tidewater (Sitio)  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

Aviso a Colindantes y/o Partes Interesadas:

En nombre de Narragansett Electric Company d/b/a National Grid, GZA, ha preparado esta carta para informarles de la disponibilidad del borrador del Plan Público de Participación (PIP) para el Sitio de Tidewater localizado al final de las calles Tidewater y Merry en Pawtucket, Rhode Island. Esta nota está siendo provista a todos los dueños de propiedades colindantes, residentes y partes interesadas y que es consistente con notas previas. Si usted es un dueño de propiedad que es alquilada, requerimos que provean una copia de esta carta a sus inquilinos.

Este Plan (PIP) es en acuerdo con la parte que conduce las acciones y el público, acerca de como compartirán información y cómo el público estará disponible a comentar en los planes para limpieza del Sitio Tidewater. El PIP es un documento "vivo" y puede tener enmiendas para reflejar puntos adicionales o desafíos que puedan presentarse durante el proceso de limpieza.

El borrador del PIP ha sido sometido al Rhode Island Department of Environmental Management (RIDEM) en Noviembre 26, 2012 para revisión y comentarios. Una copia de este documento puede ser obtenido en los siguientes links:

- RIDEM sitio web público:  
<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>
- National Grid disponible en el sitio web público: [www.tidewatersite.com](http://www.tidewatersite.com)
- Archivo público en site RIDEMs, Office of Waste Management filed under Former Tidewater Coal Gasification Plant (Pawtucket), RIDEM Case No. 95-022. Cita para examinar el archivo comunicarse al RIDEM, Department of Technical and Customer Assistance, 235 Promenade Street, Providence, Rhode Island (401-222-4700 extension 7307, <http://www.dem.ri.gov/topics/filerevw.htm>)

National Grid planea actualmente programar una reunión pública durante la semana de Enero 14, 2013 para discutir los comentarios al borrador del PIP.

Si usted tiene comentarios con relación al mismo, por favor envíelos por escrito antes de la reunión mencionada a:

Joseph Martella  
R.I. Department of Environmental Management  
Office of Waste Management  
235 Promenade Street  
Providence, RI 02908-5767

Detalles relacionados con la reunión pública, incluyendo fecha, hora y dirección, serán puestas en el RIDEM (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>) y en el National Grid Tidewater ([www.tidewatersite.com](http://www.tidewatersite.com)) redes, así como correos y correos electrónicos a aquellas partes que figuran en la lista del Tidewater.

Personas interesadas pueden ser agregadas a esta lista vía correo electrónico a Michele Leone en el National Grid ([Michele.Leone@nationalgrid.com](mailto:Michele.Leone@nationalgrid.com)) con su nombre y dirección o llamando a Michele Leone al 1-781-907-3651.

Si le gustaría más información, o tiene alguna pregunta, por favor contacte a Michel Leone del National Grid al 781-907-3651.

Atentamente,

GZA GEOENVIRONMENTAL, INC.

Re: Notice to Abutters and Interested Parties  
Public Meeting to Discuss DRAFT Public Involvement Plan  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

To Abutters and/or Interested Parties:

On behalf of The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) has prepared this letter to inform you of a public meeting for the Tidewater Site to be held on **Tuesday, January 29<sup>th</sup> at 6 pm at the Francis J. Varieur Elementary School located at 486 Pleasant Street, Pawtucket, Rhode Island.**

The purpose of this public meeting will be to discuss public comments to the draft Public Involvement Plan (PIP). A PIP is an agreement between the party conducting response actions (in this case, National Grid) and the public about how information will be shared and how the public will be able to provide comments on plans for assessment and cleanup. A PIP is a “living” document and can be amended to reflect additional issues or challenges that may arise during the site cleanup process.

National Grid submitted the draft PIP to the Rhode Island Department of Environmental Management (RIDEM) on November 26, 2012 for review and comment. In addition, on November 27, 2012, National Grid issued a letter notifying abutters and interested parties that the draft PIP was available for review and comment. As described in this letter, a copy of the draft PIP can be obtained from the following information repositories:

- RIDEM publicly available website: <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>
- National Grid publicly available website: [www.tidewatersite.com](http://www.tidewatersite.com)
- Publicly Accessible Site File at RIDEM’s Office of Waste Management filed under Former Tidewater Coal Gasification Plant (Pawtucket), RIDEM Case No. 95-022. Appointments to view the files can be made by contacting RIDEM, Department of Technical and Customer Assistance, 235 Promenade Street, Providence, Rhode Island (telephone: 401-222-4700 extension 7307, <http://www.dem.ri.gov/topics/filerevw.htm>).

Again, the public meeting will be held on Tuesday January 29, 2013 between the hours of 6:00 PM and 8:00 PM at the Francis J. Varieur Elementary School. Representatives of RIDEM, National Grid and GZA will attend the meeting to discuss comments on the draft PIP. This notice is being provided to abutting property owners, neighboring residents and interested parties on our mailing list. Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651 or [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com)

Very truly yours,

GZA GeoEnvironmental, Inc.

Re: Notificación a partes interesadas  
Reunión pública para discutir el borrador del plan de Involucramiento  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

A asociados y/o partes interesadas

En nombre de la compañía Narragement Electric d/b/a National Grid, GZA GeoEnvironmental, Inc. (GZA) ha preparado esta carta para informarles de una reunión pública para el Sitio Tidewater a ser sostenida **el Martes Enero 29 a las 6 pm en el colegio Francis J. Variour Elementary, localizado en 486 Pleasant Street, Pawtucket, Rhode Island.**

El propósito de esta reunión será para discutir públicamente los comentarios del Plan de Involucramiento (PIP). El PIP es un acuerdo entre la parte conductor de respuestas de acción (en este caso National Grid) y el público, acerca de cómo será compartida la información y cómo el público estará disponible a proveer comentarios en los planes para asesoramiento y limpieza. A PIP es un documento “vivo” y puede ser modificado para reflejar comentarios y puntos adicionales o desafíos que puedan surgir durante el proceso de limpieza.

National Grid ha sometido el borrador de PIP al departamento de Medio ambiente de Rhode Island (RIDEM en noviembre 26, 2012, para revisión y comentarios. En adición, en Noviembre 27, 2012, National Grid hizo una carta notificando a los socios y partes interesadas sobre el borrador PIP que estaba disponible para revisión y comentarios. Como se describe en esta carta, una copia del borrador PIP puede obtenerse de los siguientes centros de información:

- RIDEM sitio disponible en la web: <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>
- National Grid sitio disponible en la web: [www.tidewatersite.com](http://www.tidewatersite.com)
- El archive public en las oficinas de RIDEM archivado bajo el antiguo Tidewater Caso No. 95-022. Citas par aver los archives pueden ser hechas contactando el departamento técnico y servicio al cliente de RIDEM, 235 Promenade Street Providence, Rhode Island (teléfono 401-222-4700 extensión 7307, <http://www.dem.ri.gov/topics/filerevw.htm>).

Una vez más, la reunión pública será sostenida Martes Enero 29 a las 6 pm en el colegio Francis J. Variour Elementary, localizado en 486 Pleasant, Pawtucket, Rhode Island. Representantes de RIDEM, National Grid y GZA estarán presentes en la reunión para discutir los comentarios al borrador PIP. Esta notificación está siendo provista a los asociados dueños, residentes de barrio Street y partes interesadas de nuestra lista de correos. Si usted es dueño de una propiedad que está siendo alquilada, le requerimos que provea una copia de esta carta a sus inquilinos.

Si necesitan más información o tienen alguna pregunta, por favor contactar a Michele Leone al 781-907-3651 r [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com)

Atentamente,

GZA GeoEnvironmental, Inc.

Re: Notice to Abutters and Interested Parties  
Community Outreach Session  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

To Abutters and/or Interested Parties:

On behalf of The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) has prepared this letter to inform you of a community outreach session for the Tidewater Site to be held on **Wednesday, March 27<sup>th</sup>, from 6:30 p.m. to 8:30 p.m., at the Francis J. Varietur Elementary School located at 486 Pleasant Street, Pawtucket, Rhode Island.** This notice is being provided to abutting property owners, neighboring residents and interested parties on our mailing list. Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

This community outreach session is part of National Grid's efforts to keep people informed of environmental activities at the Tidewater Site. The session format will be informal, featuring informational poster boards on a variety of Site-related topics, including history of the Tidewater Site, findings of the investigations, demonstrations of certain field equipment, description of current National Grid operations at the property, etc. Each poster board will be staffed by a representative from National Grid and/or GZA to answer questions. Representatives of the Rhode Island Department of Environmental Management (RIDEM) will also be present to answer questions from the public.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651 or [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com). To request a live translator for the session, please contact Michele by March 18<sup>th</sup>.

Very truly yours,

GZA GeoEnvironmental, Inc.

## SAFETY AND SECURITY FIRST

### The Former Tidewater MGP and Electric Generation Site

Over the last several years, National Grid has worked under the direction of the Rhode Island Department of Environmental Management (RIDEM) to conduct environmental assessments at the former Tidewater Site and surrounding properties. These properties include eastern portions of the Max Read Athletic Field owned by the City of Pawtucket.

We know the community near the Tidewater Site, as well as parents and teachers at Varietur and other nearby schools, are concerned about byproducts created by a manufactured gas plant (MGP) that operated at the Site from the 1880s through the 1960s – and want to know more about how National Grid plans to remediate those byproducts. National Grid will continue to distribute these types of fact sheets in the community as part of the company's efforts to keep people informed of environmental activities at the Site.

### Completing Excavations Associated With Electrical Substation Work

National Grid has completed the majority of excavations associated with work designed to upgrade the existing electrical substation that operates on the Tidewater Site. Because assessments identified the presence of a small amount of contamination in soil on the Site, National Grid took steps to protect the health and safety of workers and the general public during the excavation work. These steps included:

- Installing informational bulletin boards at the ends of Tidewater Street and Bowles Court.
- Developing a color-coded system to notify residents and parents whether National Grid was conducting excavation activities on any given day. This information was posted daily to the bulletin boards.
- Monitoring the air for compounds and dust during active excavation activities at six locations around the perimeter of the Tidewater Site, including one fixed location near the residences on Thorton Street. National Grid posted the air monitoring data to the bulletin boards weekly.
- Implementing a phone message alert system to communicate time-sensitive information to interested parties, such as if air quality readings exceeded the project's conservative limits during earthwork activities.

*The majority of excavation associated with upgrading the existing Tidewater electrical substation is complete.*

### RIDEM Considering National Grid's Recommended Remedial Option

National Grid submitted a Remedial Alternative Evaluation (RAE) to RIDEM in July 2011 comparing four options for the Tidewater Site. We recommended moving forward with one of the options, which would involve:

- Installing two ground coverings, called engineered caps, across the site.
- Installing an underground steel wall to protect the Seekonk River from the possible movement of NAPLs. NAPLs are liquids that don't mix well with water, like vegetable oil.
- Removing MGP residuals from select areas of the Site.

The next step is for RIDEM to review the recommended National Grid plan.

### Implementing the First-of-Its-Kind Public Involvement Plan (PIP) in Rhode Island

Throughout our work at the Tidewater Site, both now and in the future, we're committed to sharing information. Many of the communications activities we've undertaken have been incorporated into the state's first Public Involvement Plan (PIP). A PIP is an agreement between a party conducting remediation activities and the public on how information will be shared with the community. It also addresses how the public can comment on plans for the Site. PIPs are tailored to specific sites. A PIP can be updated to reflect additional issues or challenges that may arise during the remedial process. Elements of National Grid's PIP for the Tidewater Site:

<p><b>Public Notice</b></p> <ul style="list-style-type: none"> <li>• Mailing list to announce public meetings, distribute fact sheets, etc.</li> <li>• Optional email list           <ul style="list-style-type: none"> <li>- Sign up at <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>- Or, send request to National Grid (see below contact information)</li> </ul> </li> </ul>	<p><b>Fact Sheets and Enhanced Communications</b></p> <ul style="list-style-type: none"> <li>• Fact sheets to communicate new information and/or achievement of significant milestones</li> <li>• Informational Bulletin Boards (placed at the ends of Tidewater Street and Bowles Court)</li> <li>• Phone Message Alert System</li> </ul>
<p><b>Community Meetings</b></p> <ul style="list-style-type: none"> <li>• Encourages participation by all to create an atmosphere of constructive, open dialogue</li> </ul>	<p><b>Information Repositories</b></p> <ul style="list-style-type: none"> <li>• Publicly Accessible Site File</li> <li>• RIDEM Case No. 95-022:           <ul style="list-style-type: none"> <li>- <a href="http://www.dem.ri.gov/topics/filerevw.htm">http://www.dem.ri.gov/topics/filerevw.htm</a></li> </ul> </li> <li>• Websites:           <ul style="list-style-type: none"> <li>- <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>- <a href="http://www.dem.ri.gov/programs/benviron/waste/tide.htm">http://www.dem.ri.gov/programs/benviron/waste/tide.htm</a></li> </ul> </li> <li>• Local Information: Repository           <ul style="list-style-type: none"> <li>- Pawtucket Library (13 Summer St.)</li> </ul> </li> <li>• Bulletin Boards: Tidewater Street and Bowles Court</li> </ul>

### Community Information Session Planned for March 2013

National Grid is working with RIDEM and GZA GeoEnvironmental, Inc. (GZA), an environmental consulting firm in Providence, to finalize the PIP and a remedial program for the Tidewater Site. National Grid will hold a community outreach session in March 2013 to present information about the Site. Following this session, National Grid and RIDEM will hold the initial community meeting within 60 days after RIDEM issues a Program Letter to National Grid for the Site. The Program Letter formally puts the findings of the Site Investigation Report (SIR) out for a public comment period.

ACTIVITY	TIME PERIOD
Community Outreach Session	Within 60 days of Draft PIP Meeting
Initial Community Meeting	Within 60 days of receipt of Program Letter from RIDEM – during Site Investigation Report (SIR) public comment period
Public Meeting on DRAFT Remedial Action Approval Plan (RAWP)	Within 12 months of receipt of Remedial Decision Letter
Submit RAWP for RIDEM approval	Within 6 months of DRAFT RAWP Meeting
Public Meeting prior to start of project	Minimum of 30 days prior to start of work
Public Meetings during remediation	Meeting schedule to be presented for discussion purposes once remedial schedule is developed and approved by RIDEM
Public Meeting upon completion of the project	Within 30 days following completion of remediation

#### If You Have Questions and Comments

For more information on National Grid's activities at the site, please contact Michele Leone at 781-907-3651 or [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com) or visit our website at [www.tidewatersite.com](http://www.tidewatersite.com)

<http://www.gza.com>

A nombre de The Narragansett Electric Company, conocida empresarialmente como National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) ha preparado esta carta para informarle que el **miércoles, 27 de marzo** se llevará a cabo una sesión de información a la comunidad con referencia al sitio conocido como Tidewater. La sesión será de **6:30pm a 8:30pm en la escuela primaria Francis J. Varieur** localizada en el **486 de la calle Pleasant, Pawtucket, Rhode Island**. Este aviso se da a conocer tanto a los dueños de propiedades aledañas, como a los residentes del vecindario y a toda parte interesada que se encuentra inscrita en nuestra lista de distribución postal. Si usted es el dueño de una propiedad que da en alquiler, le pedimos que entregue a sus inquilinos una copia de esta carta.

Esta sesión de información a la comunidad es parte del esfuerzo que National Grid está haciendo para mantener informado al público de las actividades ambientales que tienen lugar en Tidewater. El formato de la sesión es informal; se presentarán carteleras sobre una variedad de tópicos relacionados al sitio, incluyendo: la historia del sitio Tidewater y los resultados de las investigaciones, también habrá demostraciones de cierto tipo de equipo de campo así como una descripción de las operaciones actuales que National Grid está haciendo en la propiedad, etc. Cada cartelera estará a cargo de un empleado de National Grid y/o GZA para contestar cualquier pregunta que pudiera surgir. También habrá empleados del Departamento de Administración Ambiental de Rhode Island (RIDEM, por sus siglas en inglés) para contestar cualquier pregunta que el público pudiera tener.

Si desea obtener más información o desea hacer alguna pregunta, por favor comuníquese con Michele Leone en National Grid al 781-907-3651 ó [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com). Para solicitar la presencia de un intérprete para la sesión, por favor comuníquese con Michele a más tardar el 18 de marzo.

Atentamente,

GZA GeoEnvironmental, Inc.

A handwritten signature in blue ink, appearing to read 'Margaret S. Kilpatrick', is written over a faint, illegible printed name.

Michele Leone, National Grid

# LA PROTECCIÓN Y SEGURIDAD SON LO PRIMERO

El Sitio Conocido Anteriormente Como Tidewater MGP y El Sitio De Producción De Electricidad

En el transcurso de los últimos años, National Grid ha trabajado bajo la dirección del Departamento de Administración Ambiental de Rhode Island (RIDEM, por sus siglas en inglés) para llevar a cabo evaluaciones ambientales en el sitio conocido anteriormente como Tidewater y las propiedades aledañas. Estas propiedades incluyen ciertas partes en la zona este del Max Read Athletic Field, el cual pertenece a la ciudad de Pawtucket.

Sabemos que la comunidad cerca del sitio de Tidewater, así como los padres y maestros en Varietur y otras escuelas cercanas, están preocupados por los subproductos generados por la planta de gas (MGP, en inglés), la cual estuvo abierta en ese sitio desde la década de 1880 hasta la década de 1960, y desean obtener más información sobre cuáles son los planes que National Grid tiene para resolver la presencia de estos subproductos. National Grid va a continuar distribuyendo estas hojas de información en la comunidad como parte de los esfuerzos de la compañía para mantener informada a las personas en lo que se refiere a las actividades ambientales que se llevan a cabo en dicho sitio.

## Completar las excavaciones relacionadas al trabajo de la subestación eléctrica

National Grid ha completado la mayor parte de las excavaciones relacionadas con el trabajo diseñado para modernizar la actual subestación eléctrica que se encuentra en el sitio de Tidewater. Debido a que cuando se hizo la evaluación se detectó la presencia de una pequeña cantidad de contaminación en el suelo del sitio, National Grid tomó los pasos necesarios para proteger la salud y seguridad de los trabajadores y del público en general durante los trabajos de excavación. Estos pasos incluyeron:

- La instalación de carteleros o boletines de información al final de la calle Tidewater y Bowles Court.
- La creación de un sistema codificado con colores para notificar a los residentes y a los padres de familia si, en un día cualquiera, National Grid estaba haciendo excavaciones. Esta información se anunciaba a diario en las carteleros de información.
- El monitoreo del aire para identificar compuestos y polvo durante las actividades de excavación en los seis lugares alrededor del perímetro del sitio Tidewater, incluyendo un lugar fijo cerca de las residencias ubicadas en la calle Thorton. National Grid colocó semanalmente en los boletines la información del monitoreo del aire.
- La implementación de un sistema telefónico de mensajes de alerta para comunicar a personas claves la información que debe saberse de inmediato; por ejemplo: si la lectura de la calidad del aire durante las actividades de

Ya ha concluido la mayor parte de las excavaciones relacionadas a la modernización de la subestación eléctrica Tidewater.

excavación excede los límites conservadores establecidos para el proyecto.

## La manera en la que RIDEM tomará en cuenta la recomendación del plan de remediación presentado por National Grid

En julio, 2011, National Grid le presentó a RIDEM una Evaluación de Remediación Alterna (RAE, en inglés), en donde comparaba cuatro opciones para el sitio de Tidewater. Recomendamos seguir adelante con una de las opciones, la cual incluiría:

- Instalar en todo el sitio dos cubiertas de suelo, conocidas como capas fabricadas.
- Instalar una pared subterránea para proteger al río Seekonk de posibles movimientos de NAPL [fase de líquidos no acuosos]. Los NAPL son líquidos que no se mezclan muy bien con el agua, como por ejemplo: el aceite vegetal.
- Remover los residuos de MGP de áreas seleccionadas del sitio.

El próximo paso de RIDEM es revisar el plan recomendado por National Grid.

## La implementación del Plan de Participación del Público (PIP, en inglés), el primero en su tipo en Rhode Island

Nos comprometemos a compartir información durante el transcurso de nuestro trabajo en el sitio de Tidewater, tanto ahora como en el futuro. Muchas de las actividades de comunicación que hemos tenido las hemos incorporado al Plan de Participación del Público (PIP), el primero en el Estado. Un PIP es un acuerdo entre el público y la parte que está llevando

a cabo actividades de remediación sobre la manera en que la información se compartirá con la comunidad. También incluye la forma en la que el público puede presentar comentarios relacionados al plan que se tiene para el sitio. Cada PIP se redacta específicamente para un lugar. Un PIP se puede poner al día para que contenga los temas o retos adicionales que pudieran surgir durante el proceso de remediación.

Elementos del PIP de National Grid para el sitio de Tidewater:

<p><b>Notificación pública</b></p> <ul style="list-style-type: none"> <li>• Una lista de distribución postal para anunciar reuniones públicas, distribuir hojas de información, etc.</li> <li>• Lista opcional de correos electrónicos:             <ul style="list-style-type: none"> <li>- Inscríbese en <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>- También puede solicitar inscripción a National Grid (vea la información de contacto que a continuación se indica.)</li> </ul> </li> </ul>	<p><b>Hojas de información y aumento en la comunicación</b></p> <ul style="list-style-type: none"> <li>• Hojas de información para comunicar nueva información y/o el logro de acontecimientos importantes.</li> <li>• Información en boletines de información (colocados al final de la calle Tidewater y Bowles Court)</li> <li>• Un sistema telefónico de mensajes de alerta.</li> </ul>
<p><b>Reuniones comunitarias</b></p> <ul style="list-style-type: none"> <li>• Alienta la participación de todos para crear una atmósfera constructiva, abierta al diálogo.</li> </ul>	<p><b>Depositarios de información:</b></p> <ul style="list-style-type: none"> <li>• Acceso al público del expediente del sitio             <ul style="list-style-type: none"> <li>- RIDEM, Caso No. 95-022</li> <li>- <a href="http://www.dem.ri.gov/topics/filerevw.htm">http://www.dem.ri.gov/topics/filerevw.htm</a></li> </ul> </li> <li>• Sitios en la red             <ul style="list-style-type: none"> <li>- <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>- <a href="http://www.dem.ri.gov/programs/benviron/waste/tide.htm">http://www.dem.ri.gov/programs/benviron/waste/tide.htm</a></li> </ul> </li> <li>• Depositario local de la información             <ul style="list-style-type: none"> <li>- Biblioteca de Pawtucket (13 calle Summer)</li> </ul> </li> <li>• Boletines de información: calle Tidewater y Bowles Court</li> </ul>

### Una sesión de información a la comunidad programada para marzo del 2013

National Grid está trabajando con RIDEM y GZA GeoEnvironmental, Inc. (GZA), esta última una compañía consultora en Providence, para finalizar el PIP del programa de remediación del sitio de Tidewater. En marzo del 2013, National Grid tendrá una sesión de información a la comunidad para presentar información sobre el lugar. Al concluir la sesión, National Grid y RIDEM tendrán la primera reunión comunitaria en los siguientes 60 días después que RIDEM le emita a National Grid una Carta del Programa para el lugar. La Carta del Programa es el medio formal por el que se da a conocer la información contenida en el Informe de Investigación del Sitio (SIR) y así iniciar el periodo de comentarios públicos.

ACTIVIDAD	PERIODO DE TIEMPO
Sesión de información a la comunidad	Dentro de 60 días de la reunión para presentar el borrador del PIP
Primera reunión comunitaria	Dentro de 60 días de haberse recibido la Carta del Programa emitida por RIDEM – durante el periodo de comentarios públicos del Informe de Investigación del Sitio (SIR)
Reunión pública sobre el BORRADOR del Plan de Aprobación de Acciones de Remediación (RAWP, en inglés)	Dentro de los 12 meses de recibirse la Carta de Decisión de la Remediación
Se presenta el RAWP a RIDEM para su aprobación	Dentro de los 6 meses de la reunión sobre el BORRADOR de RAWP
Reunión pública antes de comenzar el proyecto	En un mínimo de 30 días antes de que comiencen los trabajos.
Reunión pública durante la remediación	Reunión programada a presentarse con propósitos de conversaciones una vez que RIDEM haya establecido y aprobado el horario de remediaciones
Reunión pública al completarse el proyecto	Dentro de los 30 días después de haberse completado la remediación

#### De haber preguntas o comentarios

Para obtener más información sobre las actividades de National Grid en ese lugar, por favor comuníquese con Michele Leone al 781-907-3651 ó [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com) o visite nuestro sitio en la red [www.tidewatersite.com](http://www.tidewatersite.com)

04 de março de 2013

Arquivo GZA nº 05.0043654.20

Ref: Notificação aos Donos de Propriedades Vizinhas e Partes Interessadas  
Sessão de Divulgação à Comunidade  
Previamente, Tidewater Facility  
Pawtucket, Rhode Island  
Caso nº 95-022 RIDEM

Aos donos de propriedades vizinhas e/ou partes interessadas:

Em nome da Companhia Elétrica Narragansett, sob o nome comercial National Grid (National Grid), a GZA GeoEnvironmental, Inc. (GZA) preparou esta carta para informá-los sobre uma sessão de divulgação à comunidade em Tidewater Site a ser realizada na **quarta-feira, 27 de março, das 18:30h às 20:30h, na Francis J. Varieur Elementary School, localizada em 486 Pleasant Street, Pawtucket, Rhode Island.** Esta notificação está sendo fornecida a donos de propriedades vizinhas, residentes das vizinhanças e partes interessadas da nossa lista de divulgação. Caso você seja dono de uma propriedade que esteja alugada, solicitamos que forneça uma cópia desta carta aos seus inquilinos.

Esta sessão de divulgação à comunidade faz parte dos esforços da National Grid para manter as pessoas informadas sobre as atividades ambientais em Tidewater Site. O formato da sessão será informal, apresentando cartazes informativos sobre uma variedade de tópicos relacionados ao local, inclusive a história de Tidewater Site, os resultados das investigações, demonstrações de certos equipamentos do campo, descrição de operações atuais da National Grid na propriedade, etc. Para cada cartaz haverá um representante da National Grid e/ou da GZA para responder perguntas. Representantes do Departamento de Gestão Ambiental de Rhode Island (sigla em inglês, RIDEM) também estarão presentes para responder perguntas do público.

Caso queira mais informações ou tenha alguma dúvida, por favor, entre em contato com Michele Leone da National Grid pelo telefone 781-907-3651 ou [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com). Para solicitar um intérprete para a sessão, por favor, entre em contato com a Michele até 18 de março.

Sinceramente,

GZA GeoEnvironmental, Inc.

Michele Leone, National Grid

# SEGURANÇA EM PRIMEIRO LUGAR

o antigo Tidewater MGP e Electric Generation Site

Nos últimos anos, a National Grid tem trabalhado sob a direção do Departamento de Gestão Ambiental de Rhode Island (sigla em inglês, RIDEM) para conduzir avaliações ambientais no antigo Tidewater Site e nas propriedades vizinhas. Estas propriedades incluem porções a leste do Campo Atlético Max Read, de propriedade da Cidade de Pawtucket.

Sabemos que a comunidade próxima a Tidewater Site, assim como pais e professores em Varietur e outras escolas próximas, estão preocupados com os subprodutos criados por uma fábrica de gás manufaturado (sigla em inglês, MGP) que operou no local de 1880 até a década de 60, e querem saber mais sobre como a National Grid planeja remediar estes subprodutos. A National Grid continuará a distribuir estes tipos de boletins informativos na comunidade, como parte dos esforços da empresa para manter as pessoas informadas sobre as atividades ambientais no local.

## Conclusão das escavações associadas à obra da subestação elétrica

A National Grid concluiu a maior parte das escavações associadas à obra destinada a atualizar a subestação elétrica existente que opera em Tidewater Site. Uma vez que as avaliações identificaram a presença de uma pequena quantidade de contaminação no solo no local, a National Grid tomou medidas para proteger a saúde e a segurança dos trabalhadores e do público em geral durante o trabalho de escavação. Estas medidas incluíram:

- Instalação de quadros de boletins informativos nos finais da Tidewater Street e Bowles Court.
- Desenvolvimento de um sistema de codificação por cores para notificar os residentes e pais se a National Grid estava conduzindo atividades de escavação em qualquer dia. Esta informação era colocada diariamente nos quadros de boletins.
- Monitoramento do ar para compostos e pó durante as atividades de escavação em seis locais ao redor do perímetro de Tidewater Site, inclusive um local fixo perto das residências na Thornton Street. A National Grid colocou os dados sobre o monitoramento do ar nos quadros de boletins semanalmente.
- Implementação de um sistema de alerta de mensagens por telefone para comunicar informações urgentes às partes interessadas, como, por exemplo, se as leituras da qualidade do ar excedessem os limites conservadores do projeto durante as atividades de terraplenagem.

*A maior parte das escavações associadas à atualização da subestação elétrica existente de Tidewater está concluída.*

## RIDEM considerando a opção corretiva recomendada da National Grid

A National Grid submeteu uma Remedial Alternative Evaluation (RAE) – Avaliação Alternativa Corretiva ao RIDEM em julho de 2011, comparando quatro opções para Tidewater Site. Recomendamos prosseguir com uma das opções, que envolveria:

- Instalação de duas coberturas do solo, chamadas “engineered caps”, pelo site.
- Instalação de uma parede subterrânea para proteger o Rio Seekonk do possível movimento de NAPLs. NAPLs são líquidos que não se misturam bem com a água, como óleo vegetal.
- Remoção dos resíduos de MGP de áreas seletas do Site.

A próxima etapa é o RIDEM analisar o plano recomendado da National Grid.

## Implementação do Plano de Envolvimento Público (sigla em inglês, PIP), o primeiro deste tipo em Rhode Island

Por todo o nosso trabalho em Tidewater Site, agora e no futuro, nos comprometemos a compartilhar as informações. Muitas das atividades de comunicação que assumimos têm sido incorporadas ao primeiro Plano de Envolvimento Público (sigla em inglês, PIP) do estado. Um PIP é um acordo entre uma parte conduzindo atividades de remediação e o público sobre como as informações serão compartilhadas com a comunidade. Ele também aborda como o público pode comentar sobre os planos para o Site. Os PIPs são adaptados para locais específicos. Um PIP pode ser atualizado para refletir problemas ou desafios adicionais que possam surgir durante o processo corretivo.

Elementos do PIP da National Grid para Tidewater Site:

<p><b>Notificação pública:</b></p> <ul style="list-style-type: none"> <li>• Lista de divulgação para anunciar reuniões públicas, distribuir boletins informativos, etc.</li> <li>• Lista opcional de e-mail           <ul style="list-style-type: none"> <li>- Inscreva-se em <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>- Ou, envie solicitação à National Grid (veja informações de contato abaixo)</li> </ul> </li> </ul>	<p><b>Boletins informativos e comunicações avançadas:</b></p> <ul style="list-style-type: none"> <li>• Boletins informativos para comunicar novas informações e/ou conquista de marcos significativos</li> <li>• Quadros de boletins informativos (colocados no final da Tidewater Street e Bowles Court)</li> <li>• Sistema de alerta de mensagens por telefone</li> </ul>
<p><b>Reuniões com a comunidade:</b></p> <ul style="list-style-type: none"> <li>• Incentiva a participação de todos para criar uma atmosfera de diálogo aberto e construtivo</li> </ul>	<p><b>Repositórios de informações:</b></p> <ul style="list-style-type: none"> <li>• Arquivo do Site acessível publicamente           <ul style="list-style-type: none"> <li>- Caso nº 95-022 RIDEM</li> <li>- <a href="http://www.dem.ri.gov/topics/filerevw.htm">http://www.dem.ri.gov/topics/filerevw.htm</a></li> </ul> </li> <li>• Websites           <ul style="list-style-type: none"> <li>- <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>- <a href="http://www.dem.ri.gov/programs/benviron/waste/tide.htm">http://www.dem.ri.gov/programs/benviron/waste/tide.htm</a></li> </ul> </li> <li>• Repositório local de informações           <ul style="list-style-type: none"> <li>- Pawtucket Library (13 Summer St.)</li> </ul> </li> <li>• Quadros de boletins: Tidewater Street e Bowles Court</li> </ul>

### Sessão de informações à comunidade planejada para março de 2013

A National Grid está trabalhando com o RIDEM e a GZA GeoEnvironmental, Inc. (GZA), uma firma de consultoria ambiental em Providence, para finalizar o PIP e um programa corretivo para Tidewater Site. A National Grid realizará uma sessão de divulgação à comunidade em março de 2013 para apresentar as informações sobre o Site. Após esta sessão, a National Grid e o RIDEM realizarão uma reunião inicial com a comunidade dentro de 60 dias após o RIDEM emitir uma Carta do Programa à National Grid para o Site. A Carta do Programa divulga formalmente os resultados do Site Investigation Report (SIR) (Relatório de Investigação do Site) para um período para comentário público.

ATIVIDADE	PERÍODO DE TEMPO
Sessão de divulgação à comunidade	Dentro de 60 dias da reunião da Minuta do PIP
Reunião inicial com a comunidade	Dentro de 60 dias do recebimento da Carta do Programa do RIDEM– durante o período para comentários públicos relativo ao Relatório de Investigação do Site (SIR)
Reunião pública sobre a Minuta do Plano de Aprovação da Ação Corretiva (sigla em inglês, RAWP)	Dentro de 12 meses do recebimento da Carta de Decisão Corretiva
Submeter RAWP para aprovação do RIDEM	Dentro de 6 meses da Reunião da Minuta do RAWP
Reunião pública antes de iniciar o projeto	Mínimo de 30 dias antes do começo da obra
Reuniões públicas durante a remediação	Programação da reunião a ser apresentada para fins de discussão quando a programação corretiva estiver desenvolvida e aprovada pelo RIDEM
Reunião pública quando da conclusão do projeto	Dentro de 30 dias após a conclusão da remediação

#### Se você tem dúvidas e comentários

Para obter mais informações sobre as atividades da National Grid no local, por favor, entre em contato com Michele Leone pelo telefone 781-907-3651 ou [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com), ou visite nosso website em [www.tidewatersite.com](http://www.tidewatersite.com).

Re: Notice to Abutter  
Supplemental Site Investigation Work Plan Addendum – Soil Gas Quality  
Former Tidewater Facility  
Pawtucket, Rhode Island  
RIDEM Case No. 95-022

530 Broadway  
Providence  
Rhode Island  
02909  
401-421-4140  
Fax: 401-751-8613  
<http://www.gza.com>

Dear Abutter:

The purpose of this letter is to notify you that The Narragansett Electric Company d/b/a National Grid (National Grid) will be conducting additional environmental testing activities associated with the former Tidewater Manufactured Gas Plant (MGP) and the former Pawtucket No. 1 Power Station Site located at the ends of Tidewater and Merry Streets in Pawtucket, Rhode Island. This notice is being provided to abutting property owners, tenants and members of the Tidewater Site mailing list in accordance with requirements established in the Rhode Island Department of Environmental Management's (RIDEM) Rules and Regulation for the Investigation and Remediation of Hazardous Materials (Remediation Regulations). Should you be an owner of property that is leased, we request that you provide a copy of this letter to your tenants.

National Grid is going to test the air beneath the ground at the Site. We will insert about 23 probes into the ground on the property. In certain areas along the western portion of the property, the probes will be installed outside of the existing fence line on National Grid property. The samples will be collected in enclosed air sampling canisters. We will then test and analyze the air samples. Analysis of the air samples will be completed off-Site at a licensed laboratory.

Contractors will begin installing probes on or about July 1, 2013. It will take approximately 4 to 5 days to install the probes and another 2 to 3 days to collect the samples. The results of the evaluation will be submitted to RIDEM and posted to the Tidewater and RIDEM websites (<http://www.tidewatersite.com> and <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>).

The proposed activities are further detailed in a *Supplemental Site Investigation Work Plan (SSIWP) Addendum* submitted to RIDEM in May 2013. There is a 14-day comment period, commencing with the date of delivery of this notice, during which the public may review RIDEM records pertaining to this property and submit written comments regarding the proposed investigation activities described herein. These activities will be conducted in accordance with RIDEM's Remediation Regulations and will be performed by GZA GeoEnvironmental, Inc. (GZA) on behalf of National Grid.

If you would like more information or have any questions, please contact Michele Leone of National Grid at 781-907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

<http://www.gza.com>

Estimado vecino aledaño:

El propósito de esta carta es para informarle que The Narragansett Electric Company, conocida también como National Grid (National Grid), estará llevando a cabo otras actividades de evaluación con respecto a los lugares anteriormente conocidos como Tidewater Manufactured Gas Plant (MGP, por sus siglas en inglés) y la Pawtucket Planta de Energía No. 1, localizadas al final de las calles Tidewater y Merry en Pawtucket, Rhode Island. Para cumplir con los requisitos establecidos por el Departamento de Control Ambiental de Rhode Island (RIDEM) en su emisión de Reglas y Regulaciones para la Investigación y Remediación de Materiales Peligrosos (Regulaciones de Remediación), se envía este aviso a todos los dueños de propiedades aledañas, inquilinos y miembros de la lista de contactos por correo. Si usted fuera dueño de alguna propiedad que está en arrendamiento, le pedimos que entregue una copia de esta carta a sus inquilinos.

