Providence, Rhode Island 02908

March 31, 2023

Brandon Smith, Sr. Project Manager  
ENVi Environmental, LLC  
10247 Dewhurst Road, Suite 102  
Elyria, Ohio 44035

Dear Mr. Smith:

The Rhode Island Department of Environmental Management's (RIDEM) Office of Land Revitalization and Sustainable Materials Management (LRSMM) has reviewed your February 23, 2023 Beneficial Use Determination (BUD) renewal application on behalf of Cumberland Foundry in Cumberland, Rhode Island. After reviewing the application and required data submission, we find the application acceptable.

Therefore, enclosed is the BUD approval, with conditions included, for the reuse of spent foundry sand generated by Cumberland Foundry in 2023 and part of 2024. Your approval expires on March 22, 2024. Please submit your renewal with the required analytical testing results and supplemental data, as described in requirements 10 and 11, at least 30-days prior to the expiration date.

Sincerely,

Nathan Arruda  
Environmental Scientist  
Office of Land Revitalization and Sustainable Materials Management  
401-222-2797, ext. 2777511

## **SOLID WASTE BENEFICIAL USE DETERMINATION (BUD)**

### **CONDITIONS FOR RE-USE OF SPENT FOUNDRY SAND CUMBERLAND FOUNDRY**

**March 2023**

Cumberland Foundry is a cast iron foundry that uses the sand molding process to produce iron castings for many different types of industries. The sand molds are a mixture of silica sand, bentonite clay and water. The spent foundry sand from the molds are the unusable byproduct generated by the metal-casting industry. Spent foundry sand that is just allowed to continue to accumulate, with no ultimate management plan, is collectively regulated as a solid waste in Rhode Island. Cumberland Foundry has submitted for approval a BUD request for re-use of the spent foundry sand produced and accumulated at their facility at 310 West Wrentham Road in Cumberland, Rhode Island. Based upon the representations made in the application, the RIDEM Office of LRSMM hereby grants approval for the reuse of this waste under the following conditions:

1. The spent foundry sand must be handled and processed in accordance with this approval, the original BUD application and the renewal BUD application submitted by ENVi Environmental, LLC on behalf of Cumberland Foundry and received by RIDEM on August 19, 2020, and February 23, 2023
2. A maximum of 600 tons of spent foundry sand shall be stored on site, at the designated area according to Appendix C of the original BUD application, at any time for future processing.
3. Erosion and Stormwater control shall be conducted according to Section 6(j) of the original BUD application, with the use of a vegetative cover, silt fences and filter socks/berms.
4. RIDEM approves of the reuse of the spent foundry sand for agricultural blending with loam and construction and general fill applications as discussed in Section 10 of the original BUD application. This approval does not include being used in a product labeled as compost.
5. According to Section 6(d) of the original BUD application, Cumberland Foundry shall pass the excess sand through a screening machine to remove any foreign matter, metal and debris.
6. The facility shall provide the Department, its authorized officers, employees, and representatives, and all other persons under Department oversight, an irrevocable right of access to the facility at all reasonable times for the purposes of performing inspections, investigations, testing, and examining records. The Department or other authorized designated personnel shall have the right to access the facility at all reasonable times for the above-stated purposes without prior notice. Refusal to permit reasonable inspections, tests and investigations shall constitute valid grounds for denial, revocation or suspension

of this BUD approval; and/or issuance of a Notice of Violation with Administrative Penalty.

7. This approval expires on March 22, 2024. Cumberland Foundry may request an annual renewal of this approval that may be granted with the approval of RIDEM's Director.
8. RIDEM's granting of this approval does not affect the responsibility of Cumberland Foundry to meet all zoning and other local ordinances and comply with any other State or Federal requirements or approvals.
9. This approval may be modified, amended, suspended, or revoked at the discretion of RIDEM.
10. The facility shall collect the following data on a yearly basis:
  - a. Three annual samples for the total metals listed in the Remediation Regulation's Table 1 for Direct Exposure Criteria, as well as TPH. Sampling of the spent foundry sand stockpile shall use an approved sampling method as described in Table 1.16 of the Remediation Regulations. The sampling protocol shall follow the description as provided in Section 11 of the application.
  - b. Records of the physical description of the final product and the potential reuse, as well as the company buying the product, their address, and the tonnage sold.
11. Cumberland Foundry shall keep all records and data as discussed in number 10 of this Approval for a period of at least 1 year. All records shall be made available to representatives of the Office of LRSMM upon request. Upon renewal of this BUD permit, an electronic copy of the previous year's records and data shall be included in the application.

Dear Mr. Smith:

The Rhode Island Department of Environmental Management's (RIDEM) Office of Land Revitalization and Sustainable Materials Management (LRSMM) has reviewed your August 19, 2020 Beneficial Use Determination (BUD) application on behalf of Cumberland Foundry in Cumberland, Rhode Island. After reviewing the application and holding the required public hearing and public comment period, we have approved the application.

Therefore, enclosed is the BUD approval, with conditions included, for the reuse of spent foundry sand generated by Cumberland Foundry in 2021 and part of 2022. Your approval expires on January 28, 2022, 1-year from the date on this approval. Please submit your renewal with the required analytical testing results and supplemental data, as described in numbers 10 and 11, at least 30-days prior to the expiration date.

Sincerely,

*Kasie McKenzie*

Re: Beneficial Use Determination Application - Revised  
Cumberland Foundry  
Cumberland, Providence County, Rhode Island

Dear Ms. McKenzie,

Please find the enclosed revised Beneficial Use Determination (BUD) Application for Cumberland Foundry in Cumberland, Rhode Island for your review. Revisions were made to the BUD Application in response to your questions/comments based on your review, which you emailed ENVi Environmental LLC on July 15, 2020. The revisions to the narrative were made in Microsoft Office Word track changes for ease of your review. Additionally, a site plan map (Appendix C) and an Ohio Environmental Protection Agency *GENERAL PERMIT AUTHORIZATION TO BENEFICIALLY USE FOUNDRY SAND FROM, IRON, STEEL AND ALUMINUM FOUNDRIES FOR ROAD CONSTRUCTION SUB-BASE, AS A COMPONENT IN STRUCTURAL FILL, AND AS PIPE BEDDING* (Appendix G) were added to the appendices.

Please contact our office with any questions following your review. We will finalize the BUD Application upon receipt of your authorization of the revisions.

Sincerely,  
ENVi Environmental, LLC

**BENEFICIAL USE DETERMINATION**

**2020 APPLICATION**

**CUMBERLAND FOUNDRY**

**CUMBERLAND, PROVIDENCE COUNTY, RHODE ISLAND**

**July 24, 2020**

## I. Introduction

ENVi Environmental, LLC (ENVi) has prepared this Beneficial Use Determination (BUD) Application on behalf of Cumberland Foundry to request a variance from the Solid Waste Regulations in order to beneficially use spent, non-toxic foundry sand generated by Cumberland Foundry located in Cumberland, Rhode Island. This BUD Application is for review and consideration by the Rhode Island Department of Environmental Management (DEM) Office of Waste Management.

## II. Required Information/Data

This BUD Application addresses the necessary information to beneficially use the spent foundry sand generated by Cumberland Foundry. The following information required by DEM is included in this BUD Application.

1. Operational activities which will be implemented to minimize or eliminate environmental hazards associated with the proposed recycling of the spent foundry sand.

Processing of this material does not generate environmental hazards. No air emissions are expected to occur. Erosion and windblown sand are negligible because of the compactibility of the sand and the vegetated cover. Storm water runoff is controlled by a vegetative cover and silt fence. The facility was formerly covered by a Rhode Island Pollutant Discharge Elimination System (RIPDES) General Permit. Currently, the facility has a RIPDES "No Exposure" certification, which is included in **Appendix A**.

2. Information regarding why spent foundry sand is a viable and a beneficial substitution for commercial products or raw materials.

Foundry sand is an industrial byproduct generated by the metal-casting industry. Foundry sand generated by iron (gray and ductile), steel, and aluminum foundries using silica sand with chemical or clay binders can be beneficially used for road construction sub-base, as a component in structural fill, and as pipe bedding.

3. The benefit of recycling the spent foundry sand relative to its being sent to a State's solid waste landfill and how the spent sand will not pose a threat to public health or the State's environmental resources.