National Grid va a analizar el aire que se encuentra debajo del suelo en el sitio en cuestión. Se instalarán como 23 sondas en el suelo de la propiedad. En algunas áreas localizadas en la parte oeste de la propiedad, las sondas se instalarán fuera de la actual línea de la barda de la propiedad de National Grid. Las muestras se guardarán en contenedores cerrados para muestras de aire. Luego examinaremos y analizaremos las muestras de aire. El análisis de las muestras de aire se llevará a cabo en otro lugar, es decir, en un laboratorio autorizado.

Los contratistas comenzarán a instalar las sondas como para el 1 de julio, 2013. La instalación de las sondas les tomará aproximadamente de 4 a 5 días y coleccionar las muestras les llevará de 2 a 3 días. Los resultados de la evaluación serán presentados a RIDEM y se darán a conocer en los sitios cibernéticos de Tidewater y RIDEM (<http://www.tidewatersite.com> y <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>)

Las actividades que se proponen están más detalladas en la publicación *Supplemental Site Investigation Work Plan (SSIWP) Addendum* presentado a RIDEM en mayo, 2013. Habrá un periodo de 14 días para comentarios, el cual comenzará en la fecha en que se entregue este aviso; durante ese periodo, el público puede revisar los archivos que RIDEM tiene con respecto a esta propiedad y podrá presentar comentarios escritos con respecto a las actividades de investigación que se proponen y que se describen aquí. Estas actividades se harán de acuerdo a las Regulaciones de Remediación de RIDEM y, a nombre de National Grid, serán llevadas a cabo por GZA GeoEnvironmental, Inc. (GZA).

Si usted desea obtener más información o desea hacer alguna pregunta, por favor comuníquese con Michele Leone de National Grid al 781-907-3651.

Muy atentamente,

Ref: Notificação aos donos de propriedades adjacentes  
Adendo ao Plano de Trabalho de Investigação Complementar no Local – Qualidade do Gás do Solo  
Previamente Tidewater Facility  
Pawtucket, Rhode Island  
Caso nº 95-022 RIDEM

Prezados donos de propriedades adjacentes,

O objetivo desta carta é notificá-los de que a Companhia Elétrica Narragansett, sob o nome comercial National Grid (National Grid) estará conduzindo atividades adicionais de testes ambientais associadas à antiga Fábrica de Gás Manufaturado Tidewater (sigla em inglês, MGP) e ao antigo local da Central Elétrica Pawtucket Nº 1, localizados no final das ruas Tidewater e Merry em Pawtucket, Rhode Island. Esta notificação está sendo enviada aos donos das propriedades adjacentes, inquilinos e membros da lista de mala direta da Tidewater Site, de acordo com os requisitos estabelecidos nas Regras e regulamentação para a investigação e remediação de materiais perigosos (Regulamentações de Remediação) do Departamento de Gestão Ambiental de Rhode Island (sigla em inglês, RIDEM). Caso seja dono de uma propriedade que está alugada, solicitamos que forneça uma cópia desta carta aos seus inquilinos.

A National Grid vai testar o ar sob o solo no local. Inseriremos cerca de 23 sondas no solo na propriedade. Em certas áreas ao longo da parte oeste da propriedade, as sondas serão instaladas fora da linha da cerca existente na propriedade da National Grid. As amostras serão coletadas em recipientes fechados para a amostragem de ar. Então, testaremos e analisaremos as amostras de ar. A análise das amostras de ar será concluída fora do local em um laboratório licenciado.

Os empreiteiros começarão a instalar as sondas em 1º de julho de 2013 ou próximo a esta data. Levará aproximadamente 4 a 5 dias para que as sondas sejam instaladas e outros 2 a 3 dias para a coleta das amostras. Os resultados da avaliação serão apresentados ao RIDEM e publicados nos sites da Tidewater e da RIDEM (<http://www.tidewatersite.com> e <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>).

As atividades propostas estão mais detalhadas em um *Adendo ao Plano de Trabalho de Investigação Complementar no Local* (sigla em inglês, SSIWP) apresentado ao RIDEM em maio de 2013. Há um período de 14 dias para comentários, começando a partir da data da entrega desta notificação, durante o qual o público pode analisar os registros do RIDEM referentes a esta propriedade e apresentar comentários por escrito relativos às atividades propostas de investigação aqui descritas. Estas atividades serão conduzidas de acordo com as Regulamentações de Remediação do RIDEM e serão executadas pela GZA GeoEnvironmental, Inc. (GZA), em nome da National Grid.

Caso queiram mais informações ou tenham alguma dúvida, por favor, entrem em contato com Michele Leone da National Grid pelo telefone 781-907-3651.

Sinceramente,

GZA GEOENVIRONMENTAL, INC.

Margaret S. Kilpatrick, P.E.  
Gerente Sênior de Projetos

James J. Clark, P.E.  
Diretor

## TIDEWATER SITE

### Assessing the Quality of Soil Gas Near Neighboring Properties

Recently, National Grid completed additional environmental tests, specifically sampling and analyzing the air beneath the ground at the Former Tidewater Manufactured Gas Plant (MGP) and Electric Generation Site. These "soil gas" tests, conducted in response to community requests and under the direction of the Rhode Island Department of Environmental Management (RIDEM), measure the level of contaminants present in air below the ground.

The purpose of the testing was to measure the quality of soil gas at interior Site locations and along the property's western boundary in order to assess the quality of soil gas near neighboring properties. As described below, the testing results do not indicate any concerns related to migration of soil gas from the Tidewater Site.

#### The Testing Process

GZA GeoEnvironmental, Inc. (GZA), on behalf of National Grid, conducted the activities consistent with the *Supplemental Site Investigation Work Plan (SSIWP)*, which was submitted to RIDEM in May 2013. Forty-one soil gas probes were installed into the ground on the property between July 8th and 11th, and on August 22nd, 2013. In certain areas along the western portion of the property, the probes were installed outside of the existing fence line, but still on National Grid property. (Probe locations are shown on Figure 1 – Supplemental Site Investigations, Soil Gas Locations, which is posted on the Tidewater website at [www.tidewatersite.com/wp-content/uploads/2012/08/Figure-1.pdf](http://www.tidewatersite.com/wp-content/uploads/2012/08/Figure-1.pdf).)

During the collection of soil gas samples, 10 samples of air were also collected near the probe locations to measure background contaminant levels in the surrounding air. Five air samples were collected at the bulletin board located on Tidewater Street and another five at the bulletin board located at the end of Bowles Court.

After installing the probes, air was vacuumed from them into specially designed, sealed containers. Samples were then sent to a licensed laboratory for testing.

#### The Test Results

The results of the interior soil gas testing are consistent with previous soil and groundwater testing at the Tidewater Site. While certain compounds were detected at low levels, none of

*The results of the interior soil gas testing are consistent with previous soil and groundwater testing at the Tidewater Site. None of the perimeter soil gas readings exceeded regulatory criteria established by the Connecticut Department of Energy and Environmental Protection, which RIDEM uses.*

the 32 perimeter soil gas readings exceeded regulatory criteria established by the Connecticut Department of Energy and Environmental Protection (CTDEEP) for both residential and industrial/commercial settings. (Rhode Island does not have regulatory criteria for soil gas quality.) The results showed the closer the samples got to the boundary of the Site, the lower the concentrations of these compounds.

Results of the background air testing are summarized in Table 1 (Summary of Ambient Air Sampling), which is posted on the Tidewater website at [www.tidewatersite.com/wp-content/uploads/2012/08/Tables-08282013.pdf](http://www.tidewatersite.com/wp-content/uploads/2012/08/Tables-08282013.pdf), along with Table 2 (Summary of Perimeter Soil Gas Sampling), Table 3 (Summary of Interior Soil Gas Sampling) and Table 4 (Summary of QA/QC Sampling).

#### Next Steps

National Grid is committed to keeping neighbors, the nearby schools and parents informed about our activities at the Former Tidewater MGP and Electric Generation Site. The results of this testing do not suggest any concerns related to migration of soil gas from the Tidewater Site to the neighboring community. We are currently preparing a comprehensive report describing this soil gas study and the results. We anticipate submitting this report to RIDEM in mid- to late September 2013. This comprehensive report will also be posted on the Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)).

#### Questions and Comments

If you would like more information on National Grid's activities at the Site, or would like to sign up for the Tidewater mailing list for future announcements, please contact Michele Leone from National Grid at 781-907-3651 or [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com).

## TIDEWATER SITE

Avaliando a qualidade do gás no solo perto das propriedades vizinhas

Recentemente, a National Grid concluiu testes ambientais adicionais, especificamente tirando amostras e analisando o ar sob o solo das antigas instalações da Tidewater Manufactured Gas Plant (MGP) e Electric Generation. Estes testes de “gás no solo”, conduzidos em atenção a solicitações da comunidade e sob a direção do Departamento de Gestão Ambiental de Rhode Island (RIDEM), medem o nível de contaminantes no ar sob o solo.

O objetivo do teste era medir a qualidade do gás no solo em locais no interior das instalações e ao longo da divisa oeste da propriedade a fim de avaliar a qualidade do gás no solo perto de propriedades vizinhas. Conforme descrito abaixo, os resultados do teste não indicaram nenhuma preocupação relacionada à migração do gás no solo da Tidewater.

### O processo do teste

A GZA GeoEnvironmental, Inc. (GZA), representando a National Grid, conduziu as atividades de modo consistente com o Adendo ao Plano de Trabalho de Investigação Complementar no Local, que foi apresentado ao RIDEM em maio de 2013. Foram instaladas 41 sondas para gás no solo da propriedade entre 8 e 11 de julho e em 22 de agosto de 2013. Em certas áreas ao longo da parte oeste da propriedade, as sondas foram instaladas fora da linha da cerca existente, mas ainda na propriedade da National Grid (os locais das sondas são mostrados na Figura 1 – Investigações Complementares no Local, Gás no Solo, que está publicada no site da Tidewater em [www.tidewatersite.com/wp-content/uploads/2012/08/Figure-1.pdf](http://www.tidewatersite.com/wp-content/uploads/2012/08/Figure-1.pdf)).

Durante a coleta das amostras do gás no solo, 10 amostras de ar também foram coletadas perto dos locais das sondas para medir os níveis de contaminação ambiental no ar circundante. Foram coletadas cinco amostras de ar em cada um dos quadros de boletins informativos localizados na Tidewater Street e no fim da Bowles Court.

Após a instalação das sondas, o ar foi aspirado para receptáculos vedados e especialmente projetados. As amostras foram então enviadas para um laboratório licenciado para testes.

*Os resultados do teste de gás no solo são consistentes com os testes anteriores do solo e da água subterrânea nas instalações da Tidewater. Nenhuma das leituras de gás no solo do perímetro excedeu os critérios normativos estabelecidos pelo Departamento de Energia e Proteção Ambiental de Connecticut, que o RIDEM usa.*

### Os resultados do teste

Os resultados do teste de gás no solo são consistentes com testes anteriores do solo e da água subterrânea nas instalações da Tidewater. Embora certos compostos tenham sido detectados em níveis baixos, nenhuma das 32 leituras de gás no solo do perímetro excedeu os critérios normativos estabelecidos pelo Departamento de Energia e Proteção Ambiental de Connecticut para ambientes residenciais e industriais/comerciais (Rhode Island não tem critérios normativos para a qualidade de gás no solo). Os resultados mostraram que, quanto mais perto da divisa das instalações, mais baixas as concentrações destes compostos nas amostras.

Os resultados dos testes de ar ambiental estão resumidos na Tabela 1 (Resumo da amostragem do ar ambiental), que está publicada no website da Tidewater em [www.tidewatersite.com/wp-content/uploads/2012/08/Tables-08282013.pdf](http://www.tidewatersite.com/wp-content/uploads/2012/08/Tables-08282013.pdf), junto com a Tabela 2 (Resumo da amostragem de gás no solo do perímetro), Tabela 3 (Resumo da amostragem de gás no solo) e Tabela 4 (Resumo da amostragem QA/QC – garantia de qualidade e controle de qualidade).

### Próximos passos

A National Grid compromete-se a manter os vizinhos, as escolas próximas e os pais informados a respeito das nossas atividades nas antigas instalações da Tidewater Manufactured Gas Plant (MGP) e Electric Generation. Os resultados deste

teste não sugerem quaisquer preocupações relacionadas à migração de gás no solo da Tidewater para a comunidade vizinha. Estamos preparando atualmente um relatório abrangente descrevendo este estudo do gás no solo e os resultados. Esperamos apresentar este relatório ao RIDEM do meio ao fim de setembro de 2013. Este relatório abrangente também será publicado no website da Tidewater ([www.tidewatersite.com](http://www.tidewatersite.com)).

#### Perguntas e Comentários

Se você gostaria de obter mais informações sobre as atividades da National Grid no local, ou gostaria de subscrever à lista de correspondência da Tidewater para futuras comunicações, por favor, entre em contato com Michele Leone da National Grid pelo telefone 781-907-3651 ou [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com).

## FÁBRICA TIDEWATER

### Evaluación de la calidad del gas del suelo cerca de propiedades vecinas

Recientemente, National Grid finalizó las pruebas ambientales adicionales, que constaron específicamente de la toma de muestras y el análisis del aire debajo del suelo en las antiguas instalaciones del Sitio Tidewater Manufactured Gas Plant (MGP) and Electric Generation Site. Estas pruebas de “gas del suelo”, llevadas a cabo en respuesta a los pedidos de la comunidad y bajo la dirección del Departamento de Gestión Ambiental de Rhode Island (RIDEM, por sus siglas en inglés), miden el nivel de contaminación presente en el aire debajo del suelo.

El objetivo de la prueba era medir la calidad del gas del suelo en el interior de la fábrica y a lo largo del límite oeste de la propiedad, a fin de evaluar la calidad del gas del suelo cerca de las propiedades vecinas. Como se indica a continuación, los resultados de las pruebas no presentan ningún indicio de fugas de gas del suelo del Sitio Tidewater.

#### El proceso de prueba

GZA GeoEnvironmental, Inc (GZA), en nombre de National Grid, llevó a cabo las actividades de acuerdo con el Plan de Trabajo de Investigación Complementario en el Sitio (SSIWP, por sus siglas en inglés), el cual fue presentado ante el RIDEM en mayo de 2013. Se instalaron en el suelo de la propiedad 41 sondas de gas del suelo entre el 8 y el 11 de Julio, y el 22 de agosto de 2013. En determinadas áreas a lo largo de la zona oeste de la propiedad, las sondas se instalaron por fuera del alambrado existente, pero aún en propiedad de National Grid. (Las zonas de las sondas se muestran en la Figura 1: Investigaciones complementarias en el Sitio, zonas de gas del suelo. La figura se encuentra publicada en el sitio web de Tidewater [www.tidewatersite.com/wp-content/uploads/2012/08/Figure-1.pdf](http://www.tidewatersite.com/wp-content/uploads/2012/08/Figure-1.pdf)).

Durante la recolección de muestras de gas del suelo, también se tomaron 10 muestras de aire cerca de las zonas de las sondas para medir los niveles básicos de contaminación en el ambiente. Se tomaron 5 muestras de aire en el tablero de anuncios ubicado en la calle Tidewater Street y otras cinco en el tablero de anuncios ubicado al final de Bowles Court.

Luego de instalar las sondas, el aire se extrajo por aspiración de las sondas y se colocó en recipientes especialmente

*Los resultados de las pruebas de gas del interior del suelo concuerdan con las pruebas de suelo y agua subterránea que se realizaron anteriormente en el Sitio de Tidewater. Ninguna de las lecturas de gas del suelo en el perímetro excedió los criterios regulatorios establecidos por el Departamento de Energía y Protección del Medio Ambiente de Connecticut, las cuales el RIDEM utiliza.*

diseñados y sellados. Después de esto, las muestras se enviaron a un laboratorio autorizado para realizar las pruebas.

#### Los resultados de las pruebas

Los resultados de las pruebas de gas del interior del suelo concuerdan con las pruebas de suelo y agua subterránea que se realizaron anteriormente en el Sitio de Tidewater. Si bien se detectaron niveles bajos de algunos compuestos, ninguna de las 32 lecturas de gas del suelo en el perímetro excedió los criterios regulatorios establecidos por el Departamento de Energía y Protección del Medio Ambiente (CTDEEP) para zonas residenciales e industriales/comerciales. (Rhode Island no tiene un criterio regulatorio para evaluar la calidad de gas del suelo). Los resultados mostraron que mientras más cerca se encontraban las muestras del límite del Sitio, menos concentración de estos compuestos presentaban.

Los resultados de las muestras básicas de aire se encuentran resumidos en la Tabla 1 (Resumen de muestras de aire ambiente), publicada en el sitio web [www.tidewatersite.com/wp-content/uploads/2012/08/Tables-08282013.pdf](http://www.tidewatersite.com/wp-content/uploads/2012/08/Tables-08282013.pdf), junto con la Tabla 2 (Resumen de muestras de gas del interior del suelo en el perímetro), en la Tabla 3 (Resumen de muestras de gas del interior del suelo) y en la Tabla 4 (Resumen de muestras de control de calidad).

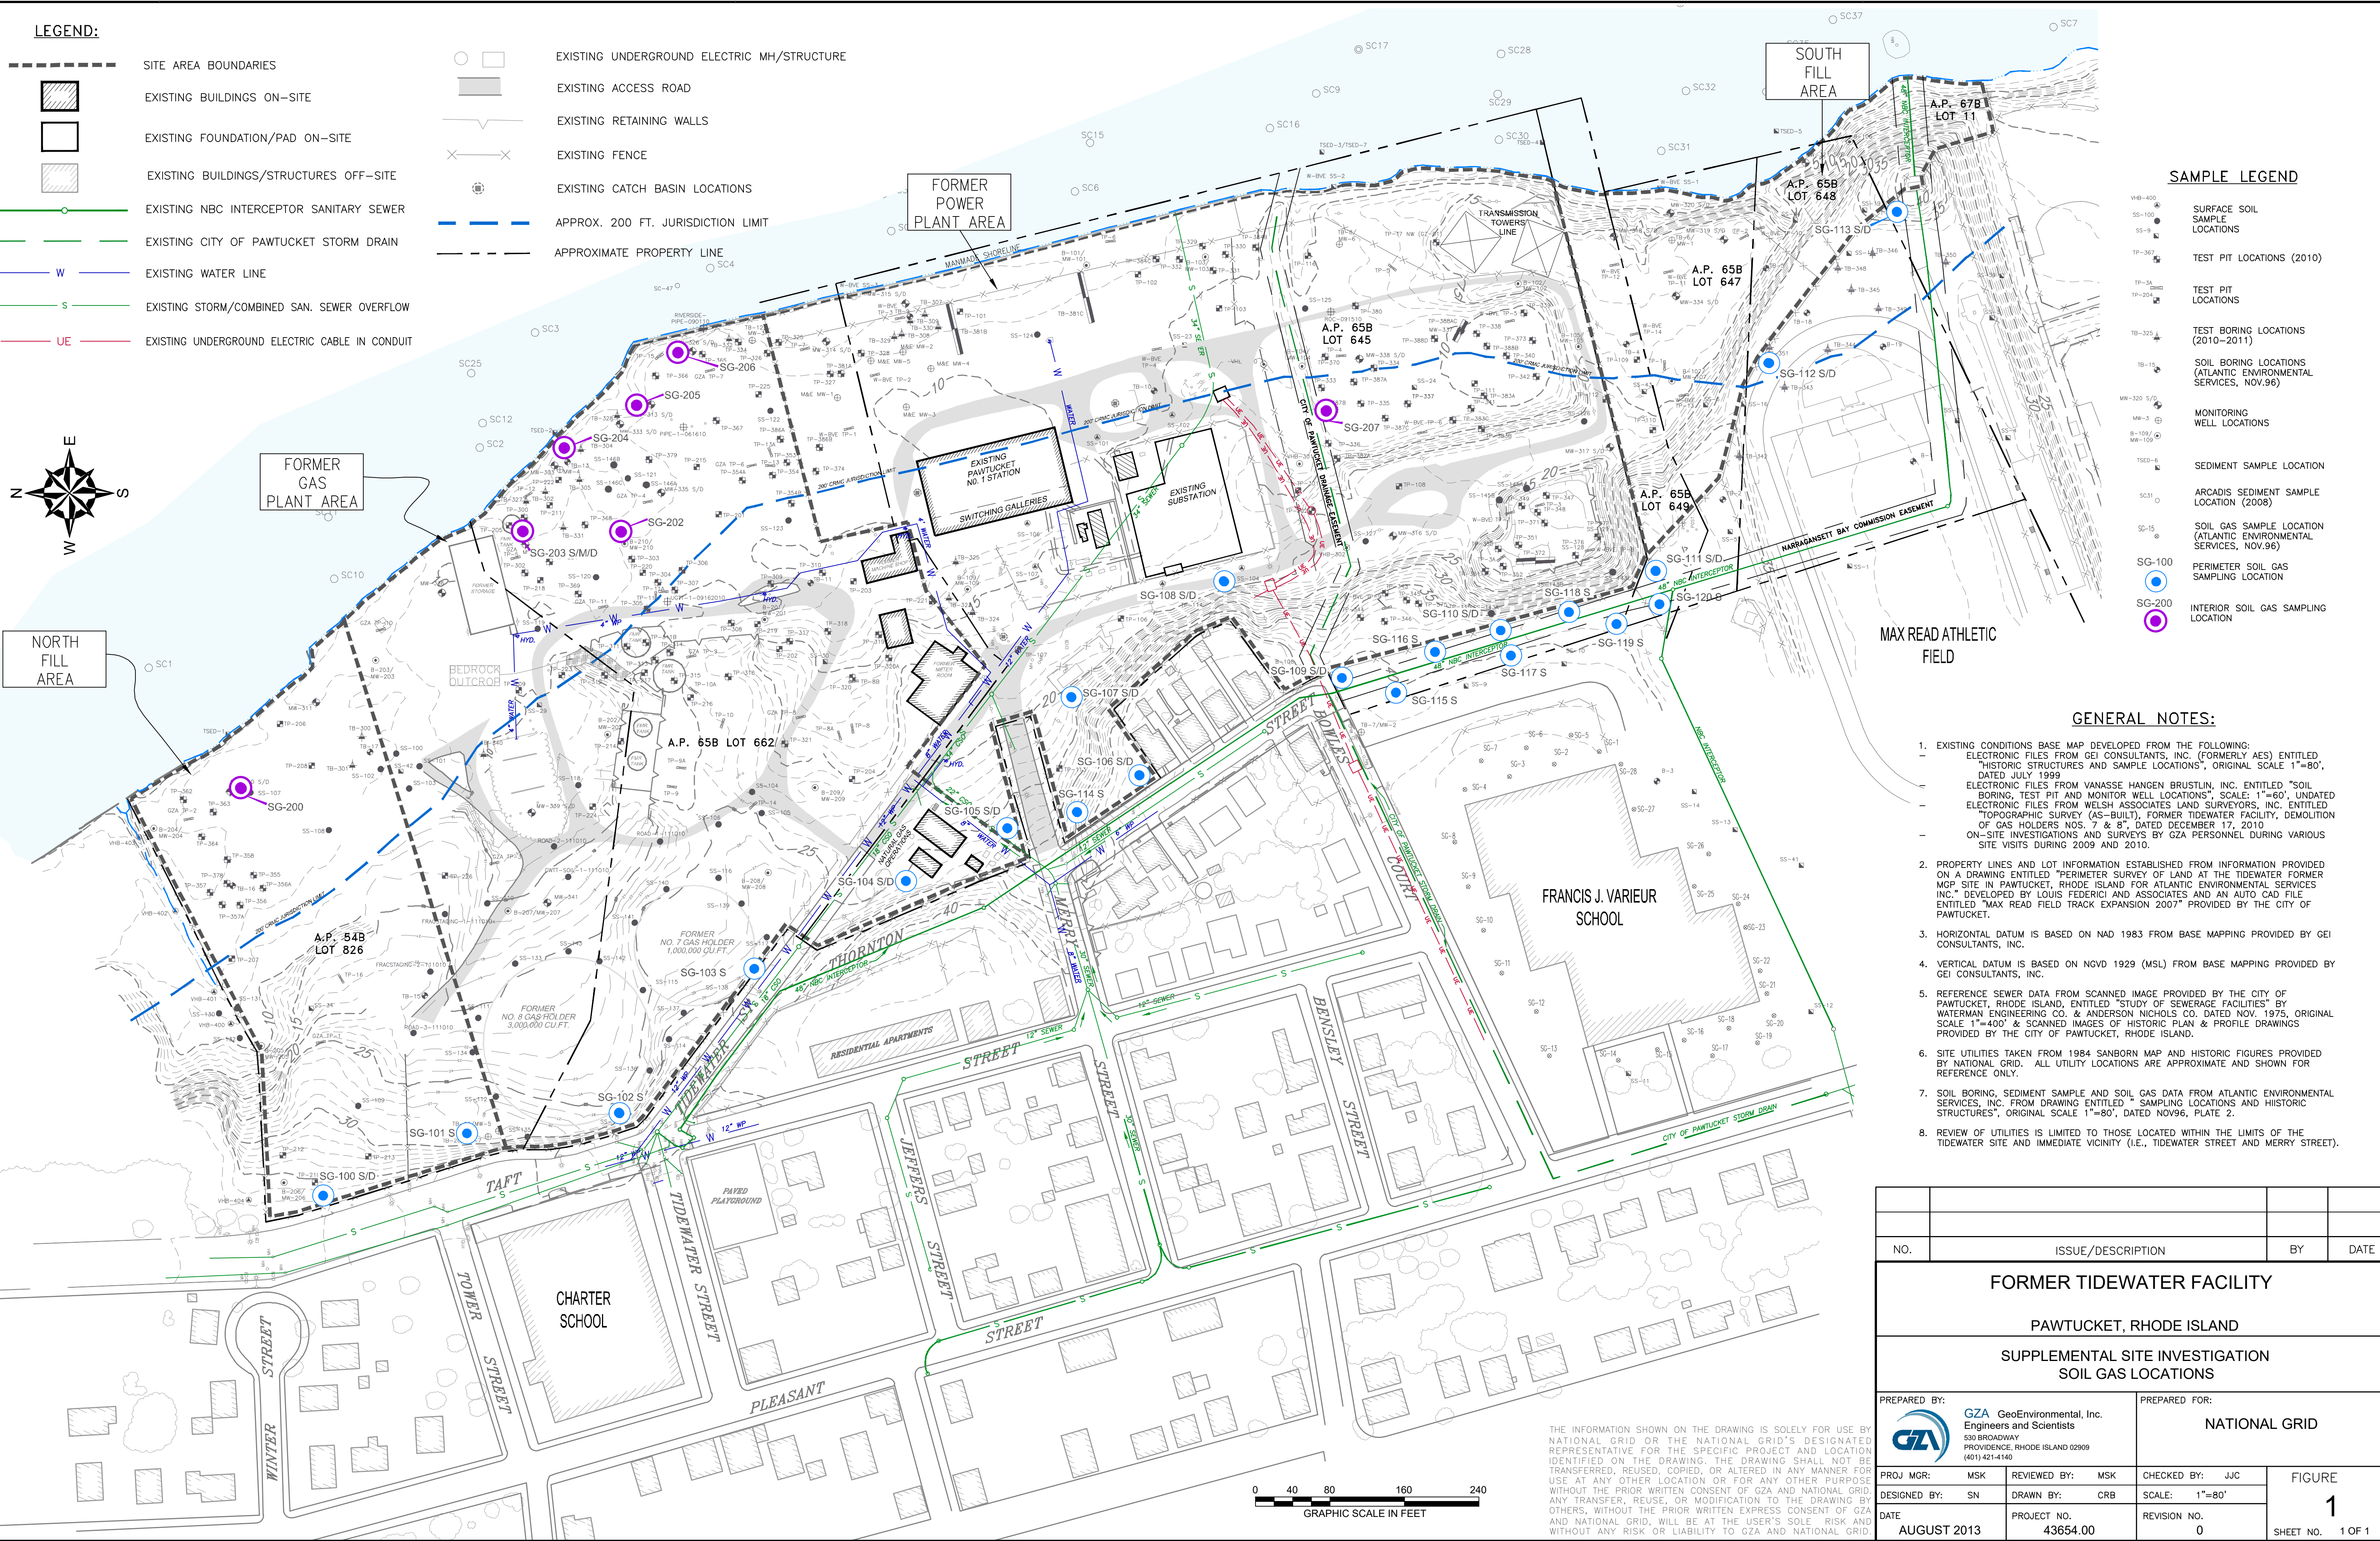

## Siguientes pasos

El compromiso de National Grid es mantener informados a los vecinos, a las escuelas cercanas y a los padres acerca de nuestras actividades en el antiguo Sitio Tidewater MGP and Electric Generation Site. Los resultados de estas pruebas no presentan indicios de fugas de gas del suelo del Sitio Tidewater hacia la comunidad vecina. Actualmente, estamos realizando un informe exhaustivo que describe este estudio de gas del suelo y los resultados. Prevemos la entrega del informe al RIDEM entre mediados y fines de septiembre de 2013. Este informe también estará disponible en el sitio web de Tidewater ([www.tidewatersite.com](http://www.tidewatersite.com)).

## Preguntas y comentarios

Notes:  
 NE - Not Established  
 CTDEEP residential and industrial/commercial criteria is obtained from the 2008 Connecticut Remediation Criteria: Technical Support Document Appendix J published by the CTDEEP.  
 CTDEEP Criteria is presented in the 2008 Connecticut Remediation Criteria: Technical Support Document Appendix J - Table I6 and J8 in parts per million (ppmv) with adjustments presented for analytical capabilities and maximum values. To obtain criteria in mg/m<sup>3</sup> units, ppmv criteria is multiplied by the molecular weight of the compound divided by 24.45 (a conversion factor). The mg/m<sup>3</sup> criteria is multiplied by 1000 to obtain µg/m<sup>3</sup>.

Notes:

NE - Not Established

Red text indicates an exceedance of CTDEEP residential criteria

A bold bordered cell indicates an exceedance of CTDEEP industrial/commercial criteria.

CTDEEP residential and industrial/commercial criteria is obtained from the 2008 Connecticut Remediation Criteria: Technical Support Document Appendix J published by the CTDEEP.

CTDEEP Criteria is presented in the 2008 Connecticut Remediation Criteria: Technical Support Document Appendix J - Table J6 and J8 in parts per million (ppmv) with adjustments presented for analytical capabilities and maximum values. To obtain criteria in mg/m<sup>3</sup> units, ppmv criteria is multiplied by the molecular weight of the compound divided by 24.45 (a conversion factor). The mg/m<sup>3</sup> criteria is multiplied by 1000 to obtain µg/m<sup>3</sup>.

Notes:  
 NE - Not Established  
 CTDEEP residential and industrial/commercial criteria is obtained from the 2008 Connecticut Remediation Criteria: Technical Support Document Appendix J published by the CTDEEP.  
 CTDEEP Criteria is presented in the 2008 Connecticut Remediation Criteria: Technical Support Document Appendix J - Table J6 and J8 in parts per million (ppmv) with adjustments presented for analytical capabilities and maximum values. To obtain criteria in mg/m<sup>3</sup> units, ppmv criteria is multiplied by the molecular weight of the compound divided by 24.45 (a conversion factor). The mg/m<sup>3</sup> criteria is multiplied by 1000 to obtain µg/m<sup>3</sup>.

# HOW TO FIND MORE INFORMATION ABOUT THE TIDEWATER SITE

- **Local Informational Repository—Pawtucket Public Library**

The local information repository at the Pawtucket Public Library contains copies of submittals included on the RIDEM website listed below. Electronic copies of these submittals are sent to the repository on a monthly basis. Upon request, National Grid will provide hard copies of the material for the library.

- **Publicly Accessible Site File**

Files related to the Tidewater Site are maintained at RIDEM, Case No. 95-022.

- **RIDEM Document Listing Website:**

<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>

- **National Grid Document Listing and Informational Website:** [www.tidewatersite.com](http://www.tidewatersite.com)

- **Mailing List**

National Grid established a mailing list for the former Tidewater Site. The list includes abutting property owners, tenants, easement holders, municipalities and any other interested parties who have requested to be added to the list .

- **Email Distribution List**

Members of the mailing list, as well as other interested parties, have the option to receive information via email.

- **Phone Message Network**

National Grid has established a phone message network to distribute time-sensitive information to interested parties on air monitoring results during periods of active earth disturbing activities at the Site.

## If You Have Questions and Comments

For more information on activities at the site or to sign up for the phone/mailing/ emailing list, please contact Michele Leone at 781-907-3651 or [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com) or visit the website at [www.tidewatersite.com](http://www.tidewatersite.com)

# COMO ENCONTRAR MAIS INFORMAÇÕES

## SOBRE TIDEWATER SITE

- **Repositório local de informações— Biblioteca Pública de Pawtucket**

O repositório local de informações na Biblioteca Pública de Pawtucket contém cópias das submissões incluídas no site do RIDEM relacionado abaixo. As cópias eletrônicas destas submissões são enviadas ao repositório mensalmente. Mediante solicitação, a National Grid fornecerá cópias impressas do material para a biblioteca.

- **Arquivos públicos do site**

Os arquivos relativos ao Tidewater Site são mantidos no RIDEM, Caso No 95-022.

- **Site da lista de documentos do RIDEM:** <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>
- **Lista de documentos da National Grid e site informativo:** [www.tidewatersite.com](http://www.tidewatersite.com)

- **Lista para contato**

A National Grid estabeleceu uma lista de contatos para a antiga Tidewater Site. A lista inclui proprietários vizinhos, inquilinos, titulares de servidão, municipalidades e outras partes interessadas que solicitaram ser adicionadas à lista.

- **Lista de distribuição de e-mail**

Membros da lista de contato, assim como outras partes interessadas, têm a opção de receber informações por e-mail.

- **Rede de mensagens por telefone**

A National Grid estabeleceu uma rede de mensagens por telefone para distribuir informações suscetíveis ao tempo de resposta a partes interessadas sobre os resultados do controle de ar durante períodos de atividade que perturbam o terreno no Site.

### Se você tem dúvidas e comentários

Para mais informações sobre as atividades no local ou subscrever para a lista de telefone/correspondência/ email, contate Michele Leone em 781-907-3651 ou [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com) ou visite o site [www.tidewatersite.com](http://www.tidewatersite.com)

# CÓMO HALLAR MÁS INFORMACIÓN SOBRE EL SITIO TIDEWATER

- **Registro informativo local: Biblioteca Pública de Pawtucket**

El depósito de información local de la Biblioteca Pública de Pawtucket tiene copias de las sumisiones incluidas en el sitio cibernético de RIDEM que se indica a continuación. Las copias electrónicas de estas sumisiones son enviadas mensualmente al depósito. De solicitarse, National Grid proveerá copias en papel del material para la biblioteca.

- **Archivo del sitio accesible al público**

Los archivos relacionados con el Sitio Tidewater se mantienen en el RIDEM, Caso No. 95-022.

- **Sitio web de los listados de documentos del RIDEM:** <http://www.dem.ri.gov/programs/benviron/waste/tide.htm>

- **Sitio web informativo y de listado de documentos de National Grid:** [www.tidewatersite.com](http://www.tidewatersite.com)

- **Lista de correo**

National Grid estableció una lista de correo para el ex Sitio Tidewater. La lista del sitio incluye propietarios de propiedades lindantes, inquilinos, tenedores de servidumbres, municipalidades y toda otra parte interesada que haya solicitado ser agregada a la lista.

- **Lista de distribución**

Los miembros de la lista de correo, así como otras partes interesadas, tienen la opción de recibir la información por correo electrónico.

- **Red de mensajes telefónicos**

National Grid estableció una red de mensajes telefónicos para distribuir información urgente a las partes interesadas sobre los resultados de las supervisión del aire durante períodos de actividades en curso que alteran la tierra en el Sitio.

## Si tiene preguntas y comentarios

### **EXHIBIT III**

**RESPONSES TO SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS**

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS  
Former Tidewater Facility  
Pawtucket, Rhode Island

**Comments Received on June 19, 2012:**

---

**Meeting from 3p.m. to 3:30 p.m.:**

1. Interviewee inquired about availability of real-time air monitoring.

*Response: On a weekly basis, air monitoring data will be posted to the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and on the bulletin boards located at the end of Tidewater Street and the end of Bowles Court (the previous weekly data will be posted by the end of day the following Monday). This information will also be transmitted to RIDEM to be posted to the RIDEM-maintained website on an approximately weekly basis. In the event a sustained exceedance of a perimeter threshold level is observed, activation of the phone message alert system will be conducted and this information will also be posted on the National Grid web-site and on the bulletin boards within 48 business hours of collection. See section 4.40 for more information about INFORMATION REPOSITORIES.*

2. The interviewee asked if National Grid could make real-time air monitoring data available via a website with comparisons to the Rhode Island Department of Environmental Management's (RIDEM) Ambient Air Quality Standards.

*Response: Real-time monitoring typically evaluates levels of total volatile organic compounds, benzene and dust. Real time air monitoring will employ either portable hand held field equipment or fixed monitoring stations. Use of hand held versus fixed monitoring stations will be evaluated on a case-by-case basis based on scope of the earthwork project (i.e., level of remediation) and anticipated level of soil impacts. For the majority of earthwork projects at the Site, it is anticipated that real-time air monitoring will be completed using portable hand held field instruments. These hand held field instruments do not have the ability to post this data to a community website in real time. During remedial activities when fixed air monitoring stations are warranted, such as an Air Logics or RespondFast system, data from the fixed station(s) will be transmitted via telemetry to a central polling station computer. Once at the central computer, the data is automatically compared to pre-set warning/alarms levels and is used to call cell phones, pagers, issue alerts, etc. Please note, based on our discussions with Air Logics and our understanding of the RespondFast system used by Weston Solutions, the raw data from the central polling computer is not typically fed to a publically available web-page or other portal.*

*On a weekly basis, air monitoring data will be posted to the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and on the bulletin boards located at the end of Tidewater Street and the end of Bowles Court (the previous weekly data will be posted by the end of day the following Monday). This information will also be transmitted to RIDEM to be posted to the RIDEM-maintained website on an approximately weekly basis. In addition to activation of the phone*

## SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

*message alert system described above, in the event a sustained exceedance of a perimeter threshold level is observed, this information will also be posted on the National Grid web-site and on the bulletin boards within 48 business hours of collection. See section 4.40 for more information about INFORMATION REPOSITORIES.*

*In addition, National Grid will collect laboratory samples in accordance with the RIDEM-approved plan. National Grid will compare this data to RIDEM's Ambient Air Quality Standards and also post it online.*

3. Interviewee suggested public meetings to keep the neighborhood informed. Interviewee would like more active attempts to meet with people in the community and more communication with the schools and students' parents. The interviewee suggested reaching out to the Varieur School principal.

*Response: National Grid/GZA will continue to provide project information to the principals of neighboring schools (charter schools and the public school) for dissemination to teachers and parents. Due to privacy concerns, schools typically do not provide lists of students and parents and their contact information to outside entities. However, interested parents can go to the Tidewater/National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and sign up for updates. See Section 4.10 for more information about PUBLIC NOTICE. In addition, see Table 1 for a schedule of public meetings.*

4. What is best way to obtain information about Site? Interviewee indicated email for general information, hard copies for more details and mailers for neighborhood to ensure completeness.

*Response: National Grid will maintain a site-specific mailing list for the Tidewater Site and will add email addresses to the list as requested by the community. National Grid will use the mailing list to announce public meetings and availability of reports, and distribute fact sheets. These announcements and information will also be posted on the informational bulletin boards located at the end of Tidewater Street and at the end of Bowles Court. National Grid will also make electronic copies of all reports available on National Grid's and the Rhode Island Department of Environmental Management's (RIDEM) websites, as well as at the public library. National Grid will also provide hard copies of the reports at RIDEM's office and the public library upon request. See sections 4.10 and 4.40 for more information about PUBLIC NOTICE and INFORMATION REPOSITORIES.*

5. How often should information be sent out to community about Site? Interviewee indicated that frequency depends on work being conducted. Interviewee requested "door-to-door" fliers.

*Response: National Grid performed an initial walk of the neighborhood to distribute door knob fliers with information on how to join the mailing list in August 2012. This walk covered*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS  
Former Tidewater Facility  
Pawtucket, Rhode Island

*residences in the neighborhood as shown on the Figure 3 of the PIP. See sections 4.10 and 4.40 for more information about PUBLIC NOTICE and INFORMATION REPOSITORIES.*

6. What locations and times would be convenient for public meetings? Interviewee indicated that night is preferred and that current location (i.e., Blackstone Valley Visitor Center Theater) works.

*Response: National Grid will schedule meetings in the evening at either the Blackstone Valley Visitor Center or Varieur Elementary School, based on availability. The preferred location is Varieur Elementary School, which is within walking distance of the Tidewater Site. See section 4.30 for more information about COMMUNITY MEETINGS.*

7. Interviewee suggested that the National Grid/Tidewater Site be clearly indicated on mailers.

*Response: National Grid developed a "Tidewater Environmental Project" mailing label to more clearly identify correspondence related to the project. See section 4.10 for more information about PUBLIC NOTICE.*

**Meeting from 4p.m. to 4:30 p.m.:**

1. Interviewee requested that the local Housing and Urban Development (HUD) agency be added to the mailing list.

*Response: National Grid will add the local HUD agency to the mailing list, as discussed during subsequent communication with the interviewee. National Grid is waiting to be provided the contact information for the specific HUD agency requested by the interviewee. National Grid will continue to work with the interviewee to obtain this information.*

2. Interviewee suggested posting information in apartment buildings adjacent to the site.

*Response: National Grid has left messages with the interviewee/property manager regarding posting information within the apartment building regarding availability of the bulletin boards and mailings. National Grid will continue to work with them to arrange for the suggested postings, if acceptable.*

3. Interviewee inquired about a site tour at some point in the process.

*Response: National Grid will try to arrange for a limited tour of the site prior to the start of remediation. Given the active utility operations, such as the electrical substation and natural gas regulating station on the property, portions of the site will not be accessible to the public due to safety concerns. During the proposed community outreach session, National Grid will also present photographs and video of various areas of the site. See section 4.30 for more information about COMMUNITY MEETINGS.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

4. What is the best way to obtain information about site? Interviewee indicated a website should be used.

*Response: The Rhode Island Department of Environmental Management (RIDEM) will maintain all documents submitted to them regarding the Tidewater site on its website (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>). In addition, National Grid has established a Site-specific website ([www.tidewatersite.com](http://www.tidewatersite.com)) to provide information regarding the nature and history of MGPs, history and description of the Tidewater Site, and its regulatory background, site contacts and key project documents. National Grid will also post timely public updates on the current and proposed remediation activities at the site on its website. See section 4.40 for more information about INFORMATION REPOSITORIES.*

5. Which locations and times would be convenient for public meetings? Interviewee indicated that evening is best (between 6 p.m. and 7 p.m.).

*Response: National Grid will schedule meetings in the evening at either the Blackstone Valley Visitor Center or Variour Elementary School, based on availability. The preferred location is Variour Elementary School, which is within walking distance of the Tidewater Site. See section 4.30 for more information about COMMUNITY MEETINGS.*

6. Interviewee suggested a phone list for messages about the site.

*Response: National Grid will establish a phone message distribution network. National Grid will share how to join the phone message distribution network on its website ([www.tidewatersite.com](http://www.tidewatersite.com)). In addition, National Grid provided information about participating in the phone message distribution network to individuals on the mailing list in the public notice mailed in the end of October 2012. See section 4.10 for more information about PUBLIC NOTICE.*

**Meeting from 4:30 p.m. – 5:30 p.m.:**

1. Interviewee inquired about real-time air data and suggested that this data be available online.

*Response: Real-time monitoring typically evaluates levels of total volatile organic compounds, benzene and dust. Real time air monitoring will employ either portable hand held field equipment or fixed monitoring stations. Use of hand held versus fixed monitoring stations will be evaluated on a case-by-case basis based on scope of the earthwork project (i.e., level of remediation) and anticipated level of soil impacts. For the majority of earthwork projects at the Site, it is anticipated that real-time air monitoring will be completed using portable hand held field instruments. These hand held field instruments do not have the ability to post this data to a community website in real time. During remedial activities when fixed air monitoring stations are warranted, such as an Air Logics or RespondFast system, data from the fixed station(s) will be transmitted via telemetry to a central polling station computer. Once at the central*

Former Tidewater Facility  
Pawtucket, Rhode Island

*computer, the data is automatically compared to pre-set warning/alarms levels and is used to call cell phones, pagers, issue alerts, etc. Please note, based on our discussions with Air Logics and our understanding of the RespondFast system used by Weston Solutions, the raw data from the central polling computer is not typically fed to a publically available web-page or other portal.*

*On a weekly basis, air monitoring data will be posted to the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and on the bulletin boards located at the end of Tidewater Street and the end of Bowles Court (the previous weekly data will be posted by the end of day the following Monday). This information will also be transmitted to RIDEM to be posted to the RIDEM-maintained website on an approximately weekly basis. In addition to activation of the community phone message alert system described above, in the event a sustained exceedance of a perimeter threshold level is observed, this information will also be posted on the National Grid web-site and on the bulletin boards within 48 business hours of collection. See section 4.40 for more information about INFORMATION REPOSITORIES.*

*In addition, National Grid will collect laboratory samples in accordance with the RIDEM-approved plan. National Grid will compare this data to RIDEM's Ambient Air Quality Standards and also post it online.*

2. What is the best way to obtain information about the site? Interviewee indicated meetings, emails and website available in multi-lingual formats.

*Response: National Grid will schedule an initial community meeting and community outreach session to present background information, and discuss site conditions and public concerns about the proposed remedial strategy. In addition, National Grid will hold subsequent community meetings during the remediation process at specified project milestones, such as the Rhode Island Department of Environmental Management's (RIDEM) approval of the Remedial Action Work Plan, prior to remedy implementation and following completion of site-wide remediation. National Grid will schedule additional community meetings during the remedial process at the request of the community. See section 4.30 for more information about COMMUNITY MEETINGS.*

*National Grid will maintain a site-specific mailing list for the Tidewater site and will add email addresses to the mailing list as requested by the community. National Grid will use the mailing list to announce public meetings and the availability of reports, and distribute fact sheets. National Grid used the current mailing list to distribute a Notification Package in August 2012 to inform the public of the upcoming electrical substation upgrade project. As part of this notification in August 2012, National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list. This walk covered*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

*residences in the neighborhood as shown on the Figure 3 of the PIP. See section 4.10 for more information about PUBLIC NOTICE.*

*RIDEM will maintain all documents submitted to them regarding the Tidewater site on its website (<http://www.dem.ri.gov/programs/benviron/waste/tide.htm>). In addition, National Grid has established a site-specific website ([www.tidewatersite.com](http://www.tidewatersite.com)) to provide information regarding the nature and history of MGPs, historic background related to Tidewater, description of the Tidewater site and its regulatory background, site contacts and key project documents. National Grid will also post timely public updates on the current and proposed remediation activities at the Site on its website. See section 4.40 for more information about INFORMATION REPOSITORIES.*

*National Grid will provide mailings, fact sheets and other communications in both English and Spanish. In addition, all mailed communications will contain a translation header in multiple languages stating: "This is an important notice. Please have it translated." Upon request, National Grid will also provide translation assistance for non-English speaking individuals during public meetings.*

3. Interviewee indicated the need to engage members of the community.

*Response: National Grid acknowledges the need to engage community members and keep them informed about the planned investigations and remedial efforts at the Tidewater Site. National Grid has prepared a public involvement plan (PIP) to establish procedures for public and community communications about the Site. National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list in August 2012. This walk covered residences in the neighborhood as shown on the Figure 3 of the PIP. We understand that the Environmental Justice League will be undertaking door-to-door efforts as well.*

4. Interviewee suggested the use of bulletin boards and phone messages to get information to the community about the Site.

*Response: National Grid has installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. The bulletin boards will include all information distributed through the mailing list, as well as weekly updates during remedial work. Please note that if significant vandalism to the bulletin boards occurs, National Grid will look into alternative ways to share information. National Grid will establish a phone message distribution network. National Grid will share how to join the phone message distribution network on its website ([www.tidewatersite.com](http://www.tidewatersite.com)). In addition, National Grid will provide information about participating in the phone message distribution network to individuals on the mailing list. See section 4.10 for more information about PUBLIC NOTICE.*

*See section 4.10 for more information about PUBLIC NOTICE.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

6. Interviewee suggested the following information should be posted and available for the Site: contact information/responding to public comments/24-hour hotline.

*Response: National Grid will provide site contact information on its website and the informational bulletin boards at the end of Tidewater Street and Bowles Court. Community members can contact site representatives during normal business hours with any comments or questions. A listing of "frequently asked questions" will be maintained on National Grid's website (www.tidewatersite.com). See sections 4.10 and 4.40 for more information about PUBLIC NOTICE and INFORMATION REPOSITORIES.*

*All written public comments related to documents submitted to the Rhode Island Department of Environmental Management(RIDEM), as well as National Grid's response, will be documented in written form as required by RIDEM. National Grid will send a copy of responses to those who submitted comments and also place them in the information repository. Refer to section 4.30 for more information.*

7. Interviewee requested regular stakeholder meetings (limited group of 10 to 15 people).

*Response: National Grid will schedule an initial community meeting and community outreach session to present background information and discuss site conditions and public concerns about the proposed remedial strategy. In addition, National Grid will hold subsequent community meetings during the remediation process at specified project milestones, such as the Rhode Island Department of Environmental Management's (RIDEM) approval of the Remedial Action Work Plan, prior to remedy implementation and following completion of site-wide remediation. National Grid will schedule additional community meetings during the remedial process at the request of the community. Also, National Grid designed the public involvement plan (PIP) to involve all community members and interested parties. National Grid believes that the large number of public meetings and the commitment to schedule additional meetings on an as-needed basis pre-empts the need for smaller, stakeholder meetings. See section 4.30 for more information about COMMUNITY MEETINGS.*

8. Interviewee suggested timely communications with the community.

*Response: National Grid will post weekly updates during full-scale remedial work on the informational bulletin boards located at the end of Tidewater Street and at the end of Bowles Court, and on both the National Grid and the Rhode Island Department of Environmental Management (RIDEM) websites. See sections 4.10 and 4.40 for more information about PUBLIC NOTICE and INFORMATION REPOSITORIES.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

9. Interviewee suggested bulletin board at the site.

*Response: National Grid has installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. The bulletin boards will include certain information distributed through the mailing list, as well as weekly updates during remedial work. National Grid will also use the bulletin boards to announce public meetings, distribute fact sheets and communicate availability of reports. Please note that if significant vandalism to the bulletin boards occurs, National Grid will look into alternative ways to share information. See section 4.10 for more information about PUBLIC NOTICE.*

11. Interviewee inquired about potential issues that the public needs to be concerned about with the Tidewater Site.

*Response: The primary issue on the Tidewater Site is the potential for air quality issues during remedial implementation. National Grid's selected remedy is designed to limit these air quality impacts. In addition, National Grid will monitor air quality in accordance with a Rhode Island Department of Environmental Management (RIDEM)-approved plan and will provide this information to the public, as presented in the public involvement plan (PIP). See sections 4.10 and 4.40 for more information about PUBLIC NOTICE and INFORMATION REPOSITORIES.*

12. Interviewee suggested use of color-coded maps with impacts.

*Response: National Grid will prepare a simple color-coded map, which will be available on the National Grid website and on the informational bulletin boards. This map will also be presented at the community outreach session.*

13. Interviewee requested the use of more simple, nontechnical terms in communications.

*Response: National Grid's reports and communications to the Rhode Island Department of Environmental Management (RIDEM) are technical documents and as a result, cannot necessarily be simplified. However, National Grid will make every effort to use brief and nontechnical terminology in communications to the public, including in mailings, website information and bulletin board postings. In addition, National Grid will prepare simple executive summaries for major report submittals.*

14. Which locations and times would be convenient for public meetings? Interviewee suggested that the meeting location should be in the school or the neighborhood to achieve the highest attendance and also noted that evenings work well.

*Response: National Grid will schedule meetings in the evening at either the Blackstone Valley Visitor Center or Varieur Elementary School, based on availability. The preferred location is Varieur Elementary School, which is within walking distance of the Tidewater Site. See section 4.30 for more information about COMMUNITY MEETINGS.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

**Meeting from 5:30 p.m. to 6:30 p.m.:**

1. What is the best way to get information to people? Interviewee indicated that door to door in community would be best.

*Response: National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list in August 2012. This walk covered residences in the neighborhood as shown on the Figure 3 of the PIP. In addition, National Grid will post weekly updates during remedial work to the informational bulletin boards located at the end of Tidewater Street and at the end of Bowles Court, and on both the National Grid and the Rhode Island Department of Environmental Management (RIDEM) websites. See sections 4.10 for more information about PUBLIC NOTICE.*

2. Interviewee indicated that mail is better than email in the community.

*Response: National Grid will maintain a site-specific mailing list for the Tidewater site and will add email addresses to the list as requested by the community. National Grid will use the mailing list to announce public meetings and availability of reports, and distribute fact sheets. See section 4.10 for more information about PUBLIC NOTICE.*

3. Which locations and times would be convenient for public meetings? Interviewee indicated that the schools would be perfect since they are close and within walking distance. Interviewee also suggested meeting times in the early evening (5-6 p.m.).

*Response: National Grid will schedule meetings in the evening at either the Blackstone Valley Visitor Center or Varieur Elementary School, based on availability. The preferred location is Varieur Elementary School, which is within walking distance of the Tidewater Site. See section 4.30 for more information about COMMUNITY MEETINGS.*

4. Interviewee indicated that he is working with the Environmental Justice League in the community and suggested that door knocking is effective.

*Response: National Grid acknowledges the need to engage community members and keep them informed about the planned investigations and remedial efforts at the Tidewater site. National Grid has prepared a public involvement plan (PIP) to establish procedures for public and community communications about the site. As described in the PIP, National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list in August 2012. This walk covered residences in the neighborhood as shown on the Figure 3 of the PIP. We understand that the Environmental Justice League will be undertaking door-to-door efforts as well.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

5. Interviewee suggested providing information on air impacts in real time.

*Response: Real-time monitoring typically evaluates levels of total volatile organic compounds, benzene and dust. Real time air monitoring will employ either portable hand held field equipment or fixed monitoring stations. Use of hand held versus fixed monitoring stations will be evaluated on a case-by-case basis based on scope of the earthwork project (i.e., level of remediation) and anticipated level of soil impacts. For the majority of earthwork projects at the Site, it is anticipated that real-time air monitoring will be completed using portable hand held field instruments. These hand held field instruments do not have the ability to post this data to a community website in real time. During remedial activities when fixed air monitoring stations are warranted, such as an Air Logics or RespondFast system, data from the fixed station(s) will be transmitted via telemetry to a central polling station computer. Once at the central computer, the data is automatically compared to pre-set warning/alarms levels and is used to call cell phones, pagers, issue alerts, etc. Please note, based on our discussions with Air Logics and our understanding of the RespondFast system used by Weston Solutions, the raw data from the central polling computer is not typically fed to a publically available web-page or other portal.*

*On a weekly basis, air monitoring data will be posted to the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and on the bulletin boards located at the end of Tidewater Street and the end of Bowles Court (the previous weekly data will be posted by the end of day the following Monday). This information will also be transmitted to RIDEM to be posted to the RIDEM-maintained website on an approximately weekly basis. In addition to activation of the community phone message alert system described above, in the event a sustained exceedance of a perimeter threshold level is observed, this information will also be posted on the National Grid web-site and on the bulletin boards within 48 business hours of collection. See section 4.40 for more information about INFORMATION REPOSITORIES.*

*In addition, National Grid will collect laboratory samples in accordance with the RIDEM-approved plan. National Grid will compare this data to RIDEM's Ambient Air Quality Standards and also post it online.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS  
Former Tidewater Facility  
Pawtucket, Rhode Island

**Comments Received on June 20, 2012:**

---

**Meeting from 6p.m. to 7p.m.:**

1. What is the best way to communicate information to the public? Interviewee indicated that easy-to-understand information needs to be available via a website. Interviewee also inquired about the risks posed by the Site to the community during remedial activities.

*Response: National Grid will make every effort to use brief and nontechnical terminology in communications to the public, including in mailings, website information and bulletin board postings. In addition, National Grid will prepare simple executive summaries for major report submittals.*

*In addition, National Grid will provide easy-to-understand information on its website and make it easy to find. In addition, National Grid will make project updates available on both the website and the community bulletin boards. National Grid will also provide contact information for individuals the public can contact for additional information or with questions.*

*The primary issue on the Tidewater site is the potential for air quality issues during remedial implementation. National Grid's selected remedy is designed to limit these air quality impacts. National Grid will monitor air quality in accordance with a Rhode Island Department of Environmental Management (RIDEM)-approved plan and will provide this information to public, as presented in the public involvement plan (PIP). See sections 4.10 and 4.40 for more information about PUBLIC NOTICE and INFORMATION REPOSITORIES. In addition, National Grid may also encounter issues related to truck traffic and management of contaminated material during the remedial and implementation process. National Grid will discuss these issues further during the remedial process outreach and community meetings.*

2. Interviewee suggested installing a community bulletin board at either the Site or school.

*Response: National Grid has installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. The bulletin boards will include certain information distributed through the mailing list, as well as weekly updates during remedial work. National Grid will also use the bulletin boards to announce public meetings, distribute fact sheets and communicate availability of reports. See section 4.10 for more information about PUBLIC NOTICE.*

3. Interviewee inquired about availability of real-time air monitoring online.

*Response: Real-time monitoring typically evaluates levels of total volatile organic compounds, benzene and dust. Real time air monitoring will employ either portable hand held field equipment or fixed monitoring stations. Use of hand held versus fixed monitoring stations will be evaluated on a case-by-case basis based on scope of the earthwork project (i.e., level of*

See section 4.40 for more information about INFORMATION REPOSITORIES.*

*In addition, National Grid will collect laboratory samples in accordance with the RIDEM-approved plan. National Grid will compare this data to RIDEM's Ambient Air Quality Standards and also post it online.*

4. Should regular communications be performed during the cleanup process? Interviewee requested ongoing meetings.

*Response: National Grid will schedule an initial community meeting and community outreach session to present background information and discuss site conditions and public concerns about the proposed remedial strategy. In addition, National Grid will hold subsequent community meetings during the remediation process at specified project milestones, such as the Rhode Island Department of Environmental Management's (RIDEM) approval of the Remedial Action Work Plan, prior to remedy implementation and following completion of Site-wide remediation. National Grid will schedule additional community meetings during the remedial process at the request of the community. See section 4.30 for more information about COMMUNITY MEETINGS.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

5. Interviewee requested color-coded map of contamination.

*Response: National Grid will prepare simple color-coded map depicting the distribution of site impacts. National Grid will make these maps available on its website and the informational bulletin boards. This map will also be presented at the community outreach session.*

**Meeting from 7p. m. to 7:20 p.m.:**

1. What is the best way to communicate information to the public? Interviewee prefers email and Internet.

*Response: National Grid will maintain a site-specific mailing list for the Tidewater site and will add email addresses to the list as requested by the community. National Grid will use the mailing list to announce public meetings and availability of reports, and distribute fact sheets. See section 4.10 for more information about PUBLIC NOTICE.*

*In addition, National Grid will establish a public website, which will include site-specific information, including timely public updates on current and future remediation activities at the site. See section 4.40 for more information about INFORMATION REPOSITORIES.*

2. Which locations and times would be convenient for public meeting? Interviewee indicated that the current venue at the Blackstone Valley Visitor Center is okay and the evenings are better.

*Response: National Grid will schedule meetings in the evening at either the Blackstone Valley Visitor Center or Varieur Elementary School, based on availability. The preferred location is Varieur Elementary School, which is within walking distance of the Tidewater Site. See section 4.30 for more information about COMMUNITY MEETINGS.*

3. Interviewee suggested flyers/mailings. Interviewee requested expansion of abutter list for mailings.

*Response: National Grid will maintain a site-specific mailing list for the Tidewater site and will add email addresses to list as requested by the community. National Grid will use the mailing list to announce public meetings and availability of reports, and distribute fact sheets. National Grid will also post these announcements and information to the informational bulletin boards located at the end of Tidewater Street and at the end of Bowles Court. National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list in August 2012. This walk covered residences in the neighborhood as shown on the Figure 3 of the PIP. See section 4.10 for more information about PUBLIC NOTICE.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

**Meeting from 7:20 p.m. to 8:30 p.m.:**

1. Interviewee requested that on Site remedial activities be completed during hours that school is not in session.

*Response: The proposed construction schedule for the comprehensive Site remedy spans approximately two years. Because the work involves earthwork machinery, night work would require extensive lighting and involve significant noise, which would likely be unacceptable to neighboring residents. Further, if construction only took place during the summer when school is not in session, the construction schedule would triple, taking six summers to complete rather than two years.*

2. Interviewee indicated that information is hard to decipher and understand, and requested preparation of simple documents.

*Response: National Grid's reports and communications to the Rhode Island Department of Environmental Management (RIDEM) are technical documents and as a result, cannot necessarily be simplified. However, National Grid will make every effort to use brief and nontechnical terminology in communications to the public, including in mailings, website information and bulletin board postings. In addition, National Grid will prepare simple executive summaries (approximately one to two pages) for major report submittals.*

3. What is the best way to communicate information to the public? Interviewee suggested community mailings.

*Response: National Grid will maintain a site-specific mailing list for the Tidewater Site. In addition, National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list in August 2012. This walk covered residences in the neighborhood as shown on the Figure 3 of the PIP. National Grid will add email addresses to the mailing list as requested by the community and use the mailing list to announce public meetings and availability of reports, and distribute fact sheets. National Grid will also post these announcements and information on the informational bulletin boards located at the end of Tidewater Street and at the end of Bowles Court. See section 4.10 for more information about PUBLIC NOTICE.*

4. Interviewee requested community bulletin board.

*Response: National Grid installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. The bulletin boards will include certain information distributed through the mailing list, as well as weekly updates during remedial work. National Grid will also use the bulletin boards to announce public meetings, distribute fact sheets and communicate availability of reports. See section 4.10 for more information about PUBLIC NOTICE.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

5. Interviewee requested means of understanding hazards. Requested Risk Characterization to possibly include:

- a. Child/adult exposure scenarios
- b. Discussion of the risks associated with different contaminants. (Interviewee expressed concern about compounds and available information on the Internet)
- c. Comparative risk to assist in explaining levels of risk to the community

*Response: National Grid will conduct remedial work at the site in a manner that limits hazards to onsite workers and off-site community members. Further, there are no complete exposure pathways for soil and groundwater impacts for offsite receptors because National Grid has secured the site with a locked chain link fence. National Grid will address potential air quality risks during implementation of the full-scale remedial approach. National Grid will provide more details about air quality and other potential risks as the process evolves and prior to implementation of full-scale remediation work.*

6. Interviewee requested map of Site/contaminants/hazards.

*Response: National Grid will prepare simple color-coded map depicting the distribution of impacts at the site. National Grid will make these maps available on its website and the informational bulletin boards. This map will also be presented at the community outreach session.*

7. Should regular communications be performed during the cleanup process? Interviewee requested regular meetings during remediation.

*Response: National Grid will hold community meetings during the remediation process at specified project milestones, such as the Rhode Island Department of Environmental Management's (RIDEM) approval of the Remedial Action Work Plan, prior to remedy implementation and following completion of site-wide remediation. National Grid will schedule additional community meetings during the remedial process at the request of the community. See section 4.30 for more information about COMMUNITY MEETINGS.*

8. Interviewee suggested special communications with the schools. Interviewee indicated that communications should be through the principals.

*Response: National Grid will continue to provide project information to the principals of neighboring schools (charter schools and the public school) for dissemination to teachers and parents. Due to privacy concerns, schools typically do not provide lists of students and parents and their contact information to outside entities. However, interested parents can go to the Tidewater/National Grid website and sign up for updates. See section 4.10 for more information about PUBLIC NOTICE.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

9. Interviewee suggested that a vehicle be established for questions (i.e., a hotline).

*Response: National Grid will provide site contact information on its website and the information bulletin boards at the end of Tidewater Street and Bowles Court. Community members can contact site representatives during normal business hours with any comments or questions. A listing of "frequently asked questions" will be maintained on National Grid's website (www.tidewatersite.com). See sections 4.10 and 4.40 for more information about PUBLIC NOTICE and INFORMATION REPOSITORIES.*

10. Interviewee would prefer if National Grid did not hold the Community PIP Draft Meeting during the summer months.

*Response: Due to community members' vacation schedules during the summer months; National Grid is not planning the community outreach session for August or September. National Grid will likely hold the meeting in the fall.*

11. Interviewee requested that National Grid make frequently asked questions available if a hotline is used.

*Response: National Grid will provide site contact information on its website and the information bulletin boards at the end of Tidewater Street and Bowles Court. Community members can call Site contacts during normal business hours with any comments or questions. A listing of "frequently asked questions" will be maintained on National Grid's website (www.tidewatersite.com). See section 4.10 for more information about PUBLIC NOTICE.*

12. Interviewee suggested flyers on doors.

*Response: National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list in August 2012. This walk covered residences in the neighborhood as shown on the Figure 3 of the PIP. In addition, National Grid will post weekly updates during remedial work to the informational bulletin boards located at the end of Tidewater Street and at the end of Bowles Court, and on both the National Grid and Rhode Island Department of Environmental Management (RIDEM) websites. See section 4.10 for more information about PUBLIC NOTICE.*

13. Interviewee suggested use of Tidewater logo on all mailings.

*Response: National Grid developed a "Tidewater Environmental Project" mailing label to more clearly identify correspondence related to the project. See section 4.10 for more information about PUBLIC NOTICE.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

14. Should regular communications be performed during the cleanup process? Interviewee agreed with meetings at milestones during remediation.

*Response: National Grid will hold community meetings during the remediation process at specified project milestones, such as the Rhode Island Department of Environmental Management's (RIDEM) approval of the Remedial Action Work Plan, prior to remedy implementation and following completion of site-wide remediation. National Grid will schedule additional community meetings during the remedial process at the request of the community. See section 4.30 for more information about COMMUNITY MEETINGS.*

15. Which locations and times would be convenient for public meetings? Interviewee indicated that schools may be more convenient.

*Response: National Grid will schedule meetings in the evening at either the Blackstone Valley Visitor Center or Varieur Elementary School, based on availability. The preferred location is Varieur Elementary School, which is within walking distance of the Tidewater site. See section 4.30 for more information about COMMUNITY MEETINGS.*

**Comments Received on June 27, 2012:**

---

Phone Interview 10 a.m. – 10:45 a.m.

1. Interviewee indicated that it is important to engage the community – suggested door knocking in collaboration with the Environmental Justice League.

*Response: National Grid acknowledges the need to engage community members and keep them informed about the planned investigations and remedial efforts at the Tidewater Site. National Grid has prepared a public involvement plan (PIP) to establish procedures for public and community communications about the Site. As described in the PIP, National Grid performed an initial walk of the neighborhood to distribute door knob flyers with information on how to join the mailing list in August 2012. This walk covered residences in the neighborhood as shown on the Figure 3 of the PIP. We understand that the Environmental Justice League will be undertaking door-to-door efforts as well.*

2. Interviewee indicated that all documents need to be written in simple, plain language.

*Response: National Grid's reports and communications to the Rhode Island Department of Environmental Management (RIDEM) are technical documents and as a result, cannot necessarily be simplified. However, National Grid will make every effort to use brief and nontechnical terminology in communications to the public, including in mailings, website information and bulletin board postings. In addition, National Grid will prepare simple executive summaries for major report submittals.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

3. Interviewee suggested translations in Spanish and Portuguese.

*Response: National Grid will provide mailings, fact sheets and other communications in both English and Spanish. In addition, all mailed communications will contain a translation header in multiple languages stating: "This is an important notice. Please have it translated." See section 4.20 for more information about ENHANCED COMMUNICATIONS.*

4. Which locations and times would be convenient for public meetings? Interviewee indicated evening meetings are preferable. Meeting locations should be as close to the neighborhood as possible.

*Response: National Grid will schedule meetings in the evening at either the Blackstone Valley Visitor Center or Varieur Elementary School, based on availability. The preferred location is Varieur Elementary School, which is within walking distance of the Tidewater Site. See section 4.30 for more information about COMMUNITY MEETINGS. See section 4.30 for more information about COMMUNITY MEETINGS.*

5. Interviewee suggested providing food and drink, as well as child care at meetings.

*Response: At this time, National Grid does not plan on providing food, drink, or child care at meetings.*

6. Interviewee suggested having translators at all meetings.

*Response: Upon request, National Grid will provide translation assistance for non-English speaking individuals. See section 4.30 for more information about COMMUNITY MEETINGS.*

7. Interviewee liked the bulletin board idea; thought more than two locations would be needed. Interviewee indicated that bulletin boards should include maps.

*Response: National Grid has installed informational bulletin boards at the end of Tidewater Street and at the end of Bowles Court. The bulletin boards will include certain information distributed through the mailing list, as well as weekly updates during remedial work. National Grid will also use the bulletin boards to announce public meetings, distribute fact sheets and communicate availability of reports. In addition, National Grid will post air monitoring data, color-coded maps and Site-related contact information. Please note that if significant vandalism to the bulletin boards occurs, National Grid will look into alternative ways to share information. See section 4.10 for more information about PUBLIC NOTICE.*

SITE-SPECIFIC COMMENTS FROM COMMUNITY INTERVIEWS

Former Tidewater Facility  
Pawtucket, Rhode Island

8. Interviewee indicated a need to make it clear that the entire site is addressed in the same manner when it comes to public involvement and the remedy.

*Response: The Rhode Island Department of Environmental Management (RIDEM) is currently reviewing National Grid's recommended remedy for the site. The remedy addresses the entire site in a consistent manner. Similarly, National Grid's environmental monitoring and controls during remedy implementation and post-remedial monitoring will be consistent across the entire site area.*

9. Interviewee indicated that the public must not only be informed on what has happened and what will happen, but also must have a voice on how things get done...follow-through on all public comments.

*Response: All written public comments related to documents submitted to the Rhode Island Department of Environmental Management (RIDEM), as well as National Grid's response, will be documented in written form. National Grid will send a copy of responses to those who submitted comments and also place them in the information repository. In addition, GZA will send a notice announcing the availability of the summary to the Site's mailing and email recipient lists. Refer to section 4.30 for more information.*

Re: Response to Public Comments  
Draft Public Involvement Plan  
Former Tidewater MGP and Power Plant Site  
Pawtucket, Rhode Island  
*RIDEM Case No. 95-022*

Dear Mr. Martella:

On behalf of our client, The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) has prepared this letter in response to written public comments to the November 26, 2012 draft Public Involvement Plan (PIP) prepared for the Former Tidewater Manufactured Gas Plant (MGP) and Power Plant Site located in Pawtucket, Rhode Island (the Site). These comments were provided to National Grid by the Rhode Island Department of Environmental Management (RIDEM) via a February 21, 2013 notification letter. As indicated in RIDEM's February 21, 2013 notification letter, RIDEM received the following written public comments to the draft PIP: 1) a letter dated January 28, 2013, from Ms. Holly Dygert; and 2) a letter dated February 12, 2013, from Ms. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI). For your convenience, the comments received are repeated below followed by National Grid's responses in *italics*. The RIDEM notification letter along with the two public comment letters is included as an attachment to this letter.

In addition, per RIDEM's February 2013 notification, attached to this letter are responses to public comments that we received during the January 29, 2013, public meeting held at the Francis Varieur Elementary School. These responses were submitted separately to RIDEM on February 15, 2013. This letter also includes updates to responses to audience comments from the January 29, 2013, meeting which were summarized in the February 15, 2013, submittal and responses to questions related to the PIP provided in an email dated March 6, 2013, from Ms. Holly Dygert. A copy of this March 6, 2013 email is also attached.

**January 28, 2013 Letter**

1. Comment: The information in the boards should be provided in the three primary languages of the community, which are English, Spanish and Portuguese. I was concerned that National Grid seemed to reject a request made during the interviews for information to be translated into both Spanish and Portuguese. I want to underscore the importance of providing information in the community's languages.

*Response: Going forward, National Grid will provide the following documents in English, Spanish and Portuguese: 1) Notification Mailings, 2) Fact Sheets and 3) Executive Summaries that will accompany future reports.*

2. Comment: I look forward to the incorporation of the color-coded alert system.

*Response: We implemented the color-coded alert system on the bulletin boards during the recent substation upgrade project. The system involves posting different color sheets to indicate when excavation is active (yellow sheet) and not active (blue sheet).*

3. Comment: I am very pleased that National Grid has proposed to create a color-coded map of Tidewater site hazards to the public as part of the PIP. Despite years of communications about the hazards on the site, the members of the stakeholder group are still unclear about concentrations of particular hazards, and where they are located. Thus, I am eager to see this map.

*Response: We are finalizing the color-coded map for the Tidewater project that illustrates areas of the Site where impacts have been identified in groundwater and soils and we will present it at the upcoming Community Information Session. The final map will also be posted on the National Grid website and the bulletin boards.*

4. Comment: In regards to the first concern, I agree with the characterization of a public involvement process laid out on page 1 of the Draft PIP, as “an agreement between the party conducting response actions and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the site.” This definition identifies the public as important partner in the remediation process. Since the public’s interests vis-à-vis the remediation process diverge in important ways from those of the property owner, the public must have the ability to shape the remediation, and the precautions that are taken during the remediation process. I am concerned, however, that the Draft PIP construes public participation narrowly, as informing the public about work plans that have already been developed.