Recycling and reuse of spent foundry sand will prevent these materials from needlessly contributing to the waste volume going to landfills. These materials are natural products and can be used to produce a product that is used for land application purposes. No air emissions are expected to occur. Erosion and windblown sand are negligible because of the compactibility of the sand and the vegetated cover. Storm water runoff is controlled by a vegetative cover and silt fence. Additionally, concentrations of samples of the material submitted for *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases*, March 3, 1993, as amended November 2011, (*Remediation Regulations*), *Table 1 Direct Exposure Criteria*

for soil were less than respective residential limits. A comparison summary table is included in **Appendix B**.

4. Discussion of the end market demand for the spent foundry sand.

Spent foundry sand is a viable and economically beneficial material which will be used in the construction industry.

5. Discussion of how spent foundry sand reuse/recycling will not be detrimental to the environment.

Recycling and reuse of spent foundry sand will prevent these materials from needlessly contributing to the waste volume going to landfills. These materials are natural products and can be used to produce a product that is used for land application purposes. No air emissions are expected to occur. Erosion and windblown sand are negligible because of the compactibility of the sand and the vegetated cover. Storm water is controlled by a vegetative cover and silt fence. Additionally, concentrations of samples of the material submitted for *Remediation Regulations, Table 1 Direct Exposure Criteria* were less than respective residential limits.

6. Provide a narrative as to how environmental, engineering, and institutional controls may be implemented to recycle/reuse properly and safely the spent foundry sand, which will include the following information.

- a. The quantity of the spent foundry sand to be received/recycled.

40-60 tons of spent foundry sand is generated monthly.

- b. The maximum quantity of the spent foundry sand to be stored at the site at any one time.

600 tons

- c. The name and address of the generator.

Name: Cumberland Foundry Co.  
Address: 310 West Wrentham Road, Cumberland, Rhode Island  
02864  
Phone Number: (401) 658-3300  
Contact: Tom Lucchetti, President

- d. A detailed narrative and schematic diagram of the production, manufacturing, and/or residue process by which the waste material is produced.

Cumberland Foundry Co. is a cast iron foundry that uses the sand molding process to produce iron castings for many different types of industries.

Silica sand is purchased from Bryant Sands McConnellsville of New York and stored on the property in a 100-ton sand silo tank. It is then gravity fed into a sand blending machine (Mueller). Once inside the blending machine additions of bentonite clay and water are mixed into the silica sand to promote compactibility.

Sand molds are then produced using this sand and filled with molten iron. Once the molten iron solidifies the castings are removed from the sand and the sand is then returned to the blending machine where more new silica sand is added.

After repeating this process many times, the result is a buildup of excess sand in the system necessitating the removal of some of the sand. This excess sand is then removed and stored in a pile outside of the facility on a hard pan gravel surface. The sand is vegetated and surrounded by silt fence. Approximately 10% of the total amount of sand used per day goes into the excess sand pile. If needed, this sand may be brought back in to the building and re-used.

The sand usage varies and is determined by the amount and size of sand molds being made. New sand is added into the operation mix each day to ensure the vitality and compactibility of the molding sand. As more new sand is added to the operation mix, the volume of total sand builds up in the system which means some of the sand must be removed from the system.

The sand is passed through a reclaiming machine before it is reused in the system. At that point, any foreign matter is removed from the sand. That is, any pieces of metal or debris. Also, if the permit is granted, the facility would purchase a screening machine to pass the excess sand through before loading on a truck.

A site plan map is included as **Appendix C**. A schematic diagram of the production, manufacturing, and/or residue process by which the waste material is produced is presented in **Appendix D**.

- e. The anticipated uniformity of the spent foundry sand.

The spent foundry sand is a homogenous, clean, grey-black, fine (80 AFS grain fineness) material.

- f. A description regarding how the quantity and toxicity of the spent foundry sand will be minimized by the generator.

The quantity of the material is minimized by re-using the material in the manufacturing process, if possible. The material is non-toxic, as indicated in the spent foundry sand laboratory analytical results. It is important to note that the new sand added is blended into the already used sand. Once mixed,

there is no “new sand” or “old sand”. The only sand removed is an amount that keeps the system from overflowing. It is excess sand, not new sand, or old sand. The results of sampling/testing have indicated the buildup of metals in the reused, or excess sand, is negligible.

- g. A routine spent foundry sand inspection schedule.

Spent foundry sand is regularly inspected as part of the daily manufacturing process when the facility is operational.

- h. A loss minimization plan, which will include site controls relating to the storage, handling, and processing of the spent foundry sand.