For example, on page 8, in describing the process through which a final remediation plan for the site will be determined, the Draft PIP states that RIDEM will issue a Program Letter when it has concluded that “the site has been adequately assessed” in the Site Investigation Report. The Draft PIP continues that “Following receipt of the Program Letter, National Grid will notify [various parties]... that the investigation is complete and that RIDEM has concurred with the recommended remedial alternative... Subsequent to this public notification and following receipt of any public comments, the Department will issue a Remedial Decision Letter formally approving the SIR.” In this description, the identification and approval of a remedial strategy are depicted as occurring apart from public involvement. This negates the role of the public in the decision-making process. Moreover, I believe that it is a mischaracterization of the process through which remediation strategies are determined. It is my understanding that the Program Letter solely certifies that RIDEM has determined that the proposed remedy meets the criteria for an acceptable remedy. I understand that the final determination of a remedy cannot be made until members of the community are given an opportunity to consider the proposal, and to convey their concerns to RIDEM.

The characterization of the process through which a Remedial Action Work Plan (RAWP) is identified and selected in the Draft PIP similarly neglects the role of the public. Though the text states that “Many of the above remedial process steps will be accompanied by public meetings and comment periods” (p.8), I find it disconcerting that the public’s role in shaping the remediation process is not included in National Grid’s description of the decision-making process. This view of public involvement as a process whereby National Grid officials inform the public about the remediation process carries through to other sections of the Draft PIP. For example, in the section on Community Meetings, meetings are depicted as opportunities for National Grid representatives to inform community members about the work that has been and will be undertaken in the site. Though informing the community is crucial for facilitating their

involvement in the process, it is not sufficient. The document also states that meetings will be held “in conjunction with... Departmental approval of the Remedial Action Work Plan; [and]prior to remedy implementation” (p.14). This neglects the crucial role the public will have in shaping the RAWP.

The PIP should be revised to indicate clearly that potential work plans will be presented in community meetings, and that community concerns will be solicited to ensure that the final work plans reflect the concerns and needs of the public. Opportunities for community members to comment on the proposed plans and thereby shape the remediation process should be clearly laid out in the meeting agendas, and in the scheduling of meetings (in relation to RIDEM’s final decisions about work at the site).

*Response: We are committed to providing the community with opportunities to review and comment on National Grid’s plans to remediate the Tidewater Site. National Grid will revise the PIP to include a public meeting related to the draft Remedial Action Work Plan (RAWP – the document that will be submitted to RIDEM to present the details of how the remedy will be implemented) to provide further opportunity for the public to comment on the Site remediation process. The public meeting regarding the draft RAWP will be held within 12 months of receipt of the Remedial Decision Letter (RDL – letter issued by RIDEM to formally agree with the findings of the Site Investigation Report). This meeting will be held prior to the submittal of the final RAWP to RIDEM and will provide the public an opportunity to provide comment on the remedial strategy for the Tidewater Site. The process going forward and as outlined in the PIP is intended to provide a means of effective “two-way communication” between the public and National Grid. The Initial Community Meeting (which will follow RIDEM’s review of the Site Investigation Report) will provide the public an opportunity to provide comment on the conceptual remedial strategy for the Tidewater Site. The process outlined in the PIP, which follows the requirements of the Remediation Regulations, provides the public opportunity to comment on the remedial process; however, it is noted that RIDEM is ultimately responsible for the final remedial analysis and decisions on the final remedial strategy for the Site.*

5. Comment: In regards to my second concern, one of the requests most of the interviewees made was for National Grid to make data from air monitoring available in real time to the community. While meeting with representatives from National Grid and RIDEM during the early Fall of 2012, we learned that this was not possible with the particular hand held devices being used to monitor emissions during the current electrical substation upgrade. Moreover, RIDEM representatives at the meeting seemed to concur that the small-scale nature of the work and the limited extent of contaminants in the soil did not warrant the more costly kind of air monitoring technologies that enable real-time posting of readings. I am very concerned to see that the particular scheme we agreed to for monitoring emissions and making the results available to community members during the substation upgrade is replicated in the Draft PIP. National Grid and GZA officials should be clear that the substation upgrade was classified as separate from the remediation process, which is why the work could be completed without presenting it to the public. As we look ahead to the full remediation, the particular air monitoring strategies, and techniques for communicating information about the results of that monitoring to the community, will need to be determined in conversation with the community about the particular threats posed by particular actions.

*Response: We will revise the PIP to delete the reference to posting weekly air monitoring data. Air monitoring plans for full-scale remediation of the Tidewater Site have not been developed as the final remedy for the project has not been approved by the RIDEM. The public will have an opportunity to comment and engage in a conversation about the proposed air monitoring program during the RAWP comment process described above.*

**February 12, 2013 Letter**

1. Comment: Page 2 – The draft PIP states: “This plan is not intended to cover Site activities relative to day-to-day operations of the natural gas regulating facility and electrical substation or other uses of the property by National Grid.” Since community members and parents from nearby schools have already met with GZA, RIDEM, and National Grid regarding substation upgrades and earthwork, especially with regard to improving air monitoring plans in relation to this work, which falls outside the official remediation plan, I would ask that this sentence be clarified to ensure that residents can expect to be informed and be invited to actively participate in the shaping of any plans for the site that would require disturbance to soil or otherwise create a potential public health risk. Some of these activities could be interpreted, potentially, as “day-to-day operations”, and therefore this statement should be clarified to clearly differentiate between actual day-to-day operations and other operations that are not specifically included in the remediation but will disturb soil, create potential emissions, etc.

*Response: National Grid will revise the PIP to clarify this sentence as follows: “This plan is not intended to cover Site activities relative to the day-to-day operations, including repair and maintenance of the natural gas regulating facility and electrical substation involving minor soil disturbances (i.e., fence post installation) or other uses of the property by National Grid. Activities at these facilities involving excavations of soils with the potential to create volatile emissions are covered by this PIP. In the event of a facilities emergency requiring immediate soil excavation (utility repair, etc.), National Grid will follow the soil management procedures prepared for the previous natural gas station regulator and electrical substation work (i.e., April 2011 Materials Management Plan and November 2012 Soil Management Plan, respectively). In addition, air monitoring will be completed during these emergency events in accordance with the September 28, 2012, air monitoring summary memorandum submitted to RIDEM to the extent practical.”*

2. Comment: Page 17 – The Pawtucket Public Library will serve as a repository for all of the documents and other information related to the site. I suggest posting a sign or poster at the Library itself (not just on the fence at the Tidewater site) to let the general public know that this repository exists.

*Response: Information about public repositories for the Tidewater project is posted on the bulletin boards at the end of Tidewater Street and Bowles Court. National Grid will contact the Pawtucket Public Library to inquire about the possibility of posting a sign at the Library and will do so with the Library’s permission.*

3. Comment: Page 19 – If there are revisions proposed for the PIP in the future, National Grid will prepare a revised draft for review and approval by the public and RIDEM. National Grid should prepare a summary sheet to list all of the proposed changes/revisions, as well as the final approved revisions, not simply post the proposed revised draft of the full PIP online and in the physical repository (even if the changes/revisions are highlighted in the full document). This summary sheet should be a separate document to make it easy for the public to access, read, and digest the proposed, and then approved, changes.

*Response: While future revisions to the PIP will not re-open the draft and public comment period, we will prepare and make available summary sheets of proposed and approved changes/revisions for the public.*

4. Comment: In response to concerns raised by residents living on Thornton Street, immediately adjacent to the site, regarding natural gas odors and the possibility of air impacts from the groundwater contamination, I suggest addressing these issues at the poster session National Grid is hosting in the near future. In particular, addressing the issue of vapor intrusion into homes and schools should be a top priority. EJLRI receives technical assistance through an EPA program that

assists organizations and community residents in understanding technical information related to Brownfields contamination and remediation. Upon her review of the draft remedial plan submitted to RIDEM by National Grid, our consultant from the New Jersey Institute of Technology recommended the following:

#### VAPOR INTRUSION INVESTIGATION

Some of the chemicals (volatile compounds) identified at the site have the potential to travel through the soil as vapors. These vapors may then move up through the soil into nearby buildings, contaminating indoor air. Therefore, if a vapor intrusion investigation has not been completed, a vapor intrusion investigation is recommended to determine whether the occupants of neighboring buildings are at risk for exposure to VOCs due to vapor intrusion.

We will be submitting a final version of the consultant's review at the appropriate time (when public comments are being accepted on the SIR/recommended remedial alternative), but I wanted to share this recommendation because it speaks directly to concerns raised by residents at the last meeting.

*Response: We understand that nearby neighbors are concerned about vapor intrusion. Based on a number of factors – the way groundwater is distributed and moves at the Site, the way contaminants are distributed at the Site, and the distance from off-Site buildings to the nearest Site impacts- the potential for vapor intrusion into off-Site buildings, including the residences on Thornton Street or the neighboring schools, has not been identified as a potential pathway of concern for the Tidewater Site. We say this for several reasons:*

- *The majority of soil and groundwater impacts are located at least 50 feet away from the nearest Thornton Street residences and the schools.*
- *The portion of the Site that is nearest the residences along Thornton Street is an area where historical operations did not occur and significant impacts (VOCs or others) have not been detected in this area.*
- *In addition to the distance from Site impacts, the residences along Thornton Street and all three of the schools are located hydraulically upgradient of the Site – in other words, groundwater from the Site flows “downhill” towards the river, not towards the homes on Thornton Street or the schools. Therefore, the potential for migration of Site impacts towards Thornton Street and the schools is not a concern.*

*Our conclusion is also supported by:*

- *The March 2003 proposed revisions to the Connecticut Department of Environmental Protection (CTDEP) volatilization criteria, which references vapor intrusion guidance documents prepared by US Environmental Protection Agency (EPA).<sup>1</sup> This guidance indicates that volatilization criteria are applicable to impacts within 30 feet (both depth and lateral distance) from a structure.*
- *RIDEM's guidance document entitled “Evaluation of Vapor Intrusion Potential for Proposed RI School Sites,” dated September 2012.<sup>2</sup> This RIDEM guidance document outlines a step-by-step process for evaluating the potential for vapor intrusion to migrate*

---

<sup>1</sup> RIDEM has not yet developed any vapor intrusion criteria and therefore has incorporated the State of Connecticut's volatilization criteria, available here:

[http://www.ct.gov/deep/cwp/view.asp?a=2715&q=458652&deepNav\\_GID=1626](http://www.ct.gov/deep/cwp/view.asp?a=2715&q=458652&deepNav_GID=1626)

<sup>2</sup> RIDEM developed this guidance document in September 2012, available here:

<http://www.dem.ri.gov/programs/benviron/waste/pdf/skulvapr.pdf>

*from the subsurface into an existing or proposed building to be used as a school. Using this guidance document and the understanding of subsurface impacts and groundwater flow direction information, an evaluation for the potential for vapor intrusion into the off-Site schools and residences is not considered warranted.*

*Finally, National Grid's predecessor owners conducted a soil gas survey surrounding the Francis J. Varieur School in 1996. The survey consisted of 28 sampling points adjacent to the school to ascertain whether the potential existed for the migration of vapors from the surrounding soils into the school. No VOCs were detected in the samples, with the exception of two soil gas samples which detected low levels of trichloroethylene (TCE). TCE is not a contaminant associated with historic MGP and power plant operations and is not associated with the Tidewater Site. Subsequent indoor air samples were collected from within the school for TCE analysis. Those samples did not detect any TCE.*

*At this time, National Grid does not plan on having a specific poster board regarding vapor intrusion at the community outreach session. However, we will be willing to discuss the issue should anyone have any questions about vapors. In addition, we would be happy to discuss this issue further with representatives of the New Jersey Institute of Technology (NJIT) if you wish.*

*To address the question regarding natural gas odors in the neighborhood, National Grid will have a representative available from gas operations at the Community Outreach Session to discuss the natural gas odor concerns raised by the community.*

*Natural gas is typically "odorless" from the well head. Federal and State law mandates that gas must be detectable by a person with an average sense of smell. As a result, pipeline operators and in some cases distribution system operators inject a malodorous material called mercaptan, commonly referred to as "odorant". Federal law also mandates that odorant added to a pipeline must not be harmful to people, pipe or other devices. National Grid does have several Level 3 gas leaks (defined as a non-hazardous leak; periodic monitoring required) in the neighborhood. Level 3 leaks do not present a risk to public health or safety. National Grid is continuing to monitor the leaks and is adhering to the strict Federal and State standards.*

5. Comment: The draft PIP is strong overall, but lacks specifics on how to best engage parents at the local schools. Principals at the schools may not be the best, or only, individuals to notify regarding upcoming work, air monitoring results, public meeting notices, etc. In fact, they can be bottlenecks for getting information out to the wider school community. Suggestions raised at the meeting to engage the Pawtucket Schools Superintendent, the school committee, etc. are all very good, but also are not enough to get through to individual parents. Signs or posters with general information posted at the front offices of the schools adjacent to the site would be a good start (and/or at student pick-up locations), as well as providing copies of public notices to all parents via their child's backpacks, as suggested by the principal at Varieur Elementary, would also help ameliorate this problem. Not all notices need to be sent home via backpacks, but any public meeting announcements should be, as should an initial introductory letter or handout with an overview of the site history and current status, including who to contact for more information. National Grid should work with the principals at the three schools to send this introductory info sheet/letter home with all students as soon as possible.

*Response: We provide notifications to those on the mailing/email list, which includes the principals of the neighboring schools. If the principals need assistance in distributing these notifications, we would be happy to help. The best way to find out information currently is to sign-up to the Tidewater mailing/email list via the National Grid website. National Grid encourages all parents/community members to sign up so that they can receive information directly from National Grid. Any interested party is also welcome to contact National Grid's Project Manager, Michele Leone, directly at 781-907-3651.*

*With permission of the neighboring schools, National Grid will post a sign on how to obtain information regarding the Site at the front office of each school. National Grid has prepared an updated fact sheet which was distributed on March 4, 2013, through the mailing and email lists, as well as via door-to-door flyers to the neighboring community. This fact sheet included information about the former Tidewater facility, recent activities at the Site, public involvement activities and next steps for the Site. The fact sheet accompanied a notification letter regarding the date, time and place of the upcoming Community Outreach Session. National Grid distributed this notification package to the schools on March 6, 2013, to be sent home with the students via backpacks. National Grid will continue to work with the principals about sending mailing list items (flyers, fact sheets and public notifications) in multiple languages home with the students via backpacks.*

6. Comment: Lastly, I would like to ask National Grid, GZA, and RIDEM to respond to how phytoremediation might play into the overall remediation strategy for this site, and/or if this approach has been discussed at all in relation to the Tidewater Site.

*Response: We considered phytoremediation but concluded that it is not a feasible remedial alternative for the following reasons:*

- *The depth of the treatment zone is limited by the depth of the root material of the plants.*
- *The contaminants at the former Tidewater facility are located at depth greater than two feet below the ground which is too deep for phytoremediation.*
- *The nature of certain impacts at the Tidewater Site, including separate phase product (in other words, coal tar or oils), are not amenable to treatment via phytoremediation. Due to these limitations, phytoremediation is not deemed appropriate as a potential remedial alternative for the former Tidewater facility.*

**Updates to Responses to Comments from the January 29, 2013 Public Meeting**  
**Open Comments and Questions Received:**

9. Audience member requested that technical documents be translated into “everyone speak” language.

*National Grid will continue to make every effort to use brief and nontechnical terminology in communications with members of the public. In an effort to meet this request, National Grid has hired a communications consultant to assist in the preparation of documents.*

12. Audience member spoke about historical mercury spill and lasting impact on concern from neighborhood. Audience member enquired about money from court settlement and publicly available information regarding mercury spill. He requested that information about the mercury spill, as it pertains to the history of the Tidewater Site, be included on the website and presented during the poster board session.

*National Grid did not own the property when the mercury spill took place in 2004 and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid purchased the property from Southern Union but did not acquire Southern Union’s liability for the mercury issues on the property. The mercury contamination from the 2004 spill has been cleaned up and removed from the property. In addition, the buildings have been checked for mercury and no mercury is currently stored on the property. National Grid stated that the files associated with the mercury spill are public information and can be reviewed through RIDEM.*

The audience member further requested that information on the mercury spill be posted on the National Grid website.

*National Grid explained that it was not liable for the mercury release and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid indicated that it would consider the request and provide a formal response in the response to comments on the PIP.*

*The following additional response was prepared by RIDEM and provided to National Grid following the January 2013 public meeting. National Grid was not involved in preparation of this response or involvement in the Southern Union Case.*

*“In June 2012, the U.S. Supreme Court remanded an \$18-million sentence against the owners of New England Gas in a case that stemmed from the 2004 mercury spill at a Pawtucket housing project. The ruling puts at question the \$12 million in damages that were to have gone to Rhode Island environmental groups (the majority of which were to be managed by the Rhode Island Foundation, in order to fund grants in environmental education, remediation, conservation, and children's health). The remaining \$6 million was a fine. The Supreme Court case hinged on circumstances that require juries -- not judges -- to set penalties after criminal convictions, so the ruling does not change the 2008 conviction of Texas-based Southern Union Co. for illegal storage of the hazardous material that belonged to a former subsidiary. But the ruling means the Supreme Court remanded the case for further proceedings in US District Court (RI) consistent with this opinion. The June 2012 Supreme Court Decision can be found at <http://www.supremecourt.gov/opinions/11pdf/11-94a1b2.pdf> . The US District Court heard oral arguments in December 2012 in an attempt to determine how to properly proceed with the case from here. DEM has received no additional information on this matter from the Court since the hearing in December 2012. “ – Communications from RIDEM*

14. Audience member commented on gas smell at Thornton and Merry Streets and whether or not they are safe or being exposed to natural gas (or its additives).

*The odor that the audience member says he smelled is likely associated with mercaptan. Natural gas by itself is odorless. Mercaptan is an odorant that is added to natural gas so the gas can easily be detected. It is carried with the natural gas stream.*

*National Grid will contact its Natural Gas Division to find out more information about this concern. Representatives from National Grid will be available during the March 27, 2013 community outreach meeting to discuss public concerns regarding the natural gas operations at the Tidewater facility.*

*In addition, refer to the response above for Comment 4 of the February 12, 2013 comment letter regarding “natural gas odors.”*

15. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI) introduced herself and her agency to the audience. She indicated that EJLRI had access to funds from the US Environmental Protection Agency (USEPA) and could be used as a resource to the community. She also suggested that National Grid have a poster board regarding vapor intrusion during the Community Informational Session to educate the public.

*Refer to the response above for Comment 4 of the February 12, 2013 comment letter regarding “vapor intrusion investigation.”*

*RIDEM also added that the potential for volatilization of contaminants from the Site is not supported by the results of the recent air monitoring program (hand held field instruments) which is being followed as part of the electrical substation project.*

17. Audience member suggested that Cape Verdean be added as a language to the translation list. Also suggested that Oak Hill Nursing Home be added to the distribution list.

*National Grid understands that Cape Verdean is a dialect of Portuguese. Based on discussions with a translation service, we also understand that documents translated in Portuguese should be understood by people who speak Cape Verdean. Therefore, National Grid does not plan to provide documents in Cape Verdean. If a community member requires assistance or translation other than Spanish and Portuguese, please contact Michele Leone at National Grid.*

*National Grid has added Oak Hill Nursing Home to the door to door flyer distribution list during the March 4, 2013 mailing.*

### **March 6, 2013 Email**

(1) National Grid should develop separate communication materials for schools – and provide enough copies to give place one in each student’s backpack.

*National Grid will continue to work with the principals to get materials out to parents via backpacks. To avoid confusion in disseminating this information, National Grid will work directly with the principals and other stakeholders.*

(2) School principals want to review all of the fliers/documents that will be sent to parents before NG makes copies, translates, or finalizes the communication, to make sure they communicate effectively. Julie Nora (ICS) and Carolyn Sheehan (Blackstone Valley) made this suggestion.

*National Grid will work with the principals to ensure that they are comfortable with the documents we provide to them for distribution.*

(3) Neighbors also want to review materials before NG sends out communications to neighborhood – point person can be Amelia Rose at EJ League who can send out draft to list of neighbors and collate comments/suggestions within one week and send back to NG for finalization (worry is that the communications are too wordy and will not be read).

*National Grid is working with a communications consultant in order to make mailings more easily understood by the community in response to this concern. Given this, National Grid will not be providing drafts of our communications to the neighbors prior to distribution. We continue to appreciate the community’s input on the communications and welcome suggestions on how to further improve this process.*

(4) Hold regular meetings with a core group of residents and school personnel to give NG/GZA a chance to communicate in a smaller group setting – in addition to the larger public meetings that happen less frequently. This will help increase communication with the most committed/involved residents and school officials who will be ambassadors to other residents and the wider school community to generate their interest and involvement. Also will make larger public meetings less adversarial and more productive because it won’t be the first time people are hearing about a certain issue or proposal.

*National Grid designed the public involvement plan (PIP) to involve all community members and interested parties. National Grid believes that the large number of public meetings and the commitment to schedule additional meetings on an as-needed basis pre-empts the need for smaller, stakeholder meetings. Community members are strongly encouraged to contact Michele Leone at any time throughout the site cleanup process by calling 781-907-3651 or via email at [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com) should they have questions or comments.*

(5) Translation at larger public meetings should be made available regardless of whether someone contacts NG to say they are coming to a meeting – this would help build trust with the neighborhood and principals could guarantee to parents that interpretation would be available at public meetings no matter what.

*At all public meetings, translation assistance will be provided for non-English speaking individuals, upon request. Requests can be made to Michele Leone by calling 781-907-3651 or via email at michele.leone@nationalgrid.com.*

(7) NG should create bookmarks with all relevant contact information as well as instructions for how people can get on the email/phone notification lists. These will be helpful to hand out in the neighborhood and at the schools and would be more likely to be read and communicate effectively – rather than a long letter.

*National Grid has created magnets with the requested information which will be available at the upcoming community information session.*

A bulleted summary of the proposed revisions to the PIP, as discussed above, is attached to this letter.

Should you have any questions or comments regarding the information presented herein, please do not hesitate to contact the undersigned or Michele Leone at 781-907-3651.

Very truly yours,

Summary of Proposed Revisions to PIP

CC: Ms. Michele Leone, National Grid  
Ms. Elizabeth Stone, RIDEM

**FEBRUARY 21, 2013**

NOTIFICATION OF PUBLIC COMMENTS RECEIVED

February 21, 2013

Ms. Michele V. Leone  
Manager, New England Site Investigation & Remediation  
National Grid  
40 Sylvan Road  
Waltham, MA 02451-1120

RE: Tidewater Manufactured Gas Plant (former)  
Tidewater Street  
Pawtucket, Rhode Island

Dear Ms. Leone:

On November 9, 2011, the Rhode Island Department of Environmental Management (the Department) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases, (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in an efficient manner.

In the matter of the above referenced "Site" (as defined in the Industrial Property Remediation and Reuse Act), and in accordance with Rule 7.07.E (Public Involvement Plans) of the 2011 Remediation Regulations, the Department's Office of Waste Management (OWM) has received the following documents concerning public comments on the draft Public Involvement Plan (PIP):

1. Letter from Holly Dygert to the Department, Re: Tidewater Site Public Involvement Plan, dated January 27, 2013, and received via e-mail on January 28, 2013; and
2. Comments re: Draft Public Involvement Plan, Former Tidewater Facility and Former Power Plant, Tidewater and Merry Streets, Pawtucket, Rhode Island, prepared by the Environmental Justice League of Rhode Island (EJLRI), received via e-mail on February 12, 2013.

In addition, National Grid received several comments at the public meeting for the draft PIP held on January 29, 2013.

Please review these submitted comments along with those received at the public meeting and prepare written responses to each of them as appropriate. A completed document, incorporating responses all of the comments, must be submitted to the Department for review and approval.

**All correspondence regarding this Site should be sent to the attention of:**

Joseph T. Martella II – Senior Engineer

Mr. Joseph Martella II, Senior Engineer  
RIDEM Office of Waste Management  
Site Remediation Program

Re: Tidewater Site Public Involvement Plan

Dear Mr. Martella,

I am very pleased that RIDEM has implemented a public involvement mechanism to ensure that members of the community who may be exposed to hazards are involved in the remediation process. I reviewed National Grid's draft Public Involvement Plan (PIP) for the Tidewater Site, and I am also very pleased with many of the actions National Grid has proposed to take to ensure that those potentially impacted by the work at Tidewater are informed of the work. I am writing to communicate my suggestions for strengthening the proposed PIP. These suggestions are aimed, first, to optimize the ability of those who could be impacted by the site's hazards to access information about the nature of these hazards and about potential routes of exposure, and, second, to ensure that they are able to influence the process in accordance with their particular concerns.

I appreciate that National Grid solicited comments from the community through the interview process in June of 2012, and provided a synthesis of the suggestions in the *Draft PIP*. National Grid has already acted on many of these suggestions, and has integrated many of them into the proposed PIP. The community bulletin boards – with announcements and the results of weekly air monitoring – are very useful communication tools. I look forward to the incorporation of the color-coded alert system. The information in the boards should be provided in the three primary languages of the community, which are English, Spanish and Portuguese. I was concerned that National Grid seemed to reject a request made during the interviews for information to be translated into both Spanish and Portuguese. I want to underscore the importance of providing information in the community's languages.

I am very pleased that National Grid has proposed to create a color-coded map of Tidewater site hazards to the public as part of the PIP. Despite years of communications about the hazards on the site, the members of the stakeholder group are still unclear about concentrations of particular hazards, and where they are located. Thus, I am eager to see this map. I am also pleased that National Grid is proposing a Community Outreach (poster) Session, and possibly a tour of the site.

While I am generally satisfied with the strategies National Grid has proposed to convey information to the public, I have two main concerns. The first is that the *Draft PIP* largely neglects the public's role in shaping the remediation process. The second is that the particular

strategy for monitoring air quality that was agreed on for the electrical substation upgrade is included in the *Draft PIP* as the plan for the remediation.

In regards to the first concern, I agree with the characterization of a public involvement process laid out on page 1 of the *Draft PIP*, as “an agreement between the party conducting response actions and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the site.” This definition identifies the public as important partner in the remediation process. Since the public’s interests vis-à-vis the remediation process diverge in important ways from those of the property owner, the public must have the ability to shape the remediation, and the precautions that are taken during the remediation process. I am concerned, however, that the *Draft PIP* construes public participation narrowly, as informing the public about work plans that have already been developed.

For example, on page 8, in describing the process through which a final remediation plan for the site will be determined, the *Draft PIP* states that RIDEM will issue a Program Letter when it has concluded that “the site has been adequately assessed” in the Site Investigation Report. The *Draft PIP* continues that “Following receipt of the Program Letter, National Grid will notify [various parties]... that the investigation is complete and that **RIDEM has concurred with the recommended remedial alternative**... Subsequent to this public notification and following receipt of any public comments, the Department will issue a Remedial Decision Letter formally approving the SIR.” In this description, the identification and approval of a remedial strategy are depicted as occurring apart from public involvement. This negates the role of the public in the decision-making process. Moreover, I believe that it is a mischaracterization of the process through which remediation strategies are determined. It is my understanding that the Program Letter solely certifies that RIDEM has determined that the proposed remedy meets the criteria for an acceptable remedy. I understand that the final determination of a remedy cannot be made until members of the community are given an opportunity to consider the proposal, and to convey their concerns to RIDEM.

The characterization of the process through which a *Remedial Action Work Plan* (RAWP) is identified and selected in the *Draft PIP* similarly neglects the role of the public. Though the text states that “Many of the above remedial process steps will be accompanied by public meetings and comment periods” (p.8), I find it disconcerting that the public’s role in shaping the remediation process is not included in National Grid’s description of the decision-making process. This view of public involvement as a process whereby National Grid officials inform the public about the remediation process carries through to other sections of the *Draft PIP*. For example, in the section on Community Meetings, meetings are depicted as opportunities for National Grid representatives to inform community members about the work that has been and will be undertaken in the site. Though informing the community is crucial for facilitating their involvement in the process, it is not sufficient. The document also states that meetings will be held “in conjunction with... Departmental approval of the *Remedial Action Work Plan*; [and]

prior to remedy implementation” (p.14). This neglects the crucial role the public will have in shaping the RAWP.

The *PIP* should be revised to indicate clearly that potential work plans will be presented in community meetings, and that community concerns will be solicited to ensure that the final work plans reflect the concerns and needs of the public. Opportunities for community members to comment on the proposed plans and thereby shape the remediation process should be clearly laid out in the meeting agendas, and in the scheduling of meetings (in relation to RIDEM’s final decisions about work at the site).

In regards to my second concern, one of the requests most of the interviewees made was for National Grid to make data from air monitoring available in real time to the community. While meeting with representatives from National Grid and RIDEM during the early Fall of 2012, we learned that this was not possible with the particular hand held devices being used to monitor emissions during the current electrical substation upgrade. Moreover, RIDEM representatives at the meeting seemed to concur that the small-scale nature of the work and the limited extent of contaminants in the soil did not warrant the more costly kind of air monitoring technologies that enable real-time posting of readings. I am very concerned to see that the particular scheme we agreed to for monitoring emissions and making the results available to community members during the substation upgrade is replicated in the *Draft PIP*. National Grid and GZA officials should be clear that the substation upgrade was classified as separate from the remediation process, which is why the work could be completed without presenting it to the public. As we look ahead to the full remediation, the particular air monitoring strategies, and techniques for communicating information about the results of that monitoring to the community, will need to be determined in conversation with the community about the particular threats posed by particular actions.

In closing, I want to reiterate my support for the PIP process that RIDEM has adopted, and that National Grid has begun to develop. I look forward to continuing to work with RIDEM and National Grid to develop an effective plan for ensuring optimal public involvement.

Sincerely,

Holly Dygert

*Comments re: Draft Public Involvement Plan, Former Tidewater Facility and Former Power Plant, Tidewater and Merry Streets, Pawtucket, Rhode Island*

Dear Mr. Martella,

I am submitting the following comments on behalf of the Environmental Justice League of Rhode Island (EJLRI) regarding the draft Public Involvement Plan (PIP) prepared by GZA on behalf of their client, National Grid, the responsible party for the Tidewater Site.

I have listed a few specific comments first, followed by more general suggestions for the PIP overall.

Page 2 – The draft PIP states: “This plan is not intended to cover Site activities relative to day-to-day operations of the natural gas regulating facility and electrical substation or other uses of the property by National Grid.” Since community members and parents from nearby schools have already met with GZA, RIDEM, and National Grid regarding substation upgrades and earthwork, especially with regard to improving air monitoring plans in relation to this work, which falls outside the official remediation plan, I would ask that this sentence be clarified to ensure that residents can expect to be informed and be invited to actively participate in the shaping of any plans for the site that would require disturbance to soil or otherwise create a potential public health risk. Some of these activities could be interpreted, potentially, as “day-to-day operations”, and therefore this statement should be clarified to clearly differentiate between actual day-to-day operations and other operations that are not specifically included in the remediation but will disturb soil, create potential emissions, etc.

Page 17 – The Pawtucket Public Library will serve as a repository for all of the documents and other information related to the site. I suggest posting a sign or poster at the Library itself (not just on the fence at the Tidewater site) to let the general public know that this repository exists.

Page 19 – If there are revisions proposed for the PIP in the future, National Grid will prepare a revised draft for review and approval by the public and RIDEM. National Grid should prepare a summary sheet to list all of the proposed changes/revisions, as well as the final approved revisions, not simply post the proposed revised draft of the full PIP online and in the physical repository (even if the changes/revisions are highlighted in the full document). This summary sheet should be a separate document to make it easy for the public to access, read, and digest the proposed, and then approved, changes.

In response to concerns raised by residents living on Thornton Street, immediately adjacent to the site, regarding natural gas odors and the possibility of air impacts from the groundwater contamination, I suggest addressing these issues at the poster session National Grid is hosting in the near future. In particular, addressing the issue of vapor intrusion into homes and schools should be a top priority. EJLRI receives technical assistance through an EPA program that assists organizations and community residents in understanding technical information related to Brownfields contamination and remediation. Upon her review of the draft remedial plan submitted to RIDEM by National Grid, our consultant from the New Jersey Institute of Technology recommended the following:

#### VAPOR INTRUSION INVESTIGATION

Some of the chemicals (volatile compounds) identified at the site have the potential to travel through the soil as vapors. These vapors may then move up through the soil into nearby buildings, contaminating indoor air. Therefore, if a vapor intrusion investigation has not been completed, a vapor intrusion investigation is recommended to determine whether the occupants of neighboring buildings are at risk for exposure to VOCs due to vapor intrusion.

We will be submitting a final version of the consultant's review at the appropriate time (when public comments are being accepted on the SIR/recommended remedial alternative), but I wanted to share this recommendation because it speaks directly to concerns raised by residents at the last meeting.

The draft PIP is strong overall, but lacks specifics on how to best engage parents at the local schools. Principals at the schools may not be the best, or only, individuals to notify regarding upcoming work, air monitoring results, public meeting notices, etc. In fact, they can be bottlenecks for getting information out to the wider school community. Suggestions raised at the meeting to engage the Pawtucket Schools Superintendent, the school committee, etc. are all very good, but also are not enough to get through to individual parents. Signs or posters with general information posted at the front offices of the schools adjacent to the site would be a good start (and/or at student pick-up locations), as well as providing copies of public notices to all parents via their child's backpacks, as suggested by the principal at Varieur Elementary, would also help ameliorate this problem. Not all notices need to be sent home via backpacks, but any public meeting announcements should be, as should an initial introductory letter or handout with an overview of the site history and current status, including who to contact for more information. National Grid should work with the principals at the three schools to send this introductory info sheet/letter home with all students as soon as possible.

Lastly, I would like to ask National Grid, GZA, and RIDEM to respond to how phytoremediation might play into the overall remediation strategy for this site, and/or if this approach has been discussed at all in relation to the Tidewater Site.

Sincerely,

A handwritten signature in cursive script that reads "Amelia Rose". The signature is written in dark ink and is positioned below the word "Sincerely,".

Amelia Rose, Director

Re: *Meeting Summary - January 29, 2013*  
Draft Public Involvement Plan  
Former Tidewater MGP and Power Plant Site  
Pawtucket, Rhode Island  
*RIDEM Case No. 95-022*

Dear Mr. Martella:

On behalf of our client, The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental Inc. (GZA) is pleased to provide the attached summary of the January 29, 2013 public meeting associated with the Former Tidewater Manufactured Gas Plant (MGP) and Power Plant Site located in Pawtucket, Rhode Island (the Site). The purpose of the public meeting was to discuss public comments to the draft Public Involvement Plan (PIP) which was submitted to the Department on November 26, 2012.

Should you have any questions or comments regarding the information presented herein, please do not hesitate to contact the undersigned or Michele Leone at 781-907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

Ms. Elizabeth Stone, RIDEM

Summary of Meeting  
 DRAFT Public Involvement Plan (PIP)  
 Former Tidewater Facility  
 Pawtucket, Rhode Island

January 29, 2013 6 PM  
 Francis J. Varieur Elementary School  
 486 Pleasant Street  
 Pawtucket, Rhode Island

- **Introduction to Meeting – Michele Leone (National Grid Representative)**
- **Presentation of DRAFT PIP dated November 26, 2012 – Elizabeth Stone (Rhode Island Department of Environmental Management or RIDEM) and Meg Kilpatrick, P.E. (GZA GeoEnvironmental, Inc.)**

The presentation included a summary of the Draft Public Involvement Plan (PIP) for the former Tidewater Facility (the Site). The draft PIP was developed based on input from the public provided during the community interviews completed in June 2012, as well as input from RIDEM. It provides a blueprint for keeping the public informed during the site cleanup process. It also presents how the public can participate in the process and comment on the project. A PIP is a living document and can be amended to reflect additional issues or challenges that may arise during the cleanup process.

National Grid submitted a draft PIP to RIDEM on November 26, 2012. The draft PIP has four components: 1) public notice, 2) fact sheets and enhanced communications, 3) community meetings and 4) information repositories. The four components are presented in the below table.

<p><b><u>Public Notice:</u></b></p> <ul style="list-style-type: none"> <li>• Mailing List (used to announce public meetings, distribute fact sheets, information about availability of reports, etc.)</li> <li>• Email List (optional)</li> <li>• Sign up at <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>• Or, send request to National Grid</li> </ul>	<p><b><u>Fact Sheets and Enhanced Communications:</u></b></p> <ul style="list-style-type: none"> <li>• Fact Sheets (used to inform of development of new information and/or achievement of significant milestones)</li> <li>• Informational Bulletin Boards (end of Tidewater Street and Bowles Court)</li> <li>• Phone Message Alert System during excavation</li> </ul>
<p><b><u>Community Meetings:</u></b></p> <ul style="list-style-type: none"> <li>• Encourages equal participation by all to create an atmosphere of constructive, open dialogue</li> <li>• Proposed Schedule and Objective of Public Meetings</li> <li>• Evening meeting time</li> <li>• Francis J. Varieur School (preferred venue)</li> </ul>	<p><b><u>Information Repositories:</u></b></p> <ul style="list-style-type: none"> <li>• Publicly Accessible Site File: RIDEM Case No. 95-022 <a href="http://www.dem.ri.gov/topics/fileview/htm">www.dem.ri.gov/topics/fileview/htm</a></li> <li>• Publicly Accessible Websites: <a href="http://www.tidewatersite.com">www.tidewatersite.com</a> <a href="http://www.dem.ri.gov/benviron/waste/tide/htm">www.dem.ri.gov/benviron/waste/tide/htm</a></li> <li>• Local Information Repository: Pawtucket Library (13 Summer St) Bulletin Boards: Tidewater St &amp; Bowles Ct</li> </ul>

Following the public comment period for the draft PIP, National Grid will provide a response to comments and revise the PIP as necessary for submittal to RIDEM for final review and approval.