Cumberland Foundry Co. intends to process all or as close to all the materials in the piles into finished products. No storage, handling, or processing control issues are anticipated, and no significant losses are expected. Spent foundry sand loss minimization is part of the daily routine housekeeping schedule when the facility is operational.

- i. A residual solid waste management plan, which will include operational activities to manage and dispose of residual solid waste. A location for the final disposal of residual solid wastes will be identified.

Cumberland Foundry Co. intends to process all or as close to all the materials in the piles into finished products. No storage, handling, or processing control issues are anticipated, and no significant losses expected. Spent foundry sand loss minimization is part of the daily routine housekeeping schedule when the facility is operational.

- j. A nuisance control plan, which will include operational activities to control odor, sediment, storm water, and erosion.

No malodors are expected. Storm water runoff from these piles and processing operations is controlled by a vegetative cover and silt fence. Spent foundry sand is controlled using Best Management Practices (BMPs) such as utilizing filter socks/berms, vegetative cover, and silt fences.

7. Address why the proposed recycling of spent foundry sand is not merely an alternate method of disposal.

The proposed recycling is not another method of disposal because most of the material that comprises the spent foundry sand stockpile will be made into a saleable product.

8. Describe the processing involved to recycle/reuse spent foundry sand and provide data which supports that mixing of different types of material improves the usefulness of the recycled spent foundry sand.

The spent foundry sand requires minimal processing and may be mixed with other materials to be used as fill for grading/shaping or pipe bedding.

9. The reuse of spent foundry sand as a “manufactured soil product” (*i.e.: solid waste that is or has been altered or rendered into a material with soil type properties*) will be compliant with the Residential Direct Exposure Criteria for soils listed in Rule 8.02 of the *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases*, the Compost Quality and Distribution Standards listed in Rule 8.8.00 (Compost Product Requirements and Distribution) of the Solid Waste Regulations, and will not degrade the environment.

- a. Is compliant with the Residential Direct Exposure Criteria for soils listed in Rule 8.02 of the *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases*.

It is important to note that the new sand added is blended into the already used sand. Once mixed, there is no “new sand” or “old sand”. The only sand removed is an amount that keeps the system from overflowing. It is excess sand, not new sand, or old sand. The results of sampling/testing have indicated the buildup of metals in the reused, or excess sand, is negligible. Concentrations of samples of the material submitted for *Remediation Regulations, Table 1 Direct Exposure Criteria* for soil were less than respective residential limits. A comparison summary table is presented in **Appendix A**. Laboratory analytical reports are presented in **Appendix E**.

- b. Is compliant with the Compost Quality and Distribution Standards listed in Rule 8.8.00 (Compost Product Requirements and Distribution) of the Solid Waste Regulations.; and

Sampling is discussed in Section 11 and the Sampling and Analysis Plan (SAP) presented in **Appendix F**.

- c. Will not result in degradation of the environment.

Recycling and reuse of spent foundry sand will not degrade the environment.

10. Address whether the spent foundry sand will be used in a land application. If so, relevant engineering standards and controls will be implemented in accordance with the Solid Waste Regulations. The controls may include final cover, leachate collection and removal, and gas control and recovery systems.

The beneficial reuse of the excess foundry sand product will be utilized as agriculture blending of foundry sand with loam, geo-technical fill, flowable fill, pipe bedding, concrete septic and pipes, construction materials, and general fill applications.

These are beneficial reuses that have already been granted to iron foundries in many states across the country. A copy of an Ohio Environmental Protection Agency (OEPA)

*GENERAL PERMIT AUTHORIZATION TO BENEFICIALLY USE FOUNDRY SAND FROM, IRON, STEEL AND ALUMINUM FOUNDRIES FOR ROAD CONSTRUCTION SUB-BASE, AS A COMPONENT IN STRUCTURAL FILL, AND AS PIPE BEDDING* is included in **Appendix G**.

According to a United States Environmental Protection Agency (USEPA) study, *Beneficial Reuse of Foundry Sand: A Review of State Practices and Regulations* (December 2002), state support to streamline the approval process can increase sand reuse while protecting against potential environmental impacts.

Authorization to beneficially reuse excess foundry sand would give the facility tremendous financial relief from the ever-rising costs to dispose of a product that could be beneficially reused by many useful industries at a much lower cost to them while at the same time preserving finite limited capacity in landfills.