Summary of Meeting  
 DRAFT Public Involvement Plan (PIP)  
 Former Tidewater Facility  
 Pawtucket, Rhode Island

January 29, 2013 6 PM  
 Francis J. Varieur Elementary School  
 486 Pleasant Street  
 Pawtucket, Rhode Island

National Grid will hold a community outreach session in March 2013 to present information about the Site in an informal poster-board type setting. Following this session, National Grid will hold the initial community meeting within 60 days after receipt of the Program Letter from RIDEM (issued following RIDEM’s formal review of the Site Investigation Report submitted by National Grid). The schedule of community meetings follows, and National Grid encourages participation by all to create an atmosphere of constructive, open dialogue.

ACTIVITY	TIME PERIOD
Community Outreach Session	Within 60 days of Draft PIP Meeting (March 2013)
Initial Community Meeting	Within 60 days of receipt of Program Letter – during SIR Public Comment Period
Public Meeting on DRAFT Remedial Action Approval Plan (RAWP)	Within 12 months of receipt of Remedial Decision Letter
Submit RAWP for RIDEM Approval	Within 6 months of DRAFT RAWP Meeting
Public Meeting prior to initiation of remedy	Minimum of 30 days prior to start of remediation
Public Meetings during remediation	Meeting schedule to be presented for discussion purposes once remedial schedule is developed and approved by RIDEM
Public Meeting upon completion of the remedy	Within 30 days following completion of remediation

A copy of the presentation associated with the January 29, 2013 Draft PIP meeting is posted on the National Grid Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)).

**Questions and Comments Session:** *(Responses provided in italics)*

---

National Grid provided a brief summary of written public comments received to date on the DRAFT PIP.

- Public requested that Portuguese (in addition to Spanish) be included as languages for documents requiring translation.

*National Grid stated that going forward, the following document types will be provided in English, Spanish and Portuguese: 1) Notification Mailings, 2) Fact Sheets and 3) brief Executive Summaries which will accompany future reports.*

- Public requested that color-coded alert system be implemented on the bulletin boards.

*National Grid stated that the color-coded alert system has been implemented on the bulletin boards during the recent excavation project. The system involves posting different color sheets to indicate when excavation is active (yellow sheet) and not active (blue sheet).*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

- Public requested color-coded map of Tidewater Site contaminants.

*National Grid stated that the color-coded map for the Tidewater project is being finalized and will be presented at the upcoming Community Information Session. The final map will also be posted on the National Grid website and the bulletin boards.*

- Public expressed concern that current Draft PIP does not take into account the public's role in providing input into the remediation process.

*National Grid reinforced that the process going forward and as outlined in the PIP is intended to provide a means of effective "two-way communications" between the public and National Grid. National Grid stated that the Initial Community Meeting (which will follow RIDEM's review of the Site Investigation Report) will provide the public an opportunity to provide comment on the conceptual remedial strategy for the Tidewater Site. In addition, National Grid indicated that the current draft of the PIP has been modified to include a public meeting on the draft Remedial Action Work Plan (RAWP – the document that will be submitted to RIDEM to present the details of how the remedy will be implemented) to further provide an opportunity for the public to comment on the Site cleanup process.*

- Public expressed concern that current Draft PIP does not consider air monitoring during the remediation of the Tidewater Site.

*National Grid stated that the air monitoring plans for full-scale remediation of the Tidewater Site have not been developed as the final remedy for the project has not been approved. National Grid stated that the public will have an opportunity to comment and present their concerns during future public meetings, which National Grid will incorporate into the air monitoring plan for the final remediation.*

Audience member relayed concern that draft PIP references weekly posting of air monitoring data and that inclusion of this language will set a precedent for future air quality monitoring.

*National Grid stated that the PIP will be modified to delete reference to the posting of weekly air monitoring data.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

**Open Comments and Questions Received:**

1. Audience member enquired about date for the Community Outreach Session.

*The current schedule is to have the Community Outreach Session in mid to late March 2013.*

2. Audience member enquired about what March 2013 Community Outreach Session consist of.

*The Community Outreach Session will consist of an informal meeting where information will be presented on poster boards to the public. The poster boards will include a variety of topics, including such things as "What is an Manufactured Gas Plant?" history of the Tidewater Site, findings of the investigations, demonstrations of field equipment, description of current National Grid operations at the property, etc. Each poster board will be manned by a representative from National Grid and/or GZA to answer questions. RIDEM will also be present to answer questions from the public.*

3. Audience member expressed concern about when to know when things are going on at the Site; specifically, when to leave kids inside.

*Information regarding excavation at the Site is provided through the mailing/email list, posted to the bulletin boards and posted to the Tidewater websites. The National Grid website will also be updated to include the color-coded alert system information (active and no active excavation). National Grid will also inform school principals of the schedule of work.*

4. Audience member stated that he is a parent and emphasized that it is important to remember that parents have no way to obtain information about the Site.

*National Grid provides notifications to those on the mailing/email list, which includes the principals of the neighboring schools. Due to privacy issues, National Grid does not have access to student/parent information. National Grid will continue to work with the school principals in developing an effective way to communicate with the parents. The best way to find out information currently is to sign-up to the Tidewater mailing/email list via the National Grid website. National Grid requested that audience members tell other parents/community members about this and encourage them to sign up so that they can receive information directly from National Grid.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

- Audience member stated that parents from the International Charter School want a way for the information to be communicated to the parents.

*National Grid will continue to work with the school principals in developing an effective way to communicate with the parents. National Grid encouraged parents to sign-up for the mailing and/or email lists, as well as visit the National Grid website, to obtain information.*

- Audience member stated that he/she feels that the parents have no way to determine what is going on at the site and suggested possibly implementation of additional bulletin boards.

*The bulletin boards were installed at locations proximate to the Tidewater site, as well as accessible and visible to the schools. The two site bulletin boards are located close to each of the neighboring schools. National Grid will look into the possible installation of additional bulletin boards, as well as continuing to work with the school principals in developing an effective way to communicate with the parents.*

- The principal from Blackstone Academy stated the community has various levels of technical understanding and that disseminating information about the Tidewater Site is difficult.

*In the future, National Grid will prepare simple executive summaries for major report submittals. In preparing these summaries, National Grid will make every effort to use brief and nontechnical terminology in communications to the public. In the near future, National Grid will prepare an executive summary for the recent Site Investigation Report as well as an updated Fact Sheet which will be distributed through the mailing lists, as well as placed into the information repositories. National Grid will also continue to work with the school principals in developing an effective way to communicate information to the parents.*

- Audience member stated that, as a parent, the 2- hour notice provided through the phone message alert system was not enough. In addition, notification regarding the Tidewater site needs to be provided to more parties, such as elected officials and School Committee(s). A presentation of information would be warranted.

*The mailing list established for the Tidewater project does include local elected officials as well as school representatives, including the Principals of the Blackstone Academy, International Charter School and Francis J. Varieur School, as well as the Superintendent of schools for the City of Pawtucket. National Grid would be happy to include members of the School Committee on the mailing list, upon receipt of their contact information. National Grid also is willing to meet with*

Summary of Meeting

Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*members of the school and local government to present information about the Tidewater site and answer any questions that they may have.*

9. Audience member requested that technical documents be translated into “everyone speak” language.

*National Grid is attempting to do this and will continue to try to produce documents that are better understood by the public.*

10. Audience member asked when RIDEM will be ready to review the Site Investigation Report (SIR).

*Joseph Martella of RIDEM provided details regarding the regulatory process under the RIDEM Remediation Regulations. He indicated that the Public Involvement Plan must be finalized and in place before RIDEM’s review of the SIR can begin.*

Audience member enquired about the timing of this review and if the spring would seem reasonable.

*RIDEM indicated that it may be possible but reiterated that PIP must be finalized before the review of the SIR begins.*

11. Audience member requested that live translators be provided at public meetings.

*National Grid would be happy to provide translators, if requested by the public in advance of the meetings. Future notifications will include language regarding the availability of translators upon request by the public.*

12. Audience member spoke about historical mercury spill and lasting impact on concern from neighborhood. Audience member enquired about money from court settlement and publicly available information regarding mercury spill. He requested that information about the mercury spill, as it pertains to the history of the Tidewater Site, be included on the website and presented during the poster board session.

*National Grid did not own the property when the mercury spill took place in 2004 and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid purchased the property from*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*Southern Union but did not acquire Southern Union's liability for the mercury issues on the property. The mercury contamination from the 2004 spill has been cleaned up and removed from the property. In addition, the buildings have been checked for mercury and no mercury is currently stored on-site. National Grid stated that the files associated with the mercury spill are public information and can be reviewed through RIDEM.*

The audience member further requested that information on the mercury spill be posted on the National Grid website.

*National Grid explained that it was not liable for the mercury release was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid indicated that it would consider the request and provide a formal response in the response to comments on the PIP.*

13. Audience member concerned about Tidewater flyer that he received on his door from Environmental Justice League. The flyer depicted biohazard marker and list of chemicals with associated acute health hazards. Audience member relayed information about members of his household and neighbors being diagnosed with cancer and is concerned about what he is being exposed to at his home as he lives on Thornton Street located right next to site. He stressed that he wants to know if he is safe.

*National Grid stressed that the Site is fenced and locked to keep people off of the property. Under normal site conditions, the Site is safe to the community- in other words, there is no potential for airborne contaminants. During times of excavation, when soil is dug up and moved around, there is a potential for airborne contaminants. During soil excavation, National Grid follows an air quality monitoring program which has received public input and has been reviewed and approved by RIDEM. The results of this monitoring are posted to the bulletin boards as well as the Tidewater websites. This program was followed during the recent electrical substation upgrade project. The majority of excavation associated with this project is complete, with the exception of minor fence post installations and minor excavations associated with properly decommissioning equipment. Air data from this project did not show sustained exceedances of the thresholds (defined as being held over a 5-minute time period) at any time. A few transient exceedances of the thresholds were noted during the work which were not associated with the excavation activities (i.e., transient exceedances due to weather interference (rain), movement of trash material, orange peel, etc.) .*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

Audience member asked whether there are emissions coming from the site without moving the soil? Also, audience member wanted to know about indoor air monitoring and whether or not they should be concerned about migration/volatilization into buildings on Thornton Street.

*Contaminants from the site are not getting into the air (i.e., volatilizing) from the soil and groundwater under normal conditions (i.e., no soil being moved or disturbed). The majority of surface soils at Site are indicative of urban fill – soils which would typically be found in urban or city environments and exhibit low levels of contaminants. The majority of impacts are found below the ground surface (deeper than 2 feet) in the soils, at or below the groundwater table. In addition, the majority of soil, groundwater and separate phase product (oil) impacts are found where the historical Manufactured Gas Plant and Power Plant operations took place, primarily along the river area between Winter Street and the land behind the Max Read Field. The area where the residences are located along Thornton Street are in an area where historical operations did not occur and do not have elevated levels of observed impacts. This area is also located upgradient of the site – groundwater from the Site flows “downhill” towards the river, not towards the homes on Thornton Street. Based on this information, National Grid believes that the buildings on Thornton Street are unaffected by the migration and/or volatilization from impacts on the Tidewater Site.*

*The drawbacks to indoor air testing were also discussed, as this type of testing typically will pick up standard house hold products and chemicals, such as paint, cleaners, etc., which cannot be differentiated from possible site contaminants.*

*The findings of the drilling program in Max Read Field were also discussed. Results of the explorations indicated the presence of visually impacted soil at depths greater than 2 feet in a limited area on the eastern portion of the field. The soils at depth are not accessible (i.e., they are covered with 2 feet of visually non-impacted soil which would need to be removed). The exploration program was conducted with knowledge by the City of Pawtucket and the City is aware of the findings of the investigation.*

14. Audience member commented on gas smell at Thornton and Merry Streets and whether or not they are safe or being exposed to natural gas (or its additives).

*The odor that the audience member says he smelled is likely associated with mercaptan. Natural gas by itself is odorless. Mercaptan is an odorant that is added to natural gas so the gas can easily be detected. It is carried with the natural gas stream.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*National Grid will contact their Natural Gas Division to find out more information about this concern.*

15. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI) introduced herself and her agency to the audience. She indicated that EJLRI had access to funds from the US Environmental Protection Agency (USEPA) and could be used as a resource to the community. She also suggested that National Grid have a poster board regarding vapor intrusion during the Community Informational Session to educate the public.

*National Grid will consider adding a poster board regarding vapor intrusion to the Community Informational Session.*

*RIDEM also added that the potential for volatilization of contaminants from the site is not supported by the results of the recent air monitoring program (hand held field instruments) which is being followed as part of the electrical substation project.*

16. Audience member commented on concern regarding interfacing with the schools and the community. They suggested providing information about the site at a 4-6<sup>th</sup> grade comprehension level. Also, they requested that National Grid inform Shea High School about the impacts on the Max Read Field as they use the athletic field for sport activities.

*National Grid will look into this request and get back to the public. In the future, National Grid will prepare simple executive summaries for major report submittals. In preparing these summaries, National Grid will make every effort to use brief and nontechnical terminology in communications to the public. In the near future, National Grid will prepare an executive summary for the recent Site Investigation Report as well as an updated Fact Sheet which will be distributed through the mailing lists, as well as placed into the information repositories. National Grid will also continue to work with the school principals in developing an effective way to communicate information to the parents. Also, National Grid will consider adding Shea High School to the mailing list.*

17. Audience member suggested that Cape Verdean be added as a language to the translation list. Also suggested that Oak Hill Nursing Home be added to the distribution list.

*National Grid will consider adding Cape Verdean to the translation list. National Grid will also consider adding Oak Hill Nursing Home to the mailing list.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

18. Audience member enquired why this is the first Public Involvement Plan in RI and what is typically done in Massachusetts?

*RIDEM indicated that the Remediation Regulations were recently modified in November 2011 to include a formal Public Involvement process, similar to that established in Massachusetts. This is the first PIP in Rhode Island due to the recent change in the regulations. Massachusetts has had a PIP process in place for at least 20 years.*

19. Audience member inquired if the site is “safe,” why all the concern?

*RIDEM indicated that the Site is under the State’s guidance for a reason – there are soil and groundwater impacts at the site which do pose a certain level of exposure risk. RIDEM stressed that the fencing is also there for a reason – to prevent people from entering the Site. RIDEM also gave the example of different levels of exposure at the Site – i.e., on-site workers who are excavating soils (potential high exposure risk) versus people off-site at or near the fence line (low potential exposure risk).*

20. Audience member enquired if wildlife could present an exposure risk via soil disturbance (i.e., burrowing, digging) on site.

*GZA performs weekly site walks to inspect and document the conditions at the Site. There has not been evidence of significant soil disturbance by wildlife at the Site. In the future, we will continue to monitor soil disturbance.*

21. Audience member requested status on South Washout Area repair.

*The earthwork associated with the South Washout Area has not been completed. National Grid will continue to work with the City to have this work completed.*

22. Audience member enquired when the public will receive a response to comments.

*The schedule presented in the presentation was revisited. A summary of today’s meeting will be provided within 10 business days (by 2/12/2013). Written comments on the draft PIP from the public should be provided to RIDEM within 10 business days (by 2/12/2013). RIDEM indicated that an extension to the public comment period may be requested in writing. Timing for response to written comments will be based on how many comments are received.*

**From:** Dygert, Holly <hdygert@ric.edu>  
**Sent:** Wednesday, March 06, 2013 3:39 PM  
**To:** Leone, Michele (Michele.Leone@nationalgrid.com); Margaret Kilpatrick  
**Cc:** joseph.martella@dem.ri.gov; Amelia Rose (amelia.rose@ejlri.org); jenrossi3@gmail.com  
**Subject:** Tidewater Site communications, follow-up suggestions  
**Attachments:** PIP Recommendations Tidewater Community Group.doc

Dear Michele and Meg,

We held a meeting last week with members of the Tidewater community (school officials, parents of school children, and members of the neighborhood) to follow-up on National Grid's recent public meeting. One of the primary concerns expressed was that the language used in the outreach efforts was not accessible to most people. I personally spoke with a woman in the neighborhood who said that she keeps going to these meetings, but she doesn't understand anything that is said. I also noted that one of the attendees prefaced his comments at the meeting with, "I know I sound ignorant, but..." The school administrators, parents and residents had several suggestions of ways to make the communications more effective. We've compiled those suggestions – I am attaching the list and pasting it below.

As a college professor, I am constantly charged with translating expert knowledge into language that is accessible, often to kids coming right out of high school. I'm happy to compile a list of terms that are hard for non-specialists to understand (e.g., remedy, remediation, cap, program letter, abutter, action limits...). The list of definitions that National Grid provided in a former communication is a step in the right direction, but it would be better to replace those specialized terms with more accessible alternatives.

On a different note, can you tell me if you've been able to figure out what the source of the gas smell is that the resident at the public meeting complained about? I've heard multiple people complain about intermittent gas smells over the last couple of years.

Sincerely,

Holly Dygert

### **PIP Recommendations for the Tidewater Site March 6, 2013**

#### **Issues of concern that people would like to be addressed at the poster session:**

Gas Smells – What is this? What are potential impacts?

Differences among remedial alternatives – what options does National Grid have and why are they choosing one option over another?

What are potential future uses of this land/site after remediation? Will National Grid still own the site? Have there been discussions with City of Pawtucket?

What are the implications for neighbors' health based on what kinds of contaminants are at the site?

#### **Further Suggestions for Effectively Communicating with the Public (in preparation for the poster session):**

National Grid should develop separate communication materials for schools – and provide enough copies to give place one in each student's backpack.

School principals want to review all of the fliers/documents that will be sent to parents before NG makes copies, translates, or finalizes the communication, to make sure they communicate effectively. Julie Nora (ICS) and Carolyn Sheehan (Blackstone Valley) made this suggestion.

Neighbors also want to review materials before NG sends out communications to neighborhood – point person can be Amelia Rose at EJ League who can send out draft to list of neighbors and collate comments/suggestions within one week and send back to NG for finalization (worry is that the communications are too wordy and will not be read).

Hold regular meetings with a core group of residents and school personnel to give NG/GZA a chance to communicate in a smaller group setting – in addition to the larger public meetings that happen less frequently. This will help increase communication with the most committed/involved residents and school officials who will be ambassadors to other residents and the wider school community to generate their interest and involvement. Also will make larger public meetings less adversarial and more productive because it won't be the first time people are hearing about a certain issue or proposal.

Translation at larger public meetings should be made available regardless of whether someone contacts NG to say they are coming to a meeting – this would help build trust with the neighborhood and principals could guarantee to parents that interpretation would be available at public meetings no matter what.

Community members recommend that they be permitted to have their own poster/table at the poster session in addition to what NG/GZA are preparing.

NG should create bookmarks with all relevant contact information as well as instructions for how people can get on the email/phone notification lists. These will be helpful to hand out in the neighborhood and at the schools and would be more likely to be read and communicate effectively – rather than a long letter.

**SUMMARY OF PROPOSED CHANGES TO PIP**

## **Summary of Proposed Changes to the Public Involvement Plan (PIP)**

Based on Public Comments Received

Former Tidewater Facility

Pawtucket, Rhode Island

---

- Revise to state that National Grid will provide the following in English, Spanish and Portuguese:
  - Notification Mailings
  - Fact Sheets
  - Brief Executive Summaries which will accompany future reports.
- Revise the PIP to change the time period for the public meeting related to the Remedial Action Work Plan (RAWP). As revised, the public meeting regarding the RAWP will be held on the draft version of the RAWP prior to submittal to RIDEM.
- Revise the PIP to delete the reference of posting of weekly air monitoring data.
- Clarify definition of day-to-day uses of the Site that do not fall under the jurisdiction of the PIP. Revise the sentence in the PIP to state “This plan is not intended to cover Site activities relative to the day-to-day operations, including repair and maintenance of the natural gas regulating facility and electrical substation involving minor soil disturbances (i.e., fence post installation) or other uses of the property by National Grid. Activities at these facilities involving excavations of soils with the potential to create volatile emissions are covered by this PIP. In the event of a facilities emergency requiring immediate soil excavation (utility repair, etc.), National Grid will follow the soil management procedures prepared for the previous natural gas station regulator and electrical substation work (i.e., April 2011 Materials Management Plan and November 2012 Soils Management Plan, respectively). In addition, air monitoring will be completed during these emergency events in accordance with the September 28, 2012 air monitoring summary memorandum submitted to RIDEM to the extent practical.”
- Add a summary sheet of proposed revisions and with final approved revisions as an appendix to the PIP.
- Update PIP regarding how National Grid will work with the three neighboring schools to send information (i.e., fact sheets, public notifications, flyers) home to the students.

- Revise to state that National Grid will provide the following in English, Spanish and Portuguese:
  - Notification Mailings
  - Fact Sheets
  - Brief Executive Summaries which will accompany future reports.
- Revise the PIP to change the time period for the public meeting related to the Remedial Action Work Plan (RAWP). As revised, the public meeting regarding the RAWP will be held on the draft version of the RAWP prior to submittal to RIDEM.
- Revise the PIP to delete the reference of posting of weekly air monitoring data.
- Clarify definition of day-to-day uses of the Site that do not fall under the jurisdiction of the PIP. Revise the sentence in the PIP to state “This plan is not intended to cover Site activities relative to the day-to-day operations, including repair and maintenance of the natural gas regulating facility and electrical substation involving minor soil disturbances (i.e., fence post installation) or other uses of the property by National Grid. Activities at these facilities involving excavations of soils with the potential to create volatile emissions are covered by this PIP. In the event of a facility emergency requiring immediate soil excavation (utility repair, etc.), National Grid will follow the soil management procedures prepared for the previous natural gas station regulator and electrical substation work (i.e., April 2011 *Materials Management Plan* and November 2012 *Soil Management Plan*, respectively). In addition, air monitoring will be completed during these emergency events in accordance with the September 28, 2012 air monitoring summary memorandum submitted to RIDEM to the extent practical.”
- Add a summary sheet of proposed revisions and with final approved revisions as an exhibit to the PIP.
- Update PIP regarding how National Grid will work with the three neighboring schools to send information (i.e., fact sheets, public notifications, flyers) home to the students.
- Update the November 2012 Draft PIP with more recent public involvement and site investigation activities.

**EXHIBIT VI**

AUGUST 1, 2013 NOTIFICATION FROM RIDEM TO NATIONAL GRID

August 1, 2013

Ms. Michele V. Leone  
Manager, New England Site Investigation & Remediation  
National Grid  
40 Sylvan Road  
Waltham, MA 02451-1120

RE: Tidewater Manufactured Gas Plant (former)  
Tidewater Street  
Pawtucket, Rhode Island

Dear Ms. Leone:

On November 9, 2011, the Rhode Island Department of Environmental Management (the Department) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases, (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in an efficient manner.

In the matter of the above referenced "Site" (as defined in the Industrial Property Remediation and Reuse Act), and in accordance with Rule 7.07.E (Public Involvement Plans) of the 2011 Remediation Regulations, the Department's Office of Waste Management (OWM) has received the following document concerning National Grid's response to public comments on the draft Public Involvement Plan (PIP):

- Response to Public Comments, Draft Public Involvement Plan, Former Tidewater MGP and Power Plant Site, Pawtucket, Rhode Island, RIDEM Case No. 95-022, prepared by GZA GeoEnvironmental, Inc. (GZA), and dated March 22, 2013.

The OWM has reviewed the above referenced Response to Public Comments, and concurs with the proposed changes to the PIP, as listed in that document's attachment titled "Summary of Proposed Changes to the Public Involvement Plan (PIP)." Please prepare a final version of the PIP based upon the proposed changes.

The Department acknowledges that sufficient time has passed since the submittal of the Response to Public Comments, such that some of the information provided in the responses may require updating based upon decisions and activities that have taken place since March 22, 2013. For example, National Grid's decision to perform a soil gas investigation at the site, in response to public concerns raised about potential vapor intrusion. Therefore, the Department requests that

the March 22, 2013, responses be reviewed, and where deemed necessary, that changes or corrections be made, and/or updated information be added as appropriate. This letter and the revised updated responses to public comments should be added to the Final PIP as individual exhibits. Once these items are addressed, please submit the revised Final PIP with all exhibits to the Department in both hard copy for the public file and electronic PDF format suitable for posting on the Department's Tidewater web page.

If you have any questions regarding this letter, please contact me by telephone at (401) 222-2797 extension 7109 or by e-mail at [joseph.martella@dem.ri.gov](mailto:joseph.martella@dem.ri.gov).

Sincerely,

Joseph T. Martella II

Re: Revised Response to Public Comments  
Public Involvement Plan  
Former Tidewater MGP and Power Plant Site  
Pawtucket, Rhode Island  
*RIDEM Case No. 95-022*

Dear Mr. Martella:

On behalf of our client, The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) has prepared this updated letter in response to written public comments to the November 26, 2012 draft Public Involvement Plan (PIP) prepared for the Former Tidewater Manufactured Gas Plant (MGP) and Power Plant Site located in Pawtucket, Rhode Island (the Site). This letter supersedes our letter dated March 22, 2013 "Response to Public Comments" and serves to address the following comments provided to National Grid:

- Notification Letter from the Rhode Island Department of Environmental Management (RIDEM) Office of Waste Management (OWM) dated February 21, 2013 which enclosed written public comments to the draft PIP:
  - A letter dated January 28, 2013, from Ms. Holly Dygert
  - A letter dated February 12, 2013 from Ms. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI);
- A letter dated February 15, 2013, from GZA, summarizing responses to comments that were received from the audience during the meeting held on January 29, 2013;
- An email dated March 6, 2013, from Ms. Holly Dygert;
- A Response to Comments letter dated March 22, 2013, from GZA, summarizing the responses to public comments received since N
- November 26, 2012; and
- Notification Letter from the RIDEM dated August 1, 2013, concurring with the March 22, 2013 Response to Comments letter and requesting the Response to Comments letter be revised for recent updates on public involvement activities at the Tidewater Site and that the PIP be finalized.

Copies of the correspondence referenced above are attached to this letter. For your convenience, the comments received are repeated below followed by National Grid's responses in *italics*.

**January 28, 2013 Letter**

1. Comment: The information in the boards should be provided in the three primary languages of the community, which are English, Spanish and Portuguese. I was concerned that National Grid seemed to reject a request made during the interviews for information to be translated into both Spanish and Portuguese. I want to underscore the importance of providing information in the community's languages.

*Response: Going forward, National Grid will provide the following documents in English, Spanish and Portuguese: 1) Notification Mailings, 2) Fact Sheets and 3) Executive Summaries that will accompany future reports.*

2. Comment: I look forward to the incorporation of the color-coded alert system.

*Response: We implemented the color-coded alert system on the bulletin boards and on the website home page ([www.tidewatersite.com](http://www.tidewatersite.com)) during the recent substation upgrade project. The system involves posting different color sheets to indicate when excavation is active (yellow sheet) and not active (blue sheet).*

3. Comment: I am very pleased that National Grid has proposed to create a color-coded map of Tidewater site hazards to the public as part of the PIP. Despite years of communications about the hazards on the site, the members of the stakeholder group are still unclear about concentrations of particular hazards, and where they are located. Thus, I am eager to see this map.

*Response: A color-coded map for the Tidewater project that illustrates areas of the Site where impacts have been identified in groundwater and soils has been finalized. It was presented at the Community Information Session held on March 27, 2013. The final map was posted on the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)) and the bulletin boards. The map has been provided in the revised PIP as Figure 4 and is entitled "Observed Impacts".*

4. Comment: In regards to the first concern, I agree with the characterization of a public involvement process laid out on page 1 of the Draft PIP, as "an agreement between the party conducting response actions and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the site." This definition identifies the public as important partner in the remediation process. Since the public's interests vis-à-vis the remediation process diverge in important ways from those of the property owner, the public must have the ability to shape the remediation, and the precautions that are taken during the remediation process. I am concerned, however, that the Draft PIP construes public participation narrowly, as informing the public about work plans that have already been developed.

For example, on page 8, in describing the process through which a final remediation plan for the site will be determined, the Draft PIP states that RIDEM will issue a Program Letter when it has concluded that "the site has been adequately assessed" in the Site Investigation Report. The Draft PIP continues that "Following receipt of the Program Letter, National Grid will notify [various parties]... that the investigation is complete and that RIDEM has concurred with the recommended remedial alternative... Subsequent to this public notification and following receipt of any public comments, the Department will issue a Remedial Decision Letter formally approving the SIR." In this description, the identification and approval of a remedial strategy are depicted as occurring apart from public involvement. This negates the role of the public in the decision-making process. Moreover, I believe that it is a mischaracterization of the process through which remediation strategies are determined. It is my understanding that the Program Letter solely certifies that RIDEM has determined that the proposed remedy meets the criteria for an acceptable remedy. I understand that the final determination of a remedy cannot be made until members of the community are given an opportunity to consider the proposal, and to convey their concerns to RIDEM.

The characterization of the process through which a Remedial Action Work Plan (RAWP) is identified and selected in the Draft PIP similarly neglects the role of the public. Though the text states that “Many of the above remedial process steps will be accompanied by public meetings and comment periods” (p.8), I find it disconcerting that the public’s role in shaping the remediation process is not included in National Grid’s description of the decision-making process. This view of public involvement as a process whereby National Grid officials inform the public about the remediation process carries through to other sections of the Draft PIP. For example, in the section on Community Meetings, meetings are depicted as opportunities for National Grid representatives to inform community members about the work that has been and will be undertaken in the site. Though informing the community is crucial for facilitating their involvement in the process, it is not sufficient. The document also states that meetings will be held “in conjunction with... Departmental approval of the Remedial Action Work Plan; [and]prior to remedy implementation” (p.14). This neglects the crucial role the public will have in shaping the RAWP.

The PIP should be revised to indicate clearly that potential work plans will be presented in community meetings, and that community concerns will be solicited to ensure that the final work plans reflect the concerns and needs of the public. Opportunities for community members to comment on the proposed plans and thereby shape the remediation process should be clearly laid out in the meeting agendas, and in the scheduling of meetings (in relation to RIDEM’s final decisions about work at the site).

*Response: We are committed to providing the community with opportunities to review and comment on National Grid’s plans to remediate the Tidewater Site. National Grid has revised the PIP to include a public meeting related to the draft Remedial Action Work Plan (RAWP – the document that will be submitted to RIDEM to present the details of how the remedy will be implemented) to provide further opportunity for the public to comment on the Site remediation process. The public meeting regarding the draft RAWP will be held within 12 months of receipt of the Remedial Decision Letter (RDL – letter issued by RIDEM to formally agree with the findings of the Site Investigation Report). This meeting will be held prior to the submittal of the final RAWP to RIDEM and will provide the public an opportunity to provide comment on the remedial strategy for the Tidewater Site. The process going forward and as outlined in the PIP is intended to provide a means of effective “two-way communication” between the public and National Grid. The Initial Community Meeting (which will follow RIDEM’s review of the Site Investigation Report) will provide the public an opportunity to provide comment on the conceptual remedial strategy for the Tidewater Site. The process outlined in the PIP, which follows the requirements of the Remediation Regulations, provides the public opportunity to comment on the remedial process; however, it is noted that RIDEM is ultimately responsible for the final remedial analysis and decisions on the final remedial strategy for the Site.*

5. Comment: In regards to my second concern, one of the requests most of the interviewees made was for National Grid to make data from air monitoring available in real time to the community. While meeting with representatives from National Grid and RIDEM during the early Fall of 2012, we learned that this was not possible with the particular hand held devices being used to monitor emissions during the current electrical substation upgrade. Moreover, RIDEM representatives at the meeting seemed to concur that the small-scale nature of the work and the limited extent of contaminants in the soil did not warrant the more costly kind of air monitoring technologies that enable real-time posting of readings. I am very concerned to see that the particular scheme we agreed to for monitoring emissions and making the results available to community members during the substation upgrade is replicated in the Draft PIP. National Grid and GZA officials should be clear that the substation upgrade was classified as separate from the remediation process, which is why the work could be completed without presenting it to the public. As we look ahead to the full remediation, the particular air monitoring strategies, and techniques for communicating information about the results of that monitoring to the community, will need to be determined in conversation with the community about the particular threats posed by particular actions.

*Response: The PIP has been revised to delete the reference to posting weekly air monitoring data. Air monitoring plans for full-scale remediation of the Tidewater Site have not been developed as the final remedy for the project has not been approved by the RIDEM. The public will have an opportunity to comment and engage in a conversation about the proposed air monitoring program during the RAWP comment process described above.*

**February 12, 2013 Letter**

1. Comment: Page 2 – The draft PIP states: “This plan is not intended to cover Site activities relative to day-to-day operations of the natural gas regulating facility and electrical substation or other uses of the property by National Grid.” Since community members and parents from nearby schools have already met with GZA, RIDEM, and National Grid regarding substation upgrades and earthwork, especially with regard to improving air monitoring plans in relation to this work, which falls outside the official remediation plan, I would ask that this sentence be clarified to ensure that residents can expect to be informed and be invited to actively participate in the shaping of any plans for the site that would require disturbance to soil or otherwise create a potential public health risk. Some of these activities could be interpreted, potentially, as “day-to-day operations”, and therefore this statement should be clarified to clearly differentiate between actual day-to-day operations and other operations that are not specifically included in the remediation but will disturb soil, create potential emissions, etc.

*Response: National Grid has revised the PIP to clarify this sentence as follows: “This plan is not intended to cover Site activities relative to the day-to-day operations, including repair and maintenance of the natural gas regulating facility and electrical substation involving minor soil disturbances (i.e., fence post installation) or other uses of the property by National Grid. Activities at these facilities involving excavations of soils with the potential to create volatile emissions are covered by this PIP. In the event of a facility emergency requiring immediate soil excavation (utility repair, etc.), National Grid will follow the soil management procedures prepared for the previous natural gas station regulator and electrical substation work (i.e., April 2011 Materials Management Plan and November 2012 Soil Management Plan, respectively). In addition, air monitoring will be completed during these emergency events in accordance with the September 28, 2012, air monitoring summary memorandum submitted to RIDEM to the extent practical.”*

2. Comment: Page 17 – The Pawtucket Public Library will serve as a repository for all of the documents and other information related to the site. I suggest posting a sign or poster at the Library itself (not just on the fence at the Tidewater site) to let the general public know that this repository exists.

*Response: Information about public repositories for the Tidewater project is posted on the bulletin boards at the end of Tidewater Street and Bowles Court. National Grid contacted the Pawtucket Public Library and posted a sign in English, Spanish and Portuguese to provide more information about the Tidewater Site. These signs were posted on October 8, 2013. Copies of the signs are provided in Exhibit I of the October 2013 PIP.*

3. Comment: Page 19 – If there are revisions proposed for the PIP in the future, National Grid will prepare a revised draft for review and approval by the public and RIDEM. National Grid should prepare a summary sheet to list all of the proposed changes/revisions, as well as the final approved revisions, not simply post the proposed revised draft of the full PIP online and in the physical repository (even if the changes/revisions are highlighted in the full document). This summary sheet should be a separate document to make it easy for the public to access, read, and digest the proposed, and then approved, changes.

*Response: While future revisions to the PIP will not re-open the formal draft and public comment period, we will prepare and make available a summary sheet of proposed and approved changes/revisions for*

*the public. A summary sheet of RIDEM-approved changes to the November 2012 Draft PIP is included as Exhibit V.*

4. Comment: In response to concerns raised by residents living on Thornton Street, immediately adjacent to the site, regarding natural gas odors and the possibility of air impacts from the groundwater contamination, I suggest addressing these issues at the poster session National Grid is hosting in the near future. In particular, addressing the issue of vapor intrusion into homes and schools should be a top priority. EJLRI receives technical assistance through an EPA program that assists organizations and community residents in understanding technical information related to Brownfields contamination and remediation. Upon her review of the draft remedial plan submitted to RIDEM by National Grid, our consultant from the New Jersey Institute of Technology recommended the following:

#### VAPOR INTRUSION INVESTIGATION

Some of the chemicals (volatile compounds) identified at the site have the potential to travel through the soil as vapors. These vapors may then move up through the soil into nearby buildings, contaminating indoor air. Therefore, if a vapor intrusion investigation has not been completed, a vapor intrusion investigation is recommended to determine whether the occupants of neighboring buildings are at risk for exposure to VOCs due to vapor intrusion.

We will be submitting a final version of the consultant's review at the appropriate time (when public comments are being accepted on the SIR/recommended remedial alternative), but I wanted to share this recommendation because it speaks directly to concerns raised by residents at the last meeting.

*Response: We understand that nearby neighbors are concerned about vapor intrusion. Based on a number of factors – the way groundwater is distributed and moves at the Site, the way contaminants are distributed at the Site, and the distance from off-Site buildings to the nearest Site impacts- the potential for vapor intrusion into off-Site buildings, including the residences on Thornton Street or the neighboring schools, has not been identified as a potential pathway of concern for the Tidewater Site.*

*In response to public concern, National Grid conducted soil gas sampling during July and August 2013 in the interior portion of the Tidewater Site and along the perimeter of the Tidewater Site. The results of the interior soil gas testing are consistent with previous soil and groundwater testing at the Tidewater Site. While certain compounds were detected at low levels, none of the perimeter soil gas readings exceeded regulatory criteria established by the Connecticut Department of Energy and Environmental Protection (CTDEEP) for both residential and industrial/commercial settings. (Rhode Island does not have regulatory criteria for soil gas quality.) The results showed the closer the samples got to the boundary of the Site, the lower the concentrations of these compounds. Overall, the test results indicate that potential migration of impacted soil gas from the Tidewater Site towards neighboring properties and structures does not pose a risk to the neighbors.*

*National Grid provided a fact sheet/summary, a figure and analytical soil gas results to RIDEM describing the soil gas sampling and preliminary results on August 28, 2013 and posted this information to the Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)). Availability of this information was provided via email to those recipients of the Tidewater email distribution lists. A copy of this fact sheet is included in Exhibit I. National Grid submitted a comprehensive report describing this soil gas study and the results to RIDEM in October 2013. This comprehensive report was also posted on the Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)).*

*To address the question regarding natural gas odors in the neighborhood, National Grid had representatives available from gas operations at the Community Outreach Session held on March 27, 2013 to discuss the natural gas odor concerns raised by the community.*

*Natural gas is typically "odorless" from the well head. Federal and State law mandates that gas must be detectable by a person with an average sense of smell. As a result, pipeline operators and in some cases distribution system operators inject a malodorous material called mercaptan, commonly referred to as "odorant". Federal law also mandates that odorant added to a pipeline must not be harmful to people, pipe or other devices. National Grid does have Level 3 gas leaks (defined as a non-hazardous leak; periodic monitoring required) in our gas distribution system. Level 3 leaks do not present a risk to public health or safety. National Grid monitors the leaks and is adhering to the strict Federal and State standards. In addition, a leak in the neighborhood near the Site was repaired in March 2013. If members of the neighborhood or community smell gas, they should notify National Grid immediately (1-800-640-1595) and we will investigate the odor.*

5. Comment: The draft PIP is strong overall, but lacks specifics on how to best engage parents at the local schools. Principals at the schools may not be the best, or only, individuals to notify regarding upcoming work, air monitoring results, public meeting notices, etc. In fact, they can be bottlenecks for getting information out to the wider school community. Suggestions raised at the meeting to engage the Pawtucket Schools Superintendent, the school committee, etc. are all very good, but also are not enough to get through to individual parents. Signs or posters with general information posted at the front offices of the schools adjacent to the site would be a good start (and/or at student pick-up locations), as well as providing copies of public notices to all parents via their child's backpacks, as suggested by the principal at Varieur Elementary, would also help ameliorate this problem. Not all notices need to be sent home via backpacks, but any public meeting announcements should be, as should an initial introductory letter or handout with an overview of the site history and current status, including who to contact for more information. National Grid should work with the principals at the three schools to send this introductory info sheet/letter home with all students as soon as possible.

*Response: We provide notifications to those on the mailing/email list, which includes the principals of the neighboring schools. If the principals need assistance in distributing these notifications, we would be happy to help. The best way to find out information currently is to sign-up to the Tidewater mailing/email list via the National Grid website ([www.tidewatersite.com](http://www.tidewatersite.com)). National Grid encourages all parents/community members to sign up so that they can receive information directly from National Grid. Any interested party is also welcome to contact National Grid's Project Manager, Michele Leone, directly at 781-907-3651.*

*National Grid contacted the three neighboring schools and posted a sign in English, Spanish and Portuguese to provide more information about the Tidewater Site. These signs were posted on October 8, 2013. Copies of the signs are provided in Exhibit I of the October 2013 PIP. National Grid has prepared an updated fact sheet which was distributed on March 4, 2013, through the mailing and email lists, as well as via door-to-door flyers to the neighboring community. This fact sheet included information about the former Tidewater facility, recent activities at the Site, public involvement activities and next steps for the Site. The fact sheet accompanied a notification letter regarding the date, time and place of the upcoming Community Outreach Session. National Grid distributed this notification package to the schools on March 6, 2013, to be sent home with the students via backpacks. National Grid will continue to work with the principals about sending mailing list items (flyers, fact sheets and public notifications) in multiple languages home with the students via backpacks.*

6. Comment: Lastly, I would like to ask National Grid, GZA, and RIDEM to respond to how phytoremediation might play into the overall remediation strategy for this site, and/or if this approach has been discussed at all in relation to the Tidewater Site.

*Response: We considered phytoremediation but concluded that it is not a feasible remedial alternative for the following reasons:*

- *The depth of the treatment zone is limited by the depth of the root material of the plants.*
- *The contaminants at the former Tidewater facility are located at depth greater than two feet below the ground which is too deep for phytoremediation.*
- *The nature of certain impacts at the Tidewater Site, including separate phase product (in other words, coal tar or oils), are not amenable to treatment via phytoremediation.*  
*Due to these limitations, phytoremediation is not deemed appropriate as a potential remedial alternative for the former Tidewater facility.*

**Updates to Responses to Comments from the January 29, 2013 Public Meeting**  
**Open Comments and Questions Received:**

1. Audience member requested that technical documents be translated into “everyone speak” language.

*National Grid will continue to make every effort to use brief and nontechnical terminology in communications with members of the public. In an effort to meet this request, National Grid has hired a communications consultant to assist in the preparation of documents.*

2. Audience member spoke about historical mercury spill and lasting impact on concern from neighborhood. Audience member enquired about money from court settlement and publicly available information regarding mercury spill. He requested that information about the mercury spill, as it pertains to the history of the Tidewater Site, be included on the website and presented during the poster board session.

*National Grid did not own the property when the mercury spill took place in 2004 and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid purchased the property from Southern Union but did not acquire Southern Union’s liability for the mercury issues on the property. The mercury contamination from the 2004 spill has been cleaned up and removed from the property. In addition, the buildings have been checked for mercury and no mercury is currently stored on the property. National Grid stated that the files associated with the mercury spill are public information and can be reviewed through RIDEM.*

The audience member further requested that information on the mercury spill be posted on the National Grid website.

*National Grid explained that it was not liable for the mercury release and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid indicated that it would consider the request and provide a formal response in the response to comments on the PIP.*

*The following additional response was prepared by RIDEM and provided to National Grid following the January 2013 public meeting. RIDEM updated this information in August 2013. National Grid was not involved in preparation of this response or involvement in the Southern Union Case.*

*“In June 2012, the U.S. Supreme Court remanded an \$18-million sentence against the owners of New England Gas in a case that stemmed from the 2004 mercury spill at a Pawtucket housing project. The ruling puts at question the \$12 million in damages that were to have gone to Rhode Island environmental groups (the majority of which were to be managed by the Rhode Island Foundation, in order to fund grants in environmental education, remediation, conservation, and children’s health). The remaining \$6*

million was a fine. The Supreme Court case hinged on circumstances that require juries -- not judges -- to set penalties after criminal convictions, so the ruling does not change the 2008 conviction of Texas-based Southern Union Co. for illegal storage of the hazardous material that belonged to a former subsidiary. But the ruling means the Supreme Court remanded the case for further proceedings in US District Court (RI) consistent with this opinion. The June 2012 Supreme Court Decision can be found at <http://www.supremecourt.gov/opinions/11pdf/11-94a1b2.pdf>. The US District Court heard oral arguments in December 2012 in an attempt to determine how to properly proceed with the case from here. On April 25, 2013, the US District Court (RI) issued a preliminary sentencing memorandum on the Southern Union penalty related to the improper storage of waste mercury at their facility in Pawtucket. Due to the June 2012 Supreme Court decision, the US District Court (RI) is limited to fining Southern Union \$500,000 or the equivalent in community service, rather than the \$6 million fine and \$12 million in charitable contributions that had previously been imposed as punishment. The Court allowed prosecutors, Southern Union and unspecified members of the greater environmental community 90 days to suggest a community service proposal valued at no more than \$500,000 and will schedule sentencing once proposals are received and reviewed. " – Communications from RIDEM

3. Audience member commented on gas smell at Thornton and Merry Streets and whether or not they are safe or being exposed to natural gas (or its additives).

*The odor that the audience member says he smelled is likely associated with mercaptan. Natural gas by itself is odorless. Mercaptan is an odorant that is added to natural gas so the gas can easily be detected. It is carried with the natural gas stream.*

*To address the question regarding natural gas odors in the neighborhood, National Grid had representatives available from gas operations at the Community Outreach Session held on March 27, 2013 to discuss the natural gas odor concerns raised by the community.*

*In addition, refer to the response above for Comment 4 of the February 12, 2013 comment letter regarding "natural gas odors."*

*If members of the neighborhood or community smell gas, they should notify National Grid immediately (1-800-640-1595) and we will investigate the odor.*

4. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI) introduced herself and her agency to the audience. She indicated that EJLRI had access to funds from the US Environmental Protection Agency (USEPA) and could be used as a resource to the community. She also suggested that National Grid have a poster board regarding vapor intrusion during the Community Informational Session to educate the public.

*Refer to the response above for Comment 4 of the February 12, 2013 comment letter regarding "vapor intrusion investigation."*

*RIDEM also added that the potential for volatilization of contaminants from the Site is not supported by the results of the recent air monitoring program (hand held field instruments) which is being followed as part of the electrical substation project.*

5. Audience member suggested that Cape Verdean be added as a language to the translation list. Also suggested that Oak Hill Nursing Home be added to the distribution list.

*National Grid understands that Cape Verdean is a dialect of Portuguese. Based on discussions with a translation service, we also understand that documents translated in Portuguese should be understood by people who speak Cape Verdean. Therefore, National Grid does not plan to provide documents in*

*Cape Verdean. If a community member requires assistance or translation other than Spanish and Portuguese, please contact Michele Leone at National Grid.*

*National Grid has added Oak Hill Nursing Home to the door to door flyer distribution list during the March 4, 2013 mailing. See Figure 3, Door-to-Door Notification for the updated distribution area.*

### **March 6, 2013 Email**

(1) National Grid should develop separate communication materials for schools – and provide enough copies to give place one in each student’s backpack.

*National Grid will continue to work with the principals to get materials out to parents via backpacks. To avoid confusion in disseminating this information, National Grid will work directly with the principals and other stakeholders.*

(2) School principals want to review all of the fliers/documents that will be sent to parents before NG makes copies, translates, or finalizes the communication, to make sure they communicate effectively. Julie Nora (ICS) and Carolyn Sheehan (Blackstone Valley) made this suggestion.

*National Grid will work with the principals to ensure that they are comfortable with the documents we provide to them for distribution.*

(3) Neighbors also want to review materials before NG sends out communications to neighborhood – point person can be Amelia Rose at EJ League who can send out draft to list of neighbors and collate comments/suggestions within one week and send back to NG for finalization (worry is that the communications are too wordy and will not be read).

*National Grid is working with a communications consultant in order to make mailings more easily understood by the community in response to this concern. Given this, National Grid will not be providing drafts of our communications to the neighbors prior to distribution. We continue to appreciate the community’s input on the communications and welcome suggestions on how to further improve this process.*

(4) Hold regular meetings with a core group of residents and school personnel to give NG/GZA a chance to communicate in a smaller group setting – in addition to the larger public meetings that happen less frequently. This will help increase communication with the most committed/involved residents and school officials who will be ambassadors to other residents and the wider school community to generate their interest and involvement. Also will make larger public meetings less adversarial and more productive because it won’t be the first time people are hearing about a certain issue or proposal.

*National Grid designed the public involvement plan (PIP) to involve all community members and interested parties. National Grid believes that the large number of public meetings and the commitment to schedule additional meetings on an as-needed basis pre-empts the need for smaller, stakeholder meetings. Community members are strongly encouraged to contact Michele Leone at any time throughout the site cleanup process by calling 781-907-3651 or via email at [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com) should they have questions or comments.*

(5) Translation at larger public meetings should be made available regardless of whether someone contacts NG to say they are coming to a meeting – this would help build trust with the neighborhood and principals could guarantee to parents that interpretation would be available at public meetings no matter what.

*At all public meetings, translation assistance will be provided for non-English speaking individuals, upon request. Requests can be made to Michele Leone by calling 781-907-3651 or via email at michele.leone@nationalgrid.com.*

(6) NG should create bookmarks with all relevant contact information as well as instructions for how people can get on the email/phone notification lists. These will be helpful to hand out in the neighborhood and at the schools and would be more likely to be read and communicate effectively – rather than a long letter.

*National Grid created magnets with the requested information which were available at the Community Outreach Session held on March 27, 2013.*

A bulleted summary of the proposed revisions to the PIP, as discussed above, is included in the revised PIP as Exhibit V.

Should you have any questions or comments regarding the information presented herein, please do not hesitate to contact the undersigned or Michele Leone at 781-907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

RE: Tidewater Manufactured Gas Plant (former)  
Tidewater Street  
Pawtucket, Rhode Island

Dear Ms. Leone:

On November 9, 2011, the Rhode Island Department of Environmental Management (the Department) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases, (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in an efficient manner.

In the matter of the above referenced "Site" (as defined in the Industrial Property Remediation and Reuse Act), and in accordance with Rule 7.07.E (Public Involvement Plans) of the 2011 Remediation Regulations, the Department's Office of Waste Management (OWM) has received the following documents concerning public comments on the draft Public Involvement Plan (PIP):

1. Letter from Holly Dygert to the Department, Re: Tidewater Site Public Involvement Plan, dated January 27, 2013, and received via e-mail on January 28, 2013; and
2. Comments re: Draft Public Involvement Plan, Former Tidewater Facility and Former Power Plant, Tidewater and Merry Streets, Pawtucket, Rhode Island, prepared by the Environmental Justice League of Rhode Island (EJLRI), received via e-mail on February 12, 2013.

In addition, National Grid received several comments at the public meeting for the draft PIP held on January 29, 2013.

Please review these submitted comments along with those received at the public meeting and prepare written responses to each of them as appropriate. A completed document, incorporating responses all of the comments, must be submitted to the Department for review and approval.

**All correspondence regarding this Site should be sent to the attention of:**

Joseph T. Martella II – Senior Engineer  
RIDEM / Office of Waste Management  
235 Promenade Street  
Providence, RI 02908

If you have any questions regarding this letter, please contact me by telephone at (401) 222-2797 extension 7109 or by e-mail at [joseph.martella@dem.ri.gov](mailto:joseph.martella@dem.ri.gov).

Sincerely,

Joseph T. Martella II

Mr. Joseph Martella II, Senior Engineer  
RIDEM Office of Waste Management  
Site Remediation Program

Re: Tidewater Site Public Involvement Plan

Dear Mr. Martella,

I am very pleased that RIDEM has implemented a public involvement mechanism to ensure that members of the community who may be exposed to hazards are involved in the remediation process. I reviewed National Grid's draft Public Involvement Plan (PIP) for the Tidewater Site, and I am also very pleased with many of the actions National Grid has proposed to take to ensure that those potentially impacted by the work at Tidewater are informed of the work. I am writing to communicate my suggestions for strengthening the proposed PIP. These suggestions are aimed, first, to optimize the ability of those who could be impacted by the site's hazards to access information about the nature of these hazards and about potential routes of exposure, and, second, to ensure that they are able to influence the process in accordance with their particular concerns.

I appreciate that National Grid solicited comments from the community through the interview process in June of 2012, and provided a synthesis of the suggestions in the *Draft PIP*. National Grid has already acted on many of these suggestions, and has integrated many of them into the proposed PIP. The community bulletin boards – with announcements and the results of weekly air monitoring – are very useful communication tools. I look forward to the incorporation of the color-coded alert system. The information in the boards should be provided in the three primary languages of the community, which are English, Spanish and Portuguese. I was concerned that National Grid seemed to reject a request made during the interviews for information to be translated into both Spanish and Portuguese. I want to underscore the importance of providing information in the community's languages.

I am very pleased that National Grid has proposed to create a color-coded map of Tidewater site hazards to the public as part of the PIP. Despite years of communications about the hazards on the site, the members of the stakeholder group are still unclear about concentrations of particular hazards, and where they are located. Thus, I am eager to see this map. I am also pleased that National Grid is proposing a Community Outreach (poster) Session, and possibly a tour of the site.

While I am generally satisfied with the strategies National Grid has proposed to convey information to the public, I have two main concerns. The first is that the *Draft PIP* largely neglects the public's role in shaping the remediation process. The second is that the particular

strategy for monitoring air quality that was agreed on for the electrical substation upgrade is included in the *Draft PIP* as the plan for the remediation.

In regards to the first concern, I agree with the characterization of a public involvement process laid out on page 1 of the *Draft PIP*, as “an agreement between the party conducting response actions and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the site.” This definition identifies the public as important partner in the remediation process. Since the public’s interests vis-à-vis the remediation process diverge in important ways from those of the property owner, the public must have the ability to shape the remediation, and the precautions that are taken during the remediation process. I am concerned, however, that the *Draft PIP* construes public participation narrowly, as informing the public about work plans that have already been developed.

For example, on page 8, in describing the process through which a final remediation plan for the site will be determined, the *Draft PIP* states that RIDEM will issue a Program Letter when it has concluded that “the site has been adequately assessed” in the Site Investigation Report. The *Draft PIP* continues that “Following receipt of the Program Letter, National Grid will notify [various parties]... that the investigation is complete and that **RIDEM has concurred with the recommended remedial alternative**... Subsequent to this public notification and following receipt of any public comments, the Department will issue a Remedial Decision Letter formally approving the SIR.” In this description, the identification and approval of a remedial strategy are depicted as occurring apart from public involvement. This negates the role of the public in the decision-making process. Moreover, I believe that it is a mischaracterization of the process through which remediation strategies are determined. It is my understanding that the Program Letter solely certifies that RIDEM has determined that the proposed remedy meets the criteria for an acceptable remedy. I understand that the final determination of a remedy cannot be made until members of the community are given an opportunity to consider the proposal, and to convey their concerns to RIDEM.

The characterization of the process through which a *Remedial Action Work Plan* (RAWP) is identified and selected in the *Draft PIP* similarly neglects the role of the public. Though the text states that “Many of the above remedial process steps will be accompanied by public meetings and comment periods” (p.8), I find it disconcerting that the public’s role in shaping the remediation process is not included in National Grid’s description of the decision-making process. This view of public involvement as a process whereby National Grid officials inform the public about the remediation process carries through to other sections of the *Draft PIP*. For example, in the section on Community Meetings, meetings are depicted as opportunities for National Grid representatives to inform community members about the work that has been and will be undertaken in the site. Though informing the community is crucial for facilitating their involvement in the process, it is not sufficient. The document also states that meetings will be held “in conjunction with... Departmental approval of the *Remedial Action Work Plan*; [and]

prior to remedy implementation” (p.14). This neglects the crucial role the public will have in shaping the RAWP.

The *PIP* should be revised to indicate clearly that potential work plans will be presented in community meetings, and that community concerns will be solicited to ensure that the final work plans reflect the concerns and needs of the public. Opportunities for community members to comment on the proposed plans and thereby shape the remediation process should be clearly laid out in the meeting agendas, and in the scheduling of meetings (in relation to RIDEM’s final decisions about work at the site).

In regards to my second concern, one of the requests most of the interviewees made was for National Grid to make data from air monitoring available in real time to the community. While meeting with representatives from National Grid and RIDEM during the early Fall of 2012, we learned that this was not possible with the particular hand held devices being used to monitor emissions during the current electrical substation upgrade. Moreover, RIDEM representatives at the meeting seemed to concur that the small-scale nature of the work and the limited extent of contaminants in the soil did not warrant the more costly kind of air monitoring technologies that enable real-time posting of readings. I am very concerned to see that the particular scheme we agreed to for monitoring emissions and making the results available to community members during the substation upgrade is replicated in the *Draft PIP*. National Grid and GZA officials should be clear that the substation upgrade was classified as separate from the remediation process, which is why the work could be completed without presenting it to the public. As we look ahead to the full remediation, the particular air monitoring strategies, and techniques for communicating information about the results of that monitoring to the community, will need to be determined in conversation with the community about the particular threats posed by particular actions.

In closing, I want to reiterate my support for the PIP process that RIDEM has adopted, and that National Grid has begun to develop. I look forward to continuing to work with RIDEM and National Grid to develop an effective plan for ensuring optimal public involvement.

Sincerely,

Holly Dygert

*Comments re: Draft Public Involvement Plan, Former Tidewater Facility and Former Power Plant, Tidewater and Merry Streets, Pawtucket, Rhode Island*

Dear Mr. Martella,

I am submitting the following comments on behalf of the Environmental Justice League of Rhode Island (EJLRI) regarding the draft Public Involvement Plan (PIP) prepared by GZA on behalf of their client, National Grid, the responsible party for the Tidewater Site.

I have listed a few specific comments first, followed by more general suggestions for the PIP overall.

Page 2 – The draft PIP states: “This plan is not intended to cover Site activities relative to day-to-day operations of the natural gas regulating facility and electrical substation or other uses of the property by National Grid.” Since community members and parents from nearby schools have already met with GZA, RIDEM, and National Grid regarding substation upgrades and earthwork, especially with regard to improving air monitoring plans in relation to this work, which falls outside the official remediation plan, I would ask that this sentence be clarified to ensure that residents can expect to be informed and be invited to actively participate in the shaping of any plans for the site that would require disturbance to soil or otherwise create a potential public health risk. Some of these activities could be interpreted, potentially, as “day-to-day operations”, and therefore this statement should be clarified to clearly differentiate between actual day-to-day operations and other operations that are not specifically included in the remediation but will disturb soil, create potential emissions, etc.

Page 17 – The Pawtucket Public Library will serve as a repository for all of the documents and other information related to the site. I suggest posting a sign or poster at the Library itself (not just on the fence at the Tidewater site) to let the general public know that this repository exists.

Page 19 – If there are revisions proposed for the PIP in the future, National Grid will prepare a revised draft for review and approval by the public and RIDEM. National Grid should prepare a summary sheet to list all of the proposed changes/revisions, as well as the final approved revisions, not simply post the proposed revised draft of the full PIP online and in the physical repository (even if the changes/revisions are highlighted in the full document). This summary sheet should be a separate document to make it easy for the public to access, read, and digest the proposed, and then approved, changes.

In response to concerns raised by residents living on Thornton Street, immediately adjacent to the site, regarding natural gas odors and the possibility of air impacts from the groundwater contamination, I suggest addressing these issues at the poster session National Grid is hosting in the near future. In particular, addressing the issue of vapor intrusion into homes and schools should be a top priority. EJLRI receives technical assistance through an EPA program that assists organizations and community residents in understanding technical information related to Brownfields contamination and remediation. Upon her review of the draft remedial plan submitted to RIDEM by National Grid, our consultant from the New Jersey Institute of Technology recommended the following:

#### VAPOR INTRUSION INVESTIGATION

Some of the chemicals (volatile compounds) identified at the site have the potential to travel through the soil as vapors. These vapors may then move up through the soil into nearby buildings, contaminating indoor air. Therefore, if a vapor intrusion investigation has not been completed, a vapor intrusion investigation is recommended to determine whether the occupants of neighboring buildings are at risk for exposure to VOCs due to vapor intrusion.

We will be submitting a final version of the consultant's review at the appropriate time (when public comments are being accepted on the SIR/recommended remedial alternative), but I wanted to share this recommendation because it speaks directly to concerns raised by residents at the last meeting.

The draft PIP is strong overall, but lacks specifics on how to best engage parents at the local schools. Principals at the schools may not be the best, or only, individuals to notify regarding upcoming work, air monitoring results, public meeting notices, etc. In fact, they can be bottlenecks for getting information out to the wider school community. Suggestions raised at the meeting to engage the Pawtucket Schools Superintendent, the school committee, etc. are all very good, but also are not enough to get through to individual parents. Signs or posters with general information posted at the front offices of the schools adjacent to the site would be a good start (and/or at student pick-up locations), as well as providing copies of public notices to all parents via their child's backpacks, as suggested by the principal at Varieur Elementary, would also help ameliorate this problem. Not all notices need to be sent home via backpacks, but any public meeting announcements should be, as should an initial introductory letter or handout with an overview of the site history and current status, including who to contact for more information. National Grid should work with the principals at the three schools to send this introductory info sheet/letter home with all students as soon as possible.

Lastly, I would like to ask National Grid, GZA, and RIDEM to respond to how phytoremediation might play into the overall remediation strategy for this site, and/or if this approach has been discussed at all in relation to the Tidewater Site.

Sincerely,

A handwritten signature in cursive script that reads "Amelia Rose". The signature is written in dark ink and is positioned below the word "Sincerely,".

Amelia Rose, Director

Re: *Meeting Summary - January 29, 2013*  
Draft Public Involvement Plan  
Former Tidewater MGP and Power Plant Site  
Pawtucket, Rhode Island  
*RIDEM Case No. 95-022*

Dear Mr. Martella:

On behalf of our client, The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental Inc. (GZA) is pleased to provide the attached summary of the January 29, 2013 public meeting associated with the Former Tidewater Manufactured Gas Plant (MGP) and Power Plant Site located in Pawtucket, Rhode Island (the Site). The purpose of the public meeting was to discuss public comments to the draft Public Involvement Plan (PIP) which was submitted to the Department on November 26, 2012.

Should you have any questions or comments regarding the information presented herein, please do not hesitate to contact the undersigned or Michele Leone at 781-907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

A handwritten signature in blue ink, appearing to read "M. Kilpatrick", is written over a faint, larger version of the signature.

Summary of Meeting  
 DRAFT Public Involvement Plan (PIP)  
 Former Tidewater Facility  
 Pawtucket, Rhode Island

January 29, 2013 6 PM  
 Francis J. Varieur Elementary School  
 486 Pleasant Street  
 Pawtucket, Rhode Island

- **Introduction to Meeting – Michele Leone (National Grid Representative)**
- **Presentation of DRAFT PIP dated November 26, 2012 – Elizabeth Stone (Rhode Island Department of Environmental Management or RIDEM) and Meg Kilpatrick, P.E. (GZA GeoEnvironmental, Inc.)**

The presentation included a summary of the Draft Public Involvement Plan (PIP) for the former Tidewater Facility (the Site). The draft PIP was developed based on input from the public provided during the community interviews completed in June 2012, as well as input from RIDEM. It provides a blueprint for keeping the public informed during the site cleanup process. It also presents how the public can participate in the process and comment on the project. A PIP is a living document and can be amended to reflect additional issues or challenges that may arise during the cleanup process.

National Grid submitted a draft PIP to RIDEM on November 26, 2012. The draft PIP has four components: 1) public notice, 2) fact sheets and enhanced communications, 3) community meetings and 4) information repositories. The four components are presented in the below table.

<p><b><u>Public Notice:</u></b></p> <ul style="list-style-type: none"> <li>• Mailing List (used to announce public meetings, distribute fact sheets, information about availability of reports, etc.)</li> <li>• Email List (optional)</li> <li>• Sign up at <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>• Or, send request to National Grid</li> </ul>	<p><b><u>Fact Sheets and Enhanced Communications:</u></b></p> <ul style="list-style-type: none"> <li>• Fact Sheets (used to inform of development of new information and/or achievement of significant milestones)</li> <li>• Informational Bulletin Boards (end of Tidewater Street and Bowles Court)</li> <li>• Phone Message Alert System during excavation</li> </ul>
<p><b><u>Community Meetings:</u></b></p> <ul style="list-style-type: none"> <li>• Encourages equal participation by all to create an atmosphere of constructive, open dialogue</li> <li>• Proposed Schedule and Objective of Public Meetings</li> <li>• Evening meeting time</li> <li>• Francis J. Varieur School (preferred venue)</li> </ul>	<p><b><u>Information Repositories:</u></b></p> <ul style="list-style-type: none"> <li>• Publicly Accessible Site File: RIDEM Case No. 95-022 <a href="http://www.dem.ri.gov/topics/filerevw/htm">www.dem.ri.gov/topics/filerevw/htm</a></li> <li>• Publicly Accessible Websites: <a href="http://www.tidewatersite.com">www.tidewatersite.com</a> <a href="http://www.dem.ri.gov/benviron/waste/tide/htm">www.dem.ri.gov/benviron/waste/tide/htm</a></li> <li>• Local Information Repository: Pawtucket Library (13 Summer St) Bulletin Boards: Tidewater St &amp; Bowles Ct</li> </ul>

Following the public comment period for the draft PIP, National Grid will provide a response to comments and revise the PIP as necessary for submittal to RIDEM for final review and approval.

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

National Grid will hold a community outreach session in March 2013 to present information about the Site in an informal poster-board type setting. Following this session, National Grid will hold the initial community meeting within 60 days after receipt of the Program Letter from RIDEM (issued following RIDEM’s formal review of the Site Investigation Report submitted by National Grid). The schedule of community meetings follows, and National Grid encourages participation by all to create an atmosphere of constructive, open dialogue.

ACTIVITY	TIME PERIOD
Community Outreach Session	Within 60 days of Draft PIP Meeting (March 2013)
Initial Community Meeting	Within 60 days of receipt of Program Letter – during SIR Public Comment Period
Public Meeting on DRAFT Remedial Action Approval Plan (RAWP)	Within 12 months of receipt of Remedial Decision Letter
Submit RAWP for RIDEM Approval	Within 6 months of DRAFT RAWP Meeting
Public Meeting prior to initiation of remedy	Minimum of 30 days prior to start of remediation
Public Meetings during remediation	Meeting schedule to be presented for discussion purposes once remedial schedule is developed and approved by RIDEM
Public Meeting upon completion of the remedy	Within 30 days following completion of remediation

A copy of the presentation associated with the January 29, 2013 Draft PIP meeting is posted on the National Grid Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)).

**Questions and Comments Session:** *(Responses provided in italics)*

---

National Grid provided a brief summary of written public comments received to date on the DRAFT PIP.

- Public requested that Portuguese (in addition to Spanish) be included as languages for documents requiring translation.

*National Grid stated that going forward, the following document types will be provided in English, Spanish and Portuguese: 1) Notification Mailings, 2) Fact Sheets and 3) brief Executive Summaries which will accompany future reports.*

- Public requested that color-coded alert system be implemented on the bulletin boards.

*National Grid stated that the color-coded alert system has been implemented on the bulletin boards during the recent excavation project. The system involves posting different color sheets to indicate when excavation is active (yellow sheet) and not active (blue sheet).*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

- Public requested color-coded map of Tidewater Site contaminants.

*National Grid stated that the color-coded map for the Tidewater project is being finalized and will be presented at the upcoming Community Information Session. The final map will also be posted on the National Grid website and the bulletin boards.*

- Public expressed concern that current Draft PIP does not take into account the public's role in providing input into the remediation process.

*National Grid reinforced that the process going forward and as outlined in the PIP is intended to provide a means of effective "two-way communications" between the public and National Grid. National Grid stated that the Initial Community Meeting (which will follow RIDEM's review of the Site Investigation Report) will provide the public an opportunity to provide comment on the conceptual remedial strategy for the Tidewater Site. In addition, National Grid indicated that the current draft of the PIP has been modified to include a public meeting on the draft Remedial Action Work Plan (RAWP – the document that will be submitted to RIDEM to present the details of how the remedy will be implemented) to further provide an opportunity for the public to comment on the Site cleanup process.*

- Public expressed concern that current Draft PIP does not consider air monitoring during the remediation of the Tidewater Site.

*National Grid stated that the air monitoring plans for full-scale remediation of the Tidewater Site have not been developed as the final remedy for the project has not been approved. National Grid stated that the public will have an opportunity to comment and present their concerns during future public meetings, which National Grid will incorporate into the air monitoring plan for the final remediation.*

Audience member relayed concern that draft PIP references weekly posting of air monitoring data and that inclusion of this language will set a precedent for future air quality monitoring.

*National Grid stated that the PIP will be modified to delete reference to the posting of weekly air monitoring data.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

**Open Comments and Questions Received:**

1. Audience member enquired about date for the Community Outreach Session.

*The current schedule is to have the Community Outreach Session in mid to late March 2013.*

2. Audience member enquired about what March 2013 Community Outreach Session consist of.

*The Community Outreach Session will consist of an informal meeting where information will be presented on poster boards to the public. The poster boards will include a variety of topics, including such things as "What is an Manufactured Gas Plant?" history of the Tidewater Site, findings of the investigations, demonstrations of field equipment, description of current National Grid operations at the property, etc. Each poster board will be manned by a representative from National Grid and/or GZA to answer questions. RIDEM will also be present to answer questions from the public.*

3. Audience member expressed concern about when to know when things are going on at the Site; specifically, when to leave kids inside.

*Information regarding excavation at the Site is provided through the mailing/email list, posted to the bulletin boards and posted to the Tidewater websites. The National Grid website will also be updated to include the color-coded alert system information (active and no active excavation). National Grid will also inform school principals of the schedule of work.*

4. Audience member stated that he is a parent and emphasized that it is important to remember that parents have no way to obtain information about the Site.

*National Grid provides notifications to those on the mailing/email list, which includes the principals of the neighboring schools. Due to privacy issues, National Grid does not have access to student/parent information. National Grid will continue to work with the school principals in developing an effective way to communicate with the parents. The best way to find out information currently is to sign-up to the Tidewater mailing/email list via the National Grid website. National Grid requested that audience members tell other parents/community members about this and encourage them to sign up so that they can receive information directly from National Grid.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

- Audience member stated that parents from the International Charter School want a way for the information to be communicated to the parents.

*National Grid will continue to work with the school principals in developing an effective way to communicate with the parents. National Grid encouraged parents to sign-up for the mailing and/or email lists, as well as visit the National Grid website, to obtain information.*

- Audience member stated that he/she feels that the parents have no way to determine what is going on at the site and suggested possibly implementation of additional bulletin boards.

*The bulletin boards were installed at locations proximate to the Tidewater site, as well as accessible and visible to the schools. The two site bulletin boards are located close to each of the neighboring schools. National Grid will look into the possible installation of additional bulletin boards, as well as continuing to work with the school principals in developing an effective way to communicate with the parents.*

- The principal from Blackstone Academy stated the community has various levels of technical understanding and that disseminating information about the Tidewater Site is difficult.

*In the future, National Grid will prepare simple executive summaries for major report submittals. In preparing these summaries, National Grid will make every effort to use brief and nontechnical terminology in communications to the public. In the near future, National Grid will prepare an executive summary for the recent Site Investigation Report as well as an updated Fact Sheet which will be distributed through the mailing lists, as well as placed into the information repositories. National Grid will also continue to work with the school principals in developing an effective way to communicate information to the parents.*

- Audience member stated that, as a parent, the 2- hour notice provided through the phone message alert system was not enough. In addition, notification regarding the Tidewater site needs to be provided to more parties, such as elected officials and School Committee(s). A presentation of information would be warranted.

*The mailing list established for the Tidewater project does include local elected officials as well as school representatives, including the Principals of the Blackstone Academy, International Charter School and Francis J. Varieur School, as well as the Superintendent of schools for the City of Pawtucket. National Grid would be happy to include members of the School Committee on the mailing list, upon receipt of their contact information. National Grid also is willing to meet with*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*members of the school and local government to present information about the Tidewater site and answer any questions that they may have.*

9. Audience member requested that technical documents be translated into “everyone speak” language.

*National Grid is attempting to do this and will continue to try to produce documents that are better understood by the public.*

10. Audience member asked when RIDEM will be ready to review the Site Investigation Report (SIR).

*Joseph Martella of RIDEM provided details regarding the regulatory process under the RIDEM Remediation Regulations. He indicated that the Public Involvement Plan must be finalized and in place before RIDEM’s review of the SIR can begin.*

Audience member enquired about the timing of this review and if the spring would seem reasonable.

*RIDEM indicated that it may be possible but reiterated that PIP must be finalized before the review of the SIR begins.*

11. Audience member requested that live translators be provided at public meetings.

*National Grid would be happy to provide translators, if requested by the public in advance of the meetings. Future notifications will include language regarding the availability of translators upon request by the public.*

12. Audience member spoke about historical mercury spill and lasting impact on concern from neighborhood. Audience member enquired about money from court settlement and publicly available information regarding mercury spill. He requested that information about the mercury spill, as it pertains to the history of the Tidewater Site, be included on the website and presented during the poster board session.

*National Grid did not own the property when the mercury spill took place in 2004 and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid purchased the property from*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*Southern Union but did not acquire Southern Union's liability for the mercury issues on the property. The mercury contamination from the 2004 spill has been cleaned up and removed from the property. In addition, the buildings have been checked for mercury and no mercury is currently stored on-site. National Grid stated that the files associated with the mercury spill are public information and can be reviewed through RIDEM.*

The audience member further requested that information on the mercury spill be posted on the National Grid website.

*National Grid explained that it was not liable for the mercury release was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid indicated that it would consider the request and provide a formal response in the response to comments on the PIP.*

13. Audience member concerned about Tidewater flyer that he received on his door from Environmental Justice League. The flyer depicted biohazard marker and list of chemicals with associated acute health hazards. Audience member relayed information about members of his household and neighbors being diagnosed with cancer and is concerned about what he is being exposed to at his home as he lives on Thornton Street located right next to site. He stressed that he wants to know if he is safe.

*National Grid stressed that the Site is fenced and locked to keep people off of the property. Under normal site conditions, the Site is safe to the community- in other words, there is no potential for airborne contaminants. During times of excavation, when soil is dug up and moved around, there is a potential for airborne contaminants. During soil excavation, National Grid follows an air quality monitoring program which has received public input and has been reviewed and approved by RIDEM. The results of this monitoring are posted to the bulletin boards as well as the Tidewater websites. This program was followed during the recent electrical substation upgrade project. The majority of excavation associated with this project is complete, with the exception of minor fence post installations and minor excavations associated with properly decommissioning equipment. Air data from this project did not show sustained exceedances of the thresholds (defined as being held over a 5-minute time period) at any time. A few transient exceedances of the thresholds were noted during the work which were not associated with the excavation activities (i.e., transient exceedances due to weather interference (rain), movement of trash material, orange peel, etc.) .*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

Audience member asked whether there are emissions coming from the site without moving the soil? Also, audience member wanted to know about indoor air monitoring and whether or not they should be concerned about migration/volatilization into buildings on Thornton Street.

*Contaminants from the site are not getting into the air (i.e., volatilizing) from the soil and groundwater under normal conditions (i.e., no soil being moved or disturbed). The majority of surface soils at Site are indicative of urban fill – soils which would typically be found in urban or city environments and exhibit low levels of contaminants. The majority of impacts are found below the ground surface (deeper than 2 feet) in the soils, at or below the groundwater table. In addition, the majority of soil, groundwater and separate phase product (oil) impacts are found where the historical Manufactured Gas Plant and Power Plant operations took place, primarily along the river area between Winter Street and the land behind the Max Read Field. The area where the residences are located along Thornton Street are in an area where historical operations did not occur and do not have elevated levels of observed impacts. This area is also located upgradient of the site – groundwater from the Site flows “downhill” towards the river, not towards the homes on Thornton Street. Based on this information, National Grid believes that the buildings on Thornton Street are unaffected by the migration and/or volatilization from impacts on the Tidewater Site.*

*The drawbacks to indoor air testing were also discussed, as this type of testing typically will pick up standard house hold products and chemicals, such as paint, cleaners, etc., which cannot be differentiated from possible site contaminants.*

*The findings of the drilling program in Max Read Field were also discussed. Results of the explorations indicated the presence of visually impacted soil at depths greater than 2 feet in a limited area on the eastern portion of the field. The soils at depth are not accessible (i.e., they are covered with 2 feet of visually non-impacted soil which would need to be removed). The exploration program was conducted with knowledge by the City of Pawtucket and the City is aware of the findings of the investigation.*

14. Audience member commented on gas smell at Thornton and Merry Streets and whether or not they are safe or being exposed to natural gas (or its additives).

*The odor that the audience member says he smelled is likely associated with mercaptan. Natural gas by itself is odorless. Mercaptan is an odorant that is added to natural gas so the gas can easily be detected. It is carried with the natural gas stream.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*National Grid will contact their Natural Gas Division to find out more information about this concern.*

15. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI) introduced herself and her agency to the audience. She indicated that EJLRI had access to funds from the US Environmental Protection Agency (USEPA) and could be used as a resource to the community. She also suggested that National Grid have a poster board regarding vapor intrusion during the Community Informational Session to educate the public.

*National Grid will consider adding a poster board regarding vapor intrusion to the Community Informational Session.*

*RIDEM also added that the potential for volatilization of contaminants from the site is not supported by the results of the recent air monitoring program (hand held field instruments) which is being followed as part of the electrical substation project.*

16. Audience member commented on concern regarding interfacing with the schools and the community. They suggested providing information about the site at a 4-6<sup>th</sup> grade comprehension level. Also, they requested that National Grid inform Shea High School about the impacts on the Max Read Field as they use the athletic field for sport activities.

*National Grid will look into this request and get back to the public. In the future, National Grid will prepare simple executive summaries for major report submittals. In preparing these summaries, National Grid will make every effort to use brief and nontechnical terminology in communications to the public. In the near future, National Grid will prepare an executive summary for the recent Site Investigation Report as well as an updated Fact Sheet which will be distributed through the mailing lists, as well as placed into the information repositories. National Grid will also continue to work with the school principals in developing an effective way to communicate information to the parents. Also, National Grid will consider adding Shea High School to the mailing list.*

17. Audience member suggested that Cape Verdean be added as a language to the translation list. Also suggested that Oak Hill Nursing Home be added to the distribution list.

*National Grid will consider adding Cape Verdean to the translation list. National Grid will also consider adding Oak Hill Nursing Home to the mailing list.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

18. Audience member enquired why this is the first Public Involvement Plan in RI and what is typically done in Massachusetts?

*RIDEM indicated that the Remediation Regulations were recently modified in November 2011 to include a formal Public Involvement process, similar to that established in Massachusetts. This is the first PIP in Rhode Island due to the recent change in the regulations. Massachusetts has had a PIP process in place for at least 20 years.*

19. Audience member inquired if the site is “safe,” why all the concern?

*RIDEM indicated that the Site is under the State’s guidance for a reason – there are soil and groundwater impacts at the site which do pose a certain level of exposure risk. RIDEM stressed that the fencing is also there for a reason – to prevent people from entering the Site. RIDEM also gave the example of different levels of exposure at the Site – i.e., on-site workers who are excavating soils (potential high exposure risk) versus people off-site at or near the fence line (low potential exposure risk).*

20. Audience member enquired if wildlife could present an exposure risk via soil disturbance (i.e., burrowing, digging) on site.

*GZA performs weekly site walks to inspect and document the conditions at the Site. There has not been evidence of significant soil disturbance by wildlife at the Site. In the future, we will continue to monitor soil disturbance.*

21. Audience member requested status on South Washout Area repair.

*The earthwork associated with the South Washout Area has not been completed. National Grid will continue to work with the City to have this work completed.*

22. Audience member enquired when the public will receive a response to comments.

*The schedule presented in the presentation was revisited. A summary of today’s meeting will be provided within 10 business days (by 2/12/2013). Written comments on the draft PIP from the public should be provided to RIDEM within 10 business days (by 2/12/2013). RIDEM indicated that an extension to the public comment period may be requested in writing. Timing for response to written comments will be based on how many comments are received.*

**Cc:** joseph.martella@dem.ri.gov; Amelia Rose (amelia.rose@ejlri.org); jenrossi3@gmail.com  
**Subject:** Tidewater Site communications, follow-up suggestions  
**Attachments:** PIP Recommendations Tidewater Community Group.doc

Dear Michele and Meg,

We held a meeting last week with members of the Tidewater community (school officials, parents of school children, and members of the neighborhood) to follow-up on National Grid's recent public meeting. One of the primary concerns expressed was that the language used in the outreach efforts was not accessible to most people. I personally spoke with a woman in the neighborhood who said that she keeps going to these meetings, but she doesn't understand anything that is said. I also noted that one of the attendees prefaced his comments at the meeting with, "I know I sound ignorant, but..." The school administrators, parents and residents had several suggestions of ways to make the communications more effective. We've compiled those suggestions – I am attaching the list and pasting it below.

As a college professor, I am constantly charged with translating expert knowledge into language that is accessible, often to kids coming right out of high school. I'm happy to compile a list of terms that are hard for non-specialists to understand (e.g., remedy, remediation, cap, program letter, abutter, action limits...). The list of definitions that National Grid provided in a former communication is a step in the right direction, but it would be better to replace those specialized terms with more accessible alternatives.

On a different note, can you tell me if you've been able to figure out what the source of the gas smell is that the resident at the public meeting complained about? I've heard multiple people complain about intermittent gas smells over the last couple of years.

Sincerely,

Holly Dygert

### **PIP Recommendations for the Tidewater Site March 6, 2013**

#### **Issues of concern that people would like to be addressed at the poster session:**

Gas Smells – What is this? What are potential impacts?

Differences among remedial alternatives – what options does National Grid have and why are they choosing one option over another?

What are potential future uses of this land/site after remediation? Will National Grid still own the site? Have there been discussions with City of Pawtucket?

What are the implications for neighbors' health based on what kinds of contaminants are at the site?

#### **Further Suggestions for Effectively Communicating with the Public (in preparation for the poster session):**

National Grid should develop separate communication materials for schools – and provide enough copies to give place one in each student's backpack.

School principals want to review all of the fliers/documents that will be sent to parents before NG makes copies, translates, or finalizes the communication, to make sure they communicate effectively. Julie Nora (ICS) and Carolyn Sheehan (Blackstone Valley) made this suggestion.

Neighbors also want to review materials before NG sends out communications to neighborhood – point person can be Amelia Rose at EJ League who can send out draft to list of neighbors and collate comments/suggestions within one week and send back to NG for finalization (worry is that the communications are too wordy and will not be read).

Hold regular meetings with a core group of residents and school personnel to give NG/GZA a chance to communicate in a smaller group setting – in addition to the larger public meetings that happen less frequently. This will help increase communication with the most committed/involved residents and school officials who will be ambassadors to other residents and the wider school community to generate their interest and involvement. Also will make larger public meetings less adversarial and more productive because it won't be the first time people are hearing about a certain issue or proposal.

Translation at larger public meetings should be made available regardless of whether someone contacts NG to say they are coming to a meeting – this would help build trust with the neighborhood and principals could guarantee to parents that interpretation would be available at public meetings no matter what.

Community members recommend that they be permitted to have their own poster/table at the poster session in addition to what NG/GZA are preparing.

NG should create bookmarks with all relevant contact information as well as instructions for how people can get on the email/phone notification lists. These will be helpful to hand out in the neighborhood and at the schools and would be more likely to be read and communicate effectively – rather than a long letter.

Re: Response to Public Comments  
Draft Public Involvement Plan  
Former Tidewater MGP and Power Plant Site  
Pawtucket, Rhode Island  
*RIDEM Case No. 95-022*

Dear Mr. Martella:

On behalf of our client, The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) has prepared this letter in response to written public comments to the November 26, 2012 draft Public Involvement Plan (PIP) prepared for the Former Tidewater Manufactured Gas Plant (MGP) and Power Plant Site located in Pawtucket, Rhode Island (the Site). These comments were provided to National Grid by the Rhode Island Department of Environmental Management (RIDEM) via a February 21, 2013 notification letter. As indicated in RIDEM's February 21, 2013 notification letter, RIDEM received the following written public comments to the draft PIP: 1) a letter dated January 28, 2013, from Ms. Holly Dygert; and 2) a letter dated February 12, 2013, from Ms. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI). For your convenience, the comments received are repeated below followed by National Grid's responses in *italics*. The RIDEM notification letter along with the two public comment letters is included as an attachment to this letter.

In addition, per RIDEM's February 2013 notification, attached to this letter are responses to public comments that we received during the January 29, 2013, public meeting held at the Francis Varieur Elementary School. These responses were submitted separately to RIDEM on February 15, 2013. This letter also includes updates to responses to audience comments from the January 29, 2013, meeting which were summarized in the February 15, 2013, submittal and responses to questions related to the PIP provided in an email dated March 6, 2013, from Ms. Holly Dygert. A copy of this March 6, 2013 email is also attached.

**January 28, 2013 Letter**

1. Comment: The information in the boards should be provided in the three primary languages of the community, which are English, Spanish and Portuguese. I was concerned that National Grid seemed to reject a request made during the interviews for information to be translated into both Spanish and Portuguese. I want to underscore the importance of providing information in the community's languages.

*Response: Going forward, National Grid will provide the following documents in English, Spanish and Portuguese: 1) Notification Mailings, 2) Fact Sheets and 3) Executive Summaries that will accompany future reports.*

2. Comment: I look forward to the incorporation of the color-coded alert system.

*Response: We implemented the color-coded alert system on the bulletin boards during the recent substation upgrade project. The system involves posting different color sheets to indicate when excavation is active (yellow sheet) and not active (blue sheet).*

3. Comment: I am very pleased that National Grid has proposed to create a color-coded map of Tidewater site hazards to the public as part of the PIP. Despite years of communications about the hazards on the site, the members of the stakeholder group are still unclear about concentrations of particular hazards, and where they are located. Thus, I am eager to see this map.

*Response: We are finalizing the color-coded map for the Tidewater project that illustrates areas of the Site where impacts have been identified in groundwater and soils and we will present it at the upcoming Community Information Session. The final map will also be posted on the National Grid website and the bulletin boards.*

4. Comment: In regards to the first concern, I agree with the characterization of a public involvement process laid out on page 1 of the Draft PIP, as “an agreement between the party conducting response actions and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the site.” This definition identifies the public as important partner in the remediation process. Since the public’s interests vis-à-vis the remediation process diverge in important ways from those of the property owner, the public must have the ability to shape the remediation, and the precautions that are taken during the remediation process. I am concerned, however, that the Draft PIP construes public participation narrowly, as informing the public about work plans that have already been developed.

For example, on page 8, in describing the process through which a final remediation plan for the site will be determined, the Draft PIP states that RIDEM will issue a Program Letter when it has concluded that “the site has been adequately assessed” in the Site Investigation Report. The Draft PIP continues that “Following receipt of the Program Letter, National Grid will notify [various parties]... that the investigation is complete and that RIDEM has concurred with the recommended remedial alternative... Subsequent to this public notification and following receipt of any public comments, the Department will issue a Remedial Decision Letter formally approving the SIR.” In this description, the identification and approval of a remedial strategy are depicted as occurring apart from public involvement. This negates the role of the public in the decision-making process. Moreover, I believe that it is a mischaracterization of the process through which remediation strategies are determined. It is my understanding that the Program Letter solely certifies that RIDEM has determined that the proposed remedy meets the criteria for an acceptable remedy. I understand that the final determination of a remedy cannot be made until members of the community are given an opportunity to consider the proposal, and to convey their concerns to RIDEM.

The characterization of the process through which a Remedial Action Work Plan (RAWP) is identified and selected in the Draft PIP similarly neglects the role of the public. Though the text states that “Many of the above remedial process steps will be accompanied by public meetings and comment periods” (p.8), I find it disconcerting that the public’s role in shaping the remediation process is not included in National Grid’s description of the decision-making process. This view of public involvement as a process whereby National Grid officials inform the public about the remediation process carries through to other sections of the Draft PIP. For example, in the section on Community Meetings, meetings are depicted as opportunities for National Grid representatives to inform community members about the work that has been and will be undertaken in the site. Though informing the community is crucial for facilitating their

involvement in the process, it is not sufficient. The document also states that meetings will be held “in conjunction with... Departmental approval of the Remedial Action Work Plan; [and]prior to remedy implementation” (p.14). This neglects the crucial role the public will have in shaping the RAWP.

The PIP should be revised to indicate clearly that potential work plans will be presented in community meetings, and that community concerns will be solicited to ensure that the final work plans reflect the concerns and needs of the public. Opportunities for community members to comment on the proposed plans and thereby shape the remediation process should be clearly laid out in the meeting agendas, and in the scheduling of meetings (in relation to RIDEM’s final decisions about work at the site).

*Response: We are committed to providing the community with opportunities to review and comment on National Grid’s plans to remediate the Tidewater Site. National Grid will revise the PIP to include a public meeting related to the draft Remedial Action Work Plan (RAWP – the document that will be submitted to RIDEM to present the details of how the remedy will be implemented) to provide further opportunity for the public to comment on the Site remediation process. The public meeting regarding the draft RAWP will be held within 12 months of receipt of the Remedial Decision Letter (RDL – letter issued by RIDEM to formally agree with the findings of the Site Investigation Report). This meeting will be held prior to the submittal of the final RAWP to RIDEM and will provide the public an opportunity to provide comment on the remedial strategy for the Tidewater Site. The process going forward and as outlined in the PIP is intended to provide a means of effective “two-way communication” between the public and National Grid. The Initial Community Meeting (which will follow RIDEM’s review of the Site Investigation Report) will provide the public an opportunity to provide comment on the conceptual remedial strategy for the Tidewater Site. The process outlined in the PIP, which follows the requirements of the Remediation Regulations, provides the public opportunity to comment on the remedial process; however, it is noted that RIDEM is ultimately responsible for the final remedial analysis and decisions on the final remedial strategy for the Site.*

5. Comment: In regards to my second concern, one of the requests most of the interviewees made was for National Grid to make data from air monitoring available in real time to the community. While meeting with representatives from National Grid and RIDEM during the early Fall of 2012, we learned that this was not possible with the particular hand held devices being used to monitor emissions during the current electrical substation upgrade. Moreover, RIDEM representatives at the meeting seemed to concur that the small-scale nature of the work and the limited extent of contaminants in the soil did not warrant the more costly kind of air monitoring technologies that enable real-time posting of readings. I am very concerned to see that the particular scheme we agreed to for monitoring emissions and making the results available to community members during the substation upgrade is replicated in the Draft PIP. National Grid and GZA officials should be clear that the substation upgrade was classified as separate from the remediation process, which is why the work could be completed without presenting it to the public. As we look ahead to the full remediation, the particular air monitoring strategies, and techniques for communicating information about the results of that monitoring to the community, will need to be determined in conversation with the community about the particular threats posed by particular actions.

*Response: We will revise the PIP to delete the reference to posting weekly air monitoring data. Air monitoring plans for full-scale remediation of the Tidewater Site have not been developed as the final remedy for the project has not been approved by the RIDEM. The public will have an opportunity to comment and engage in a conversation about the proposed air monitoring program during the RAWP comment process described above.*

**February 12, 2013 Letter**

1. Comment: Page 2 – The draft PIP states: “This plan is not intended to cover Site activities relative to day-to-day operations of the natural gas regulating facility and electrical substation or other uses of the property by National Grid.” Since community members and parents from nearby schools have already met with GZA, RIDEM, and National Grid regarding substation upgrades and earthwork, especially with regard to improving air monitoring plans in relation to this work, which falls outside the official remediation plan, I would ask that this sentence be clarified to ensure that residents can expect to be informed and be invited to actively participate in the shaping of any plans for the site that would require disturbance to soil or otherwise create a potential public health risk. Some of these activities could be interpreted, potentially, as “day-to-day operations”, and therefore this statement should be clarified to clearly differentiate between actual day-to-day operations and other operations that are not specifically included in the remediation but will disturb soil, create potential emissions, etc.

*Response: National Grid will revise the PIP to clarify this sentence as follows: “This plan is not intended to cover Site activities relative to the day-to-day operations, including repair and maintenance of the natural gas regulating facility and electrical substation involving minor soil disturbances (i.e., fence post installation) or other uses of the property by National Grid. Activities at these facilities involving excavations of soils with the potential to create volatile emissions are covered by this PIP. In the event of a facilities emergency requiring immediate soil excavation (utility repair, etc.), National Grid will follow the soil management procedures prepared for the previous natural gas station regulator and electrical substation work (i.e., April 2011 Materials Management Plan and November 2012 Soil Management Plan, respectively). In addition, air monitoring will be completed during these emergency events in accordance with the September 28, 2012, air monitoring summary memorandum submitted to RIDEM to the extent practical.”*

2. Comment: Page 17 – The Pawtucket Public Library will serve as a repository for all of the documents and other information related to the site. I suggest posting a sign or poster at the Library itself (not just on the fence at the Tidewater site) to let the general public know that this repository exists.

*Response: Information about public repositories for the Tidewater project is posted on the bulletin boards at the end of Tidewater Street and Bowles Court. National Grid will contact the Pawtucket Public Library to inquire about the possibility of posting a sign at the Library and will do so with the Library’s permission.*

3. Comment: Page 19 – If there are revisions proposed for the PIP in the future, National Grid will prepare a revised draft for review and approval by the public and RIDEM. National Grid should prepare a summary sheet to list all of the proposed changes/revisions, as well as the final approved revisions, not simply post the proposed revised draft of the full PIP online and in the physical repository (even if the changes/revisions are highlighted in the full document). This summary sheet should be a separate document to make it easy for the public to access, read, and digest the proposed, and then approved, changes.

*Response: While future revisions to the PIP will not re-open the draft and public comment period, we will prepare and make available summary sheets of proposed and approved changes/revisions for the public.*

4. Comment: In response to concerns raised by residents living on Thornton Street, immediately adjacent to the site, regarding natural gas odors and the possibility of air impacts from the groundwater contamination, I suggest addressing these issues at the poster session National Grid is hosting in the near future. In particular, addressing the issue of vapor intrusion into homes and schools should be a top priority. EJLRI receives technical assistance through an EPA program that

assists organizations and community residents in understanding technical information related to Brownfields contamination and remediation. Upon her review of the draft remedial plan submitted to RIDEM by National Grid, our consultant from the New Jersey Institute of Technology recommended the following:

#### VAPOR INTRUSION INVESTIGATION

Some of the chemicals (volatile compounds) identified at the site have the potential to travel through the soil as vapors. These vapors may then move up through the soil into nearby buildings, contaminating indoor air. Therefore, if a vapor intrusion investigation has not been completed, a vapor intrusion investigation is recommended to determine whether the occupants of neighboring buildings are at risk for exposure to VOCs due to vapor intrusion.

We will be submitting a final version of the consultant's review at the appropriate time (when public comments are being accepted on the SIR/recommended remedial alternative), but I wanted to share this recommendation because it speaks directly to concerns raised by residents at the last meeting.

*Response: We understand that nearby neighbors are concerned about vapor intrusion. Based on a number of factors – the way groundwater is distributed and moves at the Site, the way contaminants are distributed at the Site, and the distance from off-Site buildings to the nearest Site impacts- the potential for vapor intrusion into off-Site buildings, including the residences on Thornton Street or the neighboring schools, has not been identified as a potential pathway of concern for the Tidewater Site. We say this for several reasons:*

- *The majority of soil and groundwater impacts are located at least 50 feet away from the nearest Thornton Street residences and the schools.*
- *The portion of the Site that is nearest the residences along Thornton Street is an area where historical operations did not occur and significant impacts (VOCs or others) have not been detected in this area.*
- *In addition to the distance from Site impacts, the residences along Thornton Street and all three of the schools are located hydraulically upgradient of the Site – in other words, groundwater from the Site flows “downhill” towards the river, not towards the homes on Thornton Street or the schools. Therefore, the potential for migration of Site impacts towards Thornton Street and the schools is not a concern.*

*Our conclusion is also supported by:*

- *The March 2003 proposed revisions to the Connecticut Department of Environmental Protection (CTDEP) volatilization criteria, which references vapor intrusion guidance documents prepared by US Environmental Protection Agency (EPA).<sup>1</sup> This guidance indicates that volatilization criteria are applicable to impacts within 30 feet (both depth and lateral distance) from a structure.*
- *RIDEM's guidance document entitled “Evaluation of Vapor Intrusion Potential for Proposed RI School Sites,” dated September 2012.<sup>2</sup> This RIDEM guidance document outlines a step-by-step process for evaluating the potential for vapor intrusion to migrate*

---

<sup>1</sup> RIDEM has not yet developed any vapor intrusion criteria and therefore has incorporated the State of Connecticut's volatilization criteria, available here:

[http://www.ct.gov/deep/cwp/view.asp?a=2715&q=458652&deepNav\\_GID=1626](http://www.ct.gov/deep/cwp/view.asp?a=2715&q=458652&deepNav_GID=1626)

<sup>2</sup> RIDEM developed this guidance document in September 2012, available here:

<http://www.dem.ri.gov/programs/benviron/waste/pdf/skulvapr.pdf>

*from the subsurface into an existing or proposed building to be used as a school. Using this guidance document and the understanding of subsurface impacts and groundwater flow direction information, an evaluation for the potential for vapor intrusion into the off-Site schools and residences is not considered warranted.*

*Finally, National Grid's predecessor owners conducted a soil gas survey surrounding the Francis J. Varieur School in 1996. The survey consisted of 28 sampling points adjacent to the school to ascertain whether the potential existed for the migration of vapors from the surrounding soils into the school. No VOCs were detected in the samples, with the exception of two soil gas samples which detected low levels of trichloroethylene (TCE). TCE is not a contaminant associated with historic MGP and power plant operations and is not associated with the Tidewater Site. Subsequent indoor air samples were collected from within the school for TCE analysis. Those samples did not detect any TCE.*

*At this time, National Grid does not plan on having a specific poster board regarding vapor intrusion at the community outreach session. However, we will be willing to discuss the issue should anyone have any questions about vapors. In addition, we would be happy to discuss this issue further with representatives of the New Jersey Institute of Technology (NJIT) if you wish.*

*To address the question regarding natural gas odors in the neighborhood, National Grid will have a representative available from gas operations at the Community Outreach Session to discuss the natural gas odor concerns raised by the community.*

*Natural gas is typically "odorless" from the well head. Federal and State law mandates that gas must be detectable by a person with an average sense of smell. As a result, pipeline operators and in some cases distribution system operators inject a malodorous material called mercaptan, commonly referred to as "odorant". Federal law also mandates that odorant added to a pipeline must not be harmful to people, pipe or other devices. National Grid does has several Level 3 gas leaks (defined as a non-hazardous leak; periodic monitoring required) in the neighborhood. Level 3 leaks do not present a risk to public health or safety. National Grid is continuing to monitor the leaks and is adhering to the strict Federal and State standards.*

5. Comment: The draft PIP is strong overall, but lacks specifics on how to best engage parents at the local schools. Principals at the schools may not be the best, or only, individuals to notify regarding upcoming work, air monitoring results, public meeting notices, etc. In fact, they can be bottlenecks for getting information out to the wider school community. Suggestions raised at the meeting to engage the Pawtucket Schools Superintendent, the school committee, etc. are all very good, but also are not enough to get through to individual parents. Signs or posters with general information posted at the front offices of the schools adjacent to the site would be a good start (and/or at student pick-up locations), as well as providing copies of public notices to all parents via their child's backpacks, as suggested by the principal at Varieur Elementary, would also help ameliorate this problem. Not all notices need to be sent home via backpacks, but any public meeting announcements should be, as should an initial introductory letter or handout with an overview of the site history and current status, including who to contact for more information. National Grid should work with the principals at the three schools to send this introductory info sheet/letter home with all students as soon as possible.

*Response: We provide notifications to those on the mailing/email list, which includes the principals of the neighboring schools. If the principals need assistance in distributing these notifications, we would be happy to help. The best way to find out information currently is to sign-up to the Tidewater mailing/email list via the National Grid website. National Grid encourages all parents/community members to sign up so that they can receive information directly from National Grid. Any interested party is also welcome to contact National Grid's Project Manager, Michele Leone, directly at 781-907-3651.*

*With permission of the neighboring schools, National Grid will post a sign on how to obtain information regarding the Site at the front office of each school. National Grid has prepared an updated fact sheet which was distributed on March 4, 2013, through the mailing and email lists, as well as via door-to-door flyers to the neighboring community. This fact sheet included information about the former Tidewater facility, recent activities at the Site, public involvement activities and next steps for the Site. The fact sheet accompanied a notification letter regarding the date, time and place of the upcoming Community Outreach Session. National Grid distributed this notification package to the schools on March 6, 2013, to be sent home with the students via backpacks. National Grid will continue to work with the principals about sending mailing list items (flyers, fact sheets and public notifications) in multiple languages home with the students via backpacks.*

6. Comment: Lastly, I would like to ask National Grid, GZA, and RIDEM to respond to how phytoremediation might play into the overall remediation strategy for this site, and/or if this approach has been discussed at all in relation to the Tidewater Site.

*Response: We considered phytoremediation but concluded that it is not a feasible remedial alternative for the following reasons:*

- *The depth of the treatment zone is limited by the depth of the root material of the plants.*
- *The contaminants at the former Tidewater facility are located at depth greater than two feet below the ground which is too deep for phytoremediation.*
- *The nature of certain impacts at the Tidewater Site, including separate phase product (in other words, coal tar or oils), are not amenable to treatment via phytoremediation. Due to these limitations, phytoremediation is not deemed appropriate as a potential remedial alternative for the former Tidewater facility.*

**Updates to Responses to Comments from the January 29, 2013 Public Meeting**  
**Open Comments and Questions Received:**

9. Audience member requested that technical documents be translated into “everyone speak” language.

*National Grid will continue to make every effort to use brief and nontechnical terminology in communications with members of the public. In an effort to meet this request, National Grid has hired a communications consultant to assist in the preparation of documents.*

12. Audience member spoke about historical mercury spill and lasting impact on concern from neighborhood. Audience member enquired about money from court settlement and publicly available information regarding mercury spill. He requested that information about the mercury spill, as it pertains to the history of the Tidewater Site, be included on the website and presented during the poster board session.

*National Grid did not own the property when the mercury spill took place in 2004 and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid purchased the property from Southern Union but did not acquire Southern Union’s liability for the mercury issues on the property. The mercury contamination from the 2004 spill has been cleaned up and removed from the property. In addition, the buildings have been checked for mercury and no mercury is currently stored on the property. National Grid stated that the files associated with the mercury spill are public information and can be reviewed through RIDEM.*

The audience member further requested that information on the mercury spill be posted on the National Grid website.

*National Grid explained that it was not liable for the mercury release and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid indicated that it would consider the request and provide a formal response in the response to comments on the PIP.*

*The following additional response was prepared by RIDEM and provided to National Grid following the January 2013 public meeting. National Grid was not involved in preparation of this response or involvement in the Southern Union Case.*

*“In June 2012, the U.S. Supreme Court remanded an \$18-million sentence against the owners of New England Gas in a case that stemmed from the 2004 mercury spill at a Pawtucket housing project. The ruling puts at question the \$12 million in damages that were to have gone to Rhode Island environmental groups (the majority of which were to be managed by the Rhode Island Foundation, in order to fund grants in environmental education, remediation, conservation, and children's health). The remaining \$6 million was a fine. The Supreme Court case hinged on circumstances that require juries -- not judges -- to set penalties after criminal convictions, so the ruling does not change the 2008 conviction of Texas-based Southern Union Co. for illegal storage of the hazardous material that belonged to a former subsidiary. But the ruling means the Supreme Court remanded the case for further proceedings in US District Court (RI) consistent with this opinion. The June 2012 Supreme Court Decision can be found at <http://www.supremecourt.gov/opinions/11pdf/11-94a1b2.pdf> . The US District Court heard oral arguments in December 2012 in an attempt to determine how to properly proceed with the case from here. DEM has received no additional information on this matter from the Court since the hearing in December 2012. “ – Communications from RIDEM*

14. Audience member commented on gas smell at Thornton and Merry Streets and whether or not they are safe or being exposed to natural gas (or its additives).

*The odor that the audience member says he smelled is likely associated with mercaptan. Natural gas by itself is odorless. Mercaptan is an odorant that is added to natural gas so the gas can easily be detected. It is carried with the natural gas stream.*

*National Grid will contact its Natural Gas Division to find out more information about this concern. Representatives from National Grid will be available during the March 27, 2013 community outreach meeting to discuss public concerns regarding the natural gas operations at the Tidewater facility.*

*In addition, refer to the response above for Comment 4 of the February 12, 2013 comment letter regarding “natural gas odors.”*

15. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI) introduced herself and her agency to the audience. She indicated that EJLRI had access to funds from the US Environmental Protection Agency (USEPA) and could be used as a resource to the community. She also suggested that National Grid have a poster board regarding vapor intrusion during the Community Informational Session to educate the public.

*Refer to the response above for Comment 4 of the February 12, 2013 comment letter regarding “vapor intrusion investigation.”*

*RIDEM also added that the potential for volatilization of contaminants from the Site is not supported by the results of the recent air monitoring program (hand held field instruments) which is being followed as part of the electrical substation project.*

17. Audience member suggested that Cape Verdean be added as a language to the translation list. Also suggested that Oak Hill Nursing Home be added to the distribution list.

*National Grid understands that Cape Verdean is a dialect of Portuguese. Based on discussions with a translation service, we also understand that documents translated in Portuguese should be understood by people who speak Cape Verdean. Therefore, National Grid does not plan to provide documents in Cape Verdean. If a community member requires assistance or translation other than Spanish and Portuguese, please contact Michele Leone at National Grid.*

*National Grid has added Oak Hill Nursing Home to the door to door flyer distribution list during the March 4, 2013 mailing.*

### **March 6, 2013 Email**

(1) National Grid should develop separate communication materials for schools – and provide enough copies to give place one in each student’s backpack.

*National Grid will continue to work with the principals to get materials out to parents via backpacks. To avoid confusion in disseminating this information, National Grid will work directly with the principals and other stakeholders.*

(2) School principals want to review all of the fliers/documents that will be sent to parents before NG makes copies, translates, or finalizes the communication, to make sure they communicate effectively. Julie Nora (ICS) and Carolyn Sheehan (Blackstone Valley) made this suggestion.

*National Grid will work with the principals to ensure that they are comfortable with the documents we provide to them for distribution.*

(3) Neighbors also want to review materials before NG sends out communications to neighborhood – point person can be Amelia Rose at EJ League who can send out draft to list of neighbors and collate comments/suggestions within one week and send back to NG for finalization (worry is that the communications are too wordy and will not be read).

*National Grid is working with a communications consultant in order to make mailings more easily understood by the community in response to this concern. Given this, National Grid will not be providing drafts of our communications to the neighbors prior to distribution. We continue to appreciate the community’s input on the communications and welcome suggestions on how to further improve this process.*

(4) Hold regular meetings with a core group of residents and school personnel to give NG/GZA a chance to communicate in a smaller group setting – in addition to the larger public meetings that happen less frequently. This will help increase communication with the most committed/involved residents and school officials who will be ambassadors to other residents and the wider school community to generate their interest and involvement. Also will make larger public meetings less adversarial and more productive because it won’t be the first time people are hearing about a certain issue or proposal.

*National Grid designed the public involvement plan (PIP) to involve all community members and interested parties. National Grid believes that the large number of public meetings and the commitment to schedule additional meetings on an as-needed basis pre-empts the need for smaller, stakeholder meetings. Community members are strongly encouraged to contact Michele Leone at any time throughout the site cleanup process by calling 781-907-3651 or via email at [michele.leone@nationalgrid.com](mailto:michele.leone@nationalgrid.com) should they have questions or comments.*

(5) Translation at larger public meetings should be made available regardless of whether someone contacts NG to say they are coming to a meeting – this would help build trust with the neighborhood and principals could guarantee to parents that interpretation would be available at public meetings no matter what.

*At all public meetings, translation assistance will be provided for non-English speaking individuals, upon request. Requests can be made to Michele Leone by calling 781-907-3651 or via email at michele.leone@nationalgrid.com.*

(7) NG should create bookmarks with all relevant contact information as well as instructions for how people can get on the email/phone notification lists. These will be helpful to hand out in the neighborhood and at the schools and would be more likely to be read and communicate effectively – rather than a long letter.

*National Grid has created magnets with the requested information which will be available at the upcoming community information session.*

A bulleted summary of the proposed revisions to the PIP, as discussed above, is attached to this letter.

Should you have any questions or comments regarding the information presented herein, please do not hesitate to contact the undersigned or Michele Leone at 781-907-3651.

Very truly yours,

Summary of Proposed Revisions to PIP

CC: Ms. Michele Leone, National Grid  
Ms. Elizabeth Stone, RIDEM

**FEBRUARY 21, 2013**

NOTIFICATION OF PUBLIC COMMENTS RECEIVED

February 21, 2013

Ms. Michele V. Leone  
Manager, New England Site Investigation & Remediation  
National Grid  
40 Sylvan Road  
Waltham, MA 02451-1120

RE: Tidewater Manufactured Gas Plant (former)  
Tidewater Street  
Pawtucket, Rhode Island

Dear Ms. Leone:

On November 9, 2011, the Rhode Island Department of Environmental Management (the Department) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases, (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in an efficient manner.

In the matter of the above referenced "Site" (as defined in the Industrial Property Remediation and Reuse Act), and in accordance with Rule 7.07.E (Public Involvement Plans) of the 2011 Remediation Regulations, the Department's Office of Waste Management (OWM) has received the following documents concerning public comments on the draft Public Involvement Plan (PIP):

1. Letter from Holly Dygert to the Department, Re: Tidewater Site Public Involvement Plan, dated January 27, 2013, and received via e-mail on January 28, 2013; and
2. Comments re: Draft Public Involvement Plan, Former Tidewater Facility and Former Power Plant, Tidewater and Merry Streets, Pawtucket, Rhode Island, prepared by the Environmental Justice League of Rhode Island (EJLRI), received via e-mail on February 12, 2013.

In addition, National Grid received several comments at the public meeting for the draft PIP held on January 29, 2013.

Please review these submitted comments along with those received at the public meeting and prepare written responses to each of them as appropriate. A completed document, incorporating responses all of the comments, must be submitted to the Department for review and approval.

**All correspondence regarding this Site should be sent to the attention of:**

Joseph T. Martella II – Senior Engineer  
RIDEM / Office of Waste Management

Mr. Joseph Martella II, Senior Engineer  
RIDEM Office of Waste Management  
Site Remediation Program

Re: Tidewater Site Public Involvement Plan

Dear Mr. Martella,

I am very pleased that RIDEM has implemented a public involvement mechanism to ensure that members of the community who may be exposed to hazards are involved in the remediation process. I reviewed National Grid's draft Public Involvement Plan (PIP) for the Tidewater Site, and I am also very pleased with many of the actions National Grid has proposed to take to ensure that those potentially impacted by the work at Tidewater are informed of the work. I am writing to communicate my suggestions for strengthening the proposed PIP. These suggestions are aimed, first, to optimize the ability of those who could be impacted by the site's hazards to access information about the nature of these hazards and about potential routes of exposure, and, second, to ensure that they are able to influence the process in accordance with their particular concerns.

I appreciate that National Grid solicited comments from the community through the interview process in June of 2012, and provided a synthesis of the suggestions in the *Draft PIP*. National Grid has already acted on many of these suggestions, and has integrated many of them into the proposed PIP. The community bulletin boards – with announcements and the results of weekly air monitoring – are very useful communication tools. I look forward to the incorporation of the color-coded alert system. The information in the boards should be provided in the three primary languages of the community, which are English, Spanish and Portuguese. I was concerned that National Grid seemed to reject a request made during the interviews for information to be translated into both Spanish and Portuguese. I want to underscore the importance of providing information in the community's languages.

I am very pleased that National Grid has proposed to create a color-coded map of Tidewater site hazards to the public as part of the PIP. Despite years of communications about the hazards on the site, the members of the stakeholder group are still unclear about concentrations of particular hazards, and where they are located. Thus, I am eager to see this map. I am also pleased that National Grid is proposing a Community Outreach (poster) Session, and possibly a tour of the site.

While I am generally satisfied with the strategies National Grid has proposed to convey information to the public, I have two main concerns. The first is that the *Draft PIP* largely neglects the public's role in shaping the remediation process. The second is that the particular

strategy for monitoring air quality that was agreed on for the electrical substation upgrade is included in the *Draft PIP* as the plan for the remediation.

In regards to the first concern, I agree with the characterization of a public involvement process laid out on page 1 of the *Draft PIP*, as “an agreement between the party conducting response actions and the public about how they will share information moving forward, and how the public will be able to comment on plans for assessment and cleanup of the site.” This definition identifies the public as important partner in the remediation process. Since the public’s interests vis-à-vis the remediation process diverge in important ways from those of the property owner, the public must have the ability to shape the remediation, and the precautions that are taken during the remediation process. I am concerned, however, that the *Draft PIP* construes public participation narrowly, as informing the public about work plans that have already been developed.

For example, on page 8, in describing the process through which a final remediation plan for the site will be determined, the *Draft PIP* states that RIDEM will issue a Program Letter when it has concluded that “the site has been adequately assessed” in the Site Investigation Report. The *Draft PIP* continues that “Following receipt of the Program Letter, National Grid will notify [various parties]... that the investigation is complete and that **RIDEM has concurred with the recommended remedial alternative**... Subsequent to this public notification and following receipt of any public comments, the Department will issue a Remedial Decision Letter formally approving the SIR.” In this description, the identification and approval of a remedial strategy are depicted as occurring apart from public involvement. This negates the role of the public in the decision-making process. Moreover, I believe that it is a mischaracterization of the process through which remediation strategies are determined. It is my understanding that the Program Letter solely certifies that RIDEM has determined that the proposed remedy meets the criteria for an acceptable remedy. I understand that the final determination of a remedy cannot be made until members of the community are given an opportunity to consider the proposal, and to convey their concerns to RIDEM.

The characterization of the process through which a *Remedial Action Work Plan* (RAWP) is identified and selected in the *Draft PIP* similarly neglects the role of the public. Though the text states that “Many of the above remedial process steps will be accompanied by public meetings and comment periods” (p.8), I find it disconcerting that the public’s role in shaping the remediation process is not included in National Grid’s description of the decision-making process. This view of public involvement as a process whereby National Grid officials inform the public about the remediation process carries through to other sections of the *Draft PIP*. For example, in the section on Community Meetings, meetings are depicted as opportunities for National Grid representatives to inform community members about the work that has been and will be undertaken in the site. Though informing the community is crucial for facilitating their involvement in the process, it is not sufficient. The document also states that meetings will be held “in conjunction with... Departmental approval of the *Remedial Action Work Plan*; [and]

prior to remedy implementation” (p.14). This neglects the crucial role the public will have in shaping the RAWP.

The *PIP* should be revised to indicate clearly that potential work plans will be presented in community meetings, and that community concerns will be solicited to ensure that the final work plans reflect the concerns and needs of the public. Opportunities for community members to comment on the proposed plans and thereby shape the remediation process should be clearly laid out in the meeting agendas, and in the scheduling of meetings (in relation to RIDEM’s final decisions about work at the site).

In regards to my second concern, one of the requests most of the interviewees made was for National Grid to make data from air monitoring available in real time to the community. While meeting with representatives from National Grid and RIDEM during the early Fall of 2012, we learned that this was not possible with the particular hand held devices being used to monitor emissions during the current electrical substation upgrade. Moreover, RIDEM representatives at the meeting seemed to concur that the small-scale nature of the work and the limited extent of contaminants in the soil did not warrant the more costly kind of air monitoring technologies that enable real-time posting of readings. I am very concerned to see that the particular scheme we agreed to for monitoring emissions and making the results available to community members during the substation upgrade is replicated in the *Draft PIP*. National Grid and GZA officials should be clear that the substation upgrade was classified as separate from the remediation process, which is why the work could be completed without presenting it to the public. As we look ahead to the full remediation, the particular air monitoring strategies, and techniques for communicating information about the results of that monitoring to the community, will need to be determined in conversation with the community about the particular threats posed by particular actions.

In closing, I want to reiterate my support for the PIP process that RIDEM has adopted, and that National Grid has begun to develop. I look forward to continuing to work with RIDEM and National Grid to develop an effective plan for ensuring optimal public involvement.

Sincerely,

Holly Dygert

*Comments re: Draft Public Involvement Plan, Former Tidewater Facility and Former Power Plant, Tidewater and Merry Streets, Pawtucket, Rhode Island*

Dear Mr. Martella,

I am submitting the following comments on behalf of the Environmental Justice League of Rhode Island (EJLRI) regarding the draft Public Involvement Plan (PIP) prepared by GZA on behalf of their client, National Grid, the responsible party for the Tidewater Site.

I have listed a few specific comments first, followed by more general suggestions for the PIP overall.

Page 2 – The draft PIP states: “This plan is not intended to cover Site activities relative to day-to-day operations of the natural gas regulating facility and electrical substation or other uses of the property by National Grid.” Since community members and parents from nearby schools have already met with GZA, RIDEM, and National Grid regarding substation upgrades and earthwork, especially with regard to improving air monitoring plans in relation to this work, which falls outside the official remediation plan, I would ask that this sentence be clarified to ensure that residents can expect to be informed and be invited to actively participate in the shaping of any plans for the site that would require disturbance to soil or otherwise create a potential public health risk. Some of these activities could be interpreted, potentially, as “day-to-day operations”, and therefore this statement should be clarified to clearly differentiate between actual day-to-day operations and other operations that are not specifically included in the remediation but will disturb soil, create potential emissions, etc.

Page 17 – The Pawtucket Public Library will serve as a repository for all of the documents and other information related to the site. I suggest posting a sign or poster at the Library itself (not just on the fence at the Tidewater site) to let the general public know that this repository exists.

Page 19 – If there are revisions proposed for the PIP in the future, National Grid will prepare a revised draft for review and approval by the public and RIDEM. National Grid should prepare a summary sheet to list all of the proposed changes/revisions, as well as the final approved revisions, not simply post the proposed revised draft of the full PIP online and in the physical repository (even if the changes/revisions are highlighted in the full document). This summary sheet should be a separate document to make it easy for the public to access, read, and digest the proposed, and then approved, changes.

In response to concerns raised by residents living on Thornton Street, immediately adjacent to the site, regarding natural gas odors and the possibility of air impacts from the groundwater contamination, I suggest addressing these issues at the poster session National Grid is hosting in the near future. In particular, addressing the issue of vapor intrusion into homes and schools should be a top priority. EJLRI receives technical assistance through an EPA program that assists organizations and community residents in understanding technical information related to Brownfields contamination and remediation. Upon her review of the draft remedial plan submitted to RIDEM by National Grid, our consultant from the New Jersey Institute of Technology recommended the following:

#### VAPOR INTRUSION INVESTIGATION

Some of the chemicals (volatile compounds) identified at the site have the potential to travel through the soil as vapors. These vapors may then move up through the soil into nearby buildings, contaminating indoor air. Therefore, if a vapor intrusion investigation has not been completed, a vapor intrusion investigation is recommended to determine whether the occupants of neighboring buildings are at risk for exposure to VOCs due to vapor intrusion.

We will be submitting a final version of the consultant's review at the appropriate time (when public comments are being accepted on the SIR/recommended remedial alternative), but I wanted to share this recommendation because it speaks directly to concerns raised by residents at the last meeting.

The draft PIP is strong overall, but lacks specifics on how to best engage parents at the local schools. Principals at the schools may not be the best, or only, individuals to notify regarding upcoming work, air monitoring results, public meeting notices, etc. In fact, they can be bottlenecks for getting information out to the wider school community. Suggestions raised at the meeting to engage the Pawtucket Schools Superintendent, the school committee, etc. are all very good, but also are not enough to get through to individual parents. Signs or posters with general information posted at the front offices of the schools adjacent to the site would be a good start (and/or at student pick-up locations), as well as providing copies of public notices to all parents via their child's backpacks, as suggested by the principal at Varieur Elementary, would also help ameliorate this problem. Not all notices need to be sent home via backpacks, but any public meeting announcements should be, as should an initial introductory letter or handout with an overview of the site history and current status, including who to contact for more information. National Grid should work with the principals at the three schools to send this introductory info sheet/letter home with all students as soon as possible.

Lastly, I would like to ask National Grid, GZA, and RIDEM to respond to how phytoremediation might play into the overall remediation strategy for this site, and/or if this approach has been discussed at all in relation to the Tidewater Site.

Sincerely,

A handwritten signature in cursive script that reads "Amelia Rose". The signature is written in black ink and is positioned below the word "Sincerely,".

Amelia Rose, Director

Re: *Meeting Summary - January 29, 2013*  
Draft Public Involvement Plan  
Former Tidewater MGP and Power Plant Site  
Pawtucket, Rhode Island  
*RIDEM Case No. 95-022*

Dear Mr. Martella:

On behalf of our client, The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental Inc. (GZA) is pleased to provide the attached summary of the January 29, 2013 public meeting associated with the Former Tidewater Manufactured Gas Plant (MGP) and Power Plant Site located in Pawtucket, Rhode Island (the Site). The purpose of the public meeting was to discuss public comments to the draft Public Involvement Plan (PIP) which was submitted to the Department on November 26, 2012.

Should you have any questions or comments regarding the information presented herein, please do not hesitate to contact the undersigned or Michele Leone at 781-907-3651.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

A handwritten signature in blue ink, appearing to read "Margaret S. Kilpatrick".

Attachment: Summary of Meeting

CC: Ms. Michele Leone, National Grid  
Ms. Elizabeth Stone, RIDEM

Summary of Meeting  
 DRAFT Public Involvement Plan (PIP)  
 Former Tidewater Facility  
 Pawtucket, Rhode Island

January 29, 2013 6 PM  
 Francis J. Varieur Elementary School  
 486 Pleasant Street  
 Pawtucket, Rhode Island

- **Introduction to Meeting – Michele Leone (National Grid Representative)**
- **Presentation of DRAFT PIP dated November 26, 2012 – Elizabeth Stone (Rhode Island Department of Environmental Management or RIDEM) and Meg Kilpatrick, P.E. (GZA GeoEnvironmental, Inc.)**

The presentation included a summary of the Draft Public Involvement Plan (PIP) for the former Tidewater Facility (the Site). The draft PIP was developed based on input from the public provided during the community interviews completed in June 2012, as well as input from RIDEM. It provides a blueprint for keeping the public informed during the site cleanup process. It also presents how the public can participate in the process and comment on the project. A PIP is a living document and can be amended to reflect additional issues or challenges that may arise during the cleanup process.

National Grid submitted a draft PIP to RIDEM on November 26, 2012. The draft PIP has four components: 1) public notice, 2) fact sheets and enhanced communications, 3) community meetings and 4) information repositories. The four components are presented in the below table.

<p><b><u>Public Notice:</u></b></p> <ul style="list-style-type: none"> <li>• Mailing List (used to announce public meetings, distribute fact sheets, information about availability of reports, etc.)</li> <li>• Email List (optional)</li> <li>• Sign up at <a href="http://www.tidewatersite.com">www.tidewatersite.com</a></li> <li>• Or, send request to National Grid</li> </ul>	<p><b><u>Fact Sheets and Enhanced Communications:</u></b></p> <ul style="list-style-type: none"> <li>• Fact Sheets (used to inform of development of new information and/or achievement of significant milestones)</li> <li>• Informational Bulletin Boards (end of Tidewater Street and Bowles Court)</li> <li>• Phone Message Alert System during excavation</li> </ul>
<p><b><u>Community Meetings:</u></b></p> <ul style="list-style-type: none"> <li>• Encourages equal participation by all to create an atmosphere of constructive, open dialogue</li> <li>• Proposed Schedule and Objective of Public Meetings</li> <li>• Evening meeting time</li> <li>• Francis J. Varieur School (preferred venue)</li> </ul>	<p><b><u>Information Repositories:</u></b></p> <ul style="list-style-type: none"> <li>• Publicly Accessible Site File: RIDEM Case No. 95-022 <a href="http://www.dem.ri.gov/topics/filerevw/htm">www.dem.ri.gov/topics/filerevw/htm</a></li> <li>• Publicly Accessible Websites: <a href="http://www.tidewatersite.com">www.tidewatersite.com</a> <a href="http://www.dem.ri.gov/benviron/waste/tide/htm">www.dem.ri.gov/benviron/waste/tide/htm</a></li> <li>• Local Information Repository: Pawtucket Library (13 Summer St) Bulletin Boards: Tidewater St &amp; Bowles Ct</li> </ul>

Following the public comment period for the draft PIP, National Grid will provide a response to comments and revise the PIP as necessary for submittal to RIDEM for final review and approval.

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

National Grid will hold a community outreach session in March 2013 to present information about the Site in an informal poster-board type setting. Following this session, National Grid will hold the initial community meeting within 60 days after receipt of the Program Letter from RIDEM (issued following RIDEM’s formal review of the Site Investigation Report submitted by National Grid). The schedule of community meetings follows, and National Grid encourages participation by all to create an atmosphere of constructive, open dialogue.

ACTIVITY	TIME PERIOD
Community Outreach Session	Within 60 days of Draft PIP Meeting (March 2013)
Initial Community Meeting	Within 60 days of receipt of Program Letter – during SIR Public Comment Period
Public Meeting on DRAFT Remedial Action Approval Plan (RAWP)	Within 12 months of receipt of Remedial Decision Letter
Submit RAWP for RIDEM Approval	Within 6 months of DRAFT RAWP Meeting
Public Meeting prior to initiation of remedy	Minimum of 30 days prior to start of remediation
Public Meetings during remediation	Meeting schedule to be presented for discussion purposes once remedial schedule is developed and approved by RIDEM
Public Meeting upon completion of the remedy	Within 30 days following completion of remediation

A copy of the presentation associated with the January 29, 2013 Draft PIP meeting is posted on the National Grid Tidewater website ([www.tidewatersite.com](http://www.tidewatersite.com)).

**Questions and Comments Session:** *(Responses provided in italics)*

---

National Grid provided a brief summary of written public comments received to date on the DRAFT PIP.

- Public requested that Portuguese (in addition to Spanish) be included as languages for documents requiring translation.

*National Grid stated that going forward, the following document types will be provided in English, Spanish and Portuguese: 1) Notification Mailings, 2) Fact Sheets and 3) brief Executive Summaries which will accompany future reports.*

- Public requested that color-coded alert system be implemented on the bulletin boards.

*National Grid stated that the color-coded alert system has been implemented on the bulletin boards during the recent excavation project. The system involves posting different color sheets to indicate when excavation is active (yellow sheet) and not active (blue sheet).*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

- Public requested color-coded map of Tidewater Site contaminants.

*National Grid stated that the color-coded map for the Tidewater project is being finalized and will be presented at the upcoming Community Information Session. The final map will also be posted on the National Grid website and the bulletin boards.*

- Public expressed concern that current Draft PIP does not take into account the public's role in providing input into the remediation process.

*National Grid reinforced that the process going forward and as outlined in the PIP is intended to provide a means of effective "two-way communications" between the public and National Grid. National Grid stated that the Initial Community Meeting (which will follow RIDEM's review of the Site Investigation Report) will provide the public an opportunity to provide comment on the conceptual remedial strategy for the Tidewater Site. In addition, National Grid indicated that the current draft of the PIP has been modified to include a public meeting on the draft Remedial Action Work Plan (RAWP – the document that will be submitted to RIDEM to present the details of how the remedy will be implemented) to further provide an opportunity for the public to comment on the Site cleanup process.*

- Public expressed concern that current Draft PIP does not consider air monitoring during the remediation of the Tidewater Site.

*National Grid stated that the air monitoring plans for full-scale remediation of the Tidewater Site have not been developed as the final remedy for the project has not been approved. National Grid stated that the public will have an opportunity to comment and present their concerns during future public meetings, which National Grid will incorporate into the air monitoring plan for the final remediation.*

Audience member relayed concern that draft PIP references weekly posting of air monitoring data and that inclusion of this language will set a precedent for future air quality monitoring.

*National Grid stated that the PIP will be modified to delete reference to the posting of weekly air monitoring data.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

**Open Comments and Questions Received:**

1. Audience member enquired about date for the Community Outreach Session.

*The current schedule is to have the Community Outreach Session in mid to late March 2013.*

2. Audience member enquired about what March 2013 Community Outreach Session consist of.

*The Community Outreach Session will consist of an informal meeting where information will be presented on poster boards to the public. The poster boards will include a variety of topics, including such things as "What is an Manufactured Gas Plant?" history of the Tidewater Site, findings of the investigations, demonstrations of field equipment, description of current National Grid operations at the property, etc. Each poster board will be manned by a representative from National Grid and/or GZA to answer questions. RIDEM will also be present to answer questions from the public.*

3. Audience member expressed concern about when to know when things are going on at the Site; specifically, when to leave kids inside.

*Information regarding excavation at the Site is provided through the mailing/email list, posted to the bulletin boards and posted to the Tidewater websites. The National Grid website will also be updated to include the color-coded alert system information (active and no active excavation). National Grid will also inform school principals of the schedule of work.*

4. Audience member stated that he is a parent and emphasized that it is important to remember that parents have no way to obtain information about the Site.

*National Grid provides notifications to those on the mailing/email list, which includes the principals of the neighboring schools. Due to privacy issues, National Grid does not have access to student/parent information. National Grid will continue to work with the school principals in developing an effective way to communicate with the parents. The best way to find out information currently is to sign-up to the Tidewater mailing/email list via the National Grid website. National Grid requested that audience members tell other parents/community members about this and encourage them to sign up so that they can receive information directly from National Grid.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

- Audience member stated that parents from the International Charter School want a way for the information to be communicated to the parents.

*National Grid will continue to work with the school principals in developing an effective way to communicate with the parents. National Grid encouraged parents to sign-up for the mailing and/or email lists, as well as visit the National Grid website, to obtain information.*

- Audience member stated that he/she feels that the parents have no way to determine what is going on at the site and suggested possibly implementation of additional bulletin boards.

*The bulletin boards were installed at locations proximate to the Tidewater site, as well as accessible and visible to the schools. The two site bulletin boards are located close to each of the neighboring schools. National Grid will look into the possible installation of additional bulletin boards, as well as continuing to work with the school principals in developing an effective way to communicate with the parents.*

- The principal from Blackstone Academy stated the community has various levels of technical understanding and that disseminating information about the Tidewater Site is difficult.

*In the future, National Grid will prepare simple executive summaries for major report submittals. In preparing these summaries, National Grid will make every effort to use brief and nontechnical terminology in communications to the public. In the near future, National Grid will prepare an executive summary for the recent Site Investigation Report as well as an updated Fact Sheet which will be distributed through the mailing lists, as well as placed into the information repositories. National Grid will also continue to work with the school principals in developing an effective way to communicate information to the parents.*

- Audience member stated that, as a parent, the 2- hour notice provided through the phone message alert system was not enough. In addition, notification regarding the Tidewater site needs to be provided to more parties, such as elected officials and School Committee(s). A presentation of information would be warranted.

*The mailing list established for the Tidewater project does include local elected officials as well as school representatives, including the Principals of the Blackstone Academy, International Charter School and Francis J. Varieur School, as well as the Superintendent of schools for the City of Pawtucket. National Grid would be happy to include members of the School Committee on the mailing list, upon receipt of their contact information. National Grid also is willing to meet with*

Summary of Meeting

Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*members of the school and local government to present information about the Tidewater site and answer any questions that they may have.*

9. Audience member requested that technical documents be translated into “everyone speak” language.

*National Grid is attempting to do this and will continue to try to produce documents that are better understood by the public.*

10. Audience member asked when RIDEM will be ready to review the Site Investigation Report (SIR).

*Joseph Martella of RIDEM provided details regarding the regulatory process under the RIDEM Remediation Regulations. He indicated that the Public Involvement Plan must be finalized and in place before RIDEM’s review of the SIR can begin.*

Audience member enquired about the timing of this review and if the spring would seem reasonable.

*RIDEM indicated that it may be possible but reiterated that PIP must be finalized before the review of the SIR begins.*

11. Audience member requested that live translators be provided at public meetings.

*National Grid would be happy to provide translators, if requested by the public in advance of the meetings. Future notifications will include language regarding the availability of translators upon request by the public.*

12. Audience member spoke about historical mercury spill and lasting impact on concern from neighborhood. Audience member enquired about money from court settlement and publicly available information regarding mercury spill. He requested that information about the mercury spill, as it pertains to the history of the Tidewater Site, be included on the website and presented during the poster board session.

*National Grid did not own the property when the mercury spill took place in 2004 and was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid purchased the property from*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*Southern Union but did not acquire Southern Union's liability for the mercury issues on the property. The mercury contamination from the 2004 spill has been cleaned up and removed from the property. In addition, the buildings have been checked for mercury and no mercury is currently stored on-site. National Grid stated that the files associated with the mercury spill are public information and can be reviewed through RIDEM.*

The audience member further requested that information on the mercury spill be posted on the National Grid website.

*National Grid explained that it was not liable for the mercury release was not involved in the cleanup, court proceedings or settlement. Southern Union was the party solely responsible for cleanup of the mercury incident. National Grid indicated that it would consider the request and provide a formal response in the response to comments on the PIP.*

13. Audience member concerned about Tidewater flyer that he received on his door from Environmental Justice League. The flyer depicted biohazard marker and list of chemicals with associated acute health hazards. Audience member relayed information about members of his household and neighbors being diagnosed with cancer and is concerned about what he is being exposed to at his home as he lives on Thornton Street located right next to site. He stressed that he wants to know if he is safe.

*National Grid stressed that the Site is fenced and locked to keep people off of the property. Under normal site conditions, the Site is safe to the community- in other words, there is no potential for airborne contaminants. During times of excavation, when soil is dug up and moved around, there is a potential for airborne contaminants. During soil excavation, National Grid follows an air quality monitoring program which has received public input and has been reviewed and approved by RIDEM. The results of this monitoring are posted to the bulletin boards as well as the Tidewater websites. This program was followed during the recent electrical substation upgrade project. The majority of excavation associated with this project is complete, with the exception of minor fence post installations and minor excavations associated with properly decommissioning equipment. Air data from this project did not show sustained exceedances of the thresholds (defined as being held over a 5-minute time period) at any time. A few transient exceedances of the thresholds were noted during the work which were not associated with the excavation activities (i.e., transient exceedances due to weather interference (rain), movement of trash material, orange peel, etc.) .*

486 Pleasant Street  
Pawtucket, Rhode Island

Audience member asked whether there are emissions coming from the site without moving the soil? Also, audience member wanted to know about indoor air monitoring and whether or not they should be concerned about migration/volatilization into buildings on Thornton Street.

*Contaminants from the site are not getting into the air (i.e., volatilizing) from the soil and groundwater under normal conditions (i.e., no soil being moved or disturbed). The majority of surface soils at Site are indicative of urban fill – soils which would typically be found in urban or city environments and exhibit low levels of contaminants. The majority of impacts are found below the ground surface (deeper than 2 feet) in the soils, at or below the groundwater table. In addition, the majority of soil, groundwater and separate phase product (oil) impacts are found where the historical Manufactured Gas Plant and Power Plant operations took place, primarily along the river area between Winter Street and the land behind the Max Read Field. The area where the residences are located along Thornton Street are in an area where historical operations did not occur and do not have elevated levels of observed impacts. This area is also located upgradient of the site – groundwater from the Site flows “downhill” towards the river, not towards the homes on Thornton Street. Based on this information, National Grid believes that the buildings on Thornton Street are unaffected by the migration and/or volatilization from impacts on the Tidewater Site.*

*The drawbacks to indoor air testing were also discussed, as this type of testing typically will pick up standard house hold products and chemicals, such as paint, cleaners, etc., which cannot be differentiated from possible site contaminants.*

*The findings of the drilling program in Max Read Field were also discussed. Results of the explorations indicated the presence of visually impacted soil at depths greater than 2 feet in a limited area on the eastern portion of the field. The soils at depth are not accessible (i.e., they are covered with 2 feet of visually non-impacted soil which would need to be removed). The exploration program was conducted with knowledge by the City of Pawtucket and the City is aware of the findings of the investigation.*

14. Audience member commented on gas smell at Thornton and Merry Streets and whether or not they are safe or being exposed to natural gas (or its additives).

*The odor that the audience member says he smelled is likely associated with mercaptan. Natural gas by itself is odorless. Mercaptan is an odorant that is added to natural gas so the gas can easily be detected. It is carried with the natural gas stream.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

*National Grid will contact their Natural Gas Division to find out more information about this concern.*

15. Amelia Rose of the Environmental Justice League of Rhode Island (EJLRI) introduced herself and her agency to the audience. She indicated that EJLRI had access to funds from the US Environmental Protection Agency (USEPA) and could be used as a resource to the community. She also suggested that National Grid have a poster board regarding vapor intrusion during the Community Informational Session to educate the public.

*National Grid will consider adding a poster board regarding vapor intrusion to the Community Informational Session.*

*RIDEM also added that the potential for volatilization of contaminants from the site is not supported by the results of the recent air monitoring program (hand held field instruments) which is being followed as part of the electrical substation project.*

16. Audience member commented on concern regarding interfacing with the schools and the community. They suggested providing information about the site at a 4-6<sup>th</sup> grade comprehension level. Also, they requested that National Grid inform Shea High School about the impacts on the Max Read Field as they use the athletic field for sport activities.

*National Grid will look into this request and get back to the public. In the future, National Grid will prepare simple executive summaries for major report submittals. In preparing these summaries, National Grid will make every effort to use brief and nontechnical terminology in communications to the public. In the near future, National Grid will prepare an executive summary for the recent Site Investigation Report as well as an updated Fact Sheet which will be distributed through the mailing lists, as well as placed into the information repositories. National Grid will also continue to work with the school principals in developing an effective way to communicate information to the parents. Also, National Grid will consider adding Shea High School to the mailing list.*

17. Audience member suggested that Cape Verdean be added as a language to the translation list. Also suggested that Oak Hill Nursing Home be added to the distribution list.

*National Grid will consider adding Cape Verdean to the translation list. National Grid will also consider adding Oak Hill Nursing Home to the mailing list.*

Summary of Meeting  
DRAFT Public Involvement Plan (PIP)  
Former Tidewater Facility  
Pawtucket, Rhode Island

January 29, 2013 6 PM  
Francis J. Varieur Elementary School  
486 Pleasant Street  
Pawtucket, Rhode Island

18. Audience member enquired why this is the first Public Involvement Plan in RI and what is typically done in Massachusetts?

*RIDEM indicated that the Remediation Regulations were recently modified in November 2011 to include a formal Public Involvement process, similar to that established in Massachusetts. This is the first PIP in Rhode Island due to the recent change in the regulations. Massachusetts has had a PIP process in place for at least 20 years.*

19. Audience member inquired if the site is “safe,” why all the concern?

*RIDEM indicated that the Site is under the State’s guidance for a reason – there are soil and groundwater impacts at the site which do pose a certain level of exposure risk. RIDEM stressed that the fencing is also there for a reason – to prevent people from entering the Site. RIDEM also gave the example of different levels of exposure at the Site – i.e., on-site workers who are excavating soils (potential high exposure risk) versus people off-site at or near the fence line (low potential exposure risk).*

20. Audience member enquired if wildlife could present an exposure risk via soil disturbance (i.e., burrowing, digging) on site.

*GZA performs weekly site walks to inspect and document the conditions at the Site. There has not been evidence of significant soil disturbance by wildlife at the Site. In the future, we will continue to monitor soil disturbance.*

21. Audience member requested status on South Washout Area repair.

*The earthwork associated with the South Washout Area has not been completed. National Grid will continue to work with the City to have this work completed.*

22. Audience member enquired when the public will receive a response to comments.

*The schedule presented in the presentation was revisited. A summary of today’s meeting will be provided within 10 business days (by 2/12/2013). Written comments on the draft PIP from the public should be provided to RIDEM within 10 business days (by 2/12/2013). RIDEM indicated that an extension to the public comment period may be requested in writing. Timing for response to written comments will be based on how many comments are received.*

**Cc:** joseph.martella@dem.ri.gov; Amelia Rose (amelia.rose@ejlri.org); jenrossi3@gmail.com  
**Subject:** Tidewater Site communications, follow-up suggestions  
**Attachments:** PIP Recommendations Tidewater Community Group.doc

Dear Michele and Meg,

We held a meeting last week with members of the Tidewater community (school officials, parents of school children, and members of the neighborhood) to follow-up on National Grid's recent public meeting. One of the primary concerns expressed was that the language used in the outreach efforts was not accessible to most people. I personally spoke with a woman in the neighborhood who said that she keeps going to these meetings, but she doesn't understand anything that is said. I also noted that one of the attendees prefaced his comments at the meeting with, "I know I sound ignorant, but..." The school administrators, parents and residents had several suggestions of ways to make the communications more effective. We've compiled those suggestions – I am attaching the list and pasting it below.

As a college professor, I am constantly charged with translating expert knowledge into language that is accessible, often to kids coming right out of high school. I'm happy to compile a list of terms that are hard for non-specialists to understand (e.g., remedy, remediation, cap, program letter, abutter, action limits...). The list of definitions that National Grid provided in a former communication is a step in the right direction, but it would be better to replace those specialized terms with more accessible alternatives.

On a different note, can you tell me if you've been able to figure out what the source of the gas smell is that the resident at the public meeting complained about? I've heard multiple people complain about intermittent gas smells over the last couple of years.

Sincerely,

Holly Dygert

### **PIP Recommendations for the Tidewater Site March 6, 2013**

#### **Issues of concern that people would like to be addressed at the poster session:**

Gas Smells – What is this? What are potential impacts?

Differences among remedial alternatives – what options does National Grid have and why are they choosing one option over another?

What are potential future uses of this land/site after remediation? Will National Grid still own the site? Have there been discussions with City of Pawtucket?

What are the implications for neighbors' health based on what kinds of contaminants are at the site?

#### **Further Suggestions for Effectively Communicating with the Public (in preparation for the poster session):**

National Grid should develop separate communication materials for schools – and provide enough copies to give place one in each student's backpack.

School principals want to review all of the fliers/documents that will be sent to parents before NG makes copies, translates, or finalizes the communication, to make sure they communicate effectively. Julie Nora (ICS) and Carolyn Sheehan (Blackstone Valley) made this suggestion.

Neighbors also want to review materials before NG sends out communications to neighborhood – point person can be Amelia Rose at EJ League who can send out draft to list of neighbors and collate comments/suggestions within one week and send back to NG for finalization (worry is that the communications are too wordy and will not be read).

Hold regular meetings with a core group of residents and school personnel to give NG/GZA a chance to communicate in a smaller group setting – in addition to the larger public meetings that happen less frequently. This will help increase communication with the most committed/involved residents and school officials who will be ambassadors to other residents and the wider school community to generate their interest and involvement. Also will make larger public meetings less adversarial and more productive because it won't be the first time people are hearing about a certain issue or proposal.

Translation at larger public meetings should be made available regardless of whether someone contacts NG to say they are coming to a meeting – this would help build trust with the neighborhood and principals could guarantee to parents that interpretation would be available at public meetings no matter what.

Community members recommend that they be permitted to have their own poster/table at the poster session in addition to what NG/GZA are preparing.

NG should create bookmarks with all relevant contact information as well as instructions for how people can get on the email/phone notification lists. These will be helpful to hand out in the neighborhood and at the schools and would be more likely to be read and communicate effectively – rather than a long letter.

**SUMMARY OF PROPOSED CHANGES TO PIP**

## **Summary of Proposed Changes to the Public Involvement Plan (PIP)**

Based on Public Comments Received

Former Tidewater Facility

Pawtucket, Rhode Island

---

- Revise to state that National Grid will provide the following in English, Spanish and Portuguese:
  - Notification Mailings
  - Fact Sheets
  - Brief Executive Summaries which will accompany future reports.
- Revise the PIP to change the time period for the public meeting related to the Remedial Action Work Plan (RAWP). As revised, the public meeting regarding the RAWP will be held on the draft version of the RAWP prior to submittal to RIDEM.
- Revise the PIP to delete the reference of posting of weekly air monitoring data.
- Clarify definition of day-to-day uses of the Site that do not fall under the jurisdiction of the PIP. Revise the sentence in the PIP to state “This plan is not intended to cover Site activities relative to the day-to-day operations, including repair and maintenance of the natural gas regulating facility and electrical substation involving minor soil disturbances (i.e., fence post installation) or other uses of the property by National Grid. Activities at these facilities involving excavations of soils with the potential to create volatile emissions are covered by this PIP. In the event of a facilities emergency requiring immediate soil excavation (utility repair, etc.), National Grid will follow the soil management procedures prepared for the previous natural gas station regulator and electrical substation work (i.e., April 2011 Materials Management Plan and November 2012 Soils Management Plan, respectively). In addition, air monitoring will be completed during these emergency events in accordance with the September 28, 2012 air monitoring summary memorandum submitted to RIDEM to the extent practical.”
- Add a summary sheet of proposed revisions and with final approved revisions as an appendix to the PIP.
- Update PIP regarding how National Grid will work with the three neighboring schools to send information (i.e., fact sheets, public notifications, flyers) home to the students.

NOTIFICATION OF CONCURRENCE OF RESPONSE TO COMMENTS RECEIVED AND  
FINALIZATION OF THE PIP

RHODE ISLAND

DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

235 Promenade Street, Providence, RI 02908-5767

TDD 401-222-4462

August 1, 2013

Ms. Michele V. Leone  
Manager, New England Site Investigation & Remediation  
National Grid  
40 Sylvan Road  
Waltham, MA 02451-1120

RE: Tidewater Manufactured Gas Plant (former)  
Tidewater Street  
Pawtucket, Rhode Island

Dear Ms. Leone:

On November 9, 2011, the Rhode Island Department of Environmental Management (the Department) amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases, (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in an efficient manner.

In the matter of the above referenced "Site" (as defined in the Industrial Property Remediation and Reuse Act), and in accordance with Rule 7.07.E (Public Involvement Plans) of the 2011 Remediation Regulations, the Department's Office of Waste Management (OWM) has received the following document concerning National Grid's response to public comments on the draft Public Involvement Plan (PIP):

- Response to Public Comments, Draft Public Involvement Plan, Former Tidewater MGP and Power Plant Site, Pawtucket, Rhode Island, RIDEM Case No. 95-022, prepared by GZA GeoEnvironmental, Inc. (GZA), and dated March 22, 2013.

The OWM has reviewed the above referenced Response to Public Comments, and concurs with the proposed changes to the PIP, as listed in that document's attachment titled "Summary of Proposed Changes to the Public Involvement Plan (PIP)." Please prepare a final version of the PIP based upon the proposed changes.

The Department acknowledges that sufficient time has passed since the submittal of the Response to Public Comments, such that some of the information provided in the responses may require updating based upon decisions and activities that have taken place since March 22, 2013. For example, National Grid's decision to perform a soil gas investigation at the site, in response to public concerns raised about potential vapor intrusion. Therefore, the Department requests that

the March 22, 2013, responses be reviewed, and where deemed necessary, that changes or corrections be made, and/or updated information be added as appropriate. This letter and the revised updated responses to public comments should be added to the Final PIP as individual exhibits. Once these items are addressed, please submit the revised Final PIP with all exhibits to the Department in both hard copy for the public file and electronic PDF format suitable for posting on the Department's Tidewater web page.

If you have any questions regarding this letter, please contact me by telephone at (401) 222-2797 extension 7109 or by e-mail at [joseph.martella@dem.ri.gov](mailto:joseph.martella@dem.ri.gov).

Sincerely,

A handwritten signature in black ink, appearing to read "Joseph T. Martella II". The signature is fluid and cursive, with the first name "Joseph" and last name "Martella" being the most prominent parts.