11. A waste characterization plan will include the following protocols for sample collection and analyses, which will provide a representative assessment of the waste material.

- a. Sample methodology (i.e. locations, times, frequency per volume etc.).

The spent foundry sand has been sampled and submitted for analysis of *Remediation Regulations, Table 1 Direct Exposure Criteria* for soil. No concentrations of the spent foundry sand exceeded residential limits (**Appendix B**). The spent foundry sand is a relatively homogenous material. Therefore, additional sample collection is not warranted unless material characteristics change.

- b. Sample type (i.e., discrete, grab, composite, etc.).

Composite samples of the spent foundry sand were collected.

- c. Analytical methods used to identify potential contaminants of concern (COCs).

The following analytical methods were used to identify potential contaminants of concern (COCs):

8260B	8270D
8081A	8082A
6010B	7471A
7196A	9012A
Moisture	3050B
3060A	3540C
5030A	7471A
9012A	

- d. Physical/chemical analyses (i.e. size, density, percent solids, liquid content, pH, reactivity, leachability [TCLP test], etc.).

The percent solids of the spent foundry sand ranged from 97.1% to 97.3%. Leachability tests are not considered to be necessary for applications such as fill for grading/shaping or pipe bedding.

- e. Biological properties analyses (i.e. pathogens).

Pathogens tests are not necessary for applications such as fill for grading/shaping or pipe bedding.

- f. Substance variability.

The spent foundry sand is a homogenous, clean, grey-black, fine (80 AFS grain fineness) material.

- g. Grab and/or composite samples which will be collected/analyzed to adequately assess the physical, chemical, and biological properties of the waste.

Three composite samples of the spent foundry sand were collected.

- h. Potential human health and ecological risks assessment.

The spent foundry sand has been sampled and submitted for analysis of *Remediation Regulations, Table 1 Direct Exposure Criteria* for soil. No concentrations of the spent foundry sand exceeded residential limits (**Appendix B**).

- i. Verification sampling and analysis plan, which will include a comprehensive written report identifying the concentration/distribution of COCs.

The Sampling and Analysis Plan used to collect the spent foundry sand samples is included in **Appendix F**.

12. Parties involved in the storage/handling/processing/use of spent foundry sand shall be required to provide financial assurance that the BUD project will be completed, and unused spent foundry sand will be properly used and disposed.

Cumberland Foundry is a well-established company and will properly dispose of unusable materials and, remaining materials proper disposal is the sole responsibility of Cumberland Foundry should project operations cease.

- Landfill \$50.00 tipping fees
- Hauling \$150 per container (20 cubic yards)
- Loading: \$100 per hour for 2 hours per week

13. At the discretion of the DEM, additional information will be provided if required.

Please contact Cumberland Foundry if additional information is required.

14. All parties will certify the spent foundry sand processing and use facilities are not subject to actual or potential state/federal statutory/regulatory environmental violations. Also, all parties will certify if actual or potential violations exist, the processing of the waste or its use are not part of a DEM approved final settlement or remedy.

Cumberland Foundry certifies the spent foundry sand processing and use facilities are not subject to actual or potential state/federal statutory/regulatory environmental violations. Also, Cumberland Foundry certifies no actual or potential violations exist, and the processing of the spent foundry sand or its use are not part of a DEM approved final settlement or remedy.

## APPENDIX A

Exclusion Information

Master Permit Number: RIRNE0000

RIPDES ID: RIRNE0350

Submission of this No Exposure Certification constitutes notice that the operator identified in Operator Information of this form does not require permit authorization under RIDEM's Stormwater Multi Sector General Permit for its stormwater discharges associated with industrial activity from the facility identified in Facility Information section due to the existence of a condition of no exposure.

Select the purpose for filling out this form:

To obtain a new No Exposure Certification

Eligibility Information

State/territory where your facility is located: RI

Is your facility located on federally recognized Indian Country lands? No

Which type of form would you like to submit? No Exposure Certification (NEC)

By indicating "Yes" below, I understand that I am obligated to re-certify the no exposure status in accordance to RIPDES requirements, and, if requested, to the operator of the local municipal separate storm sewer system (MS4) into which the facility discharges (where applicable). I understand that I must allow the RIPDES permitting authority, or MS4 operator where the discharge is into the local MS4, to perform inspections to confirm the condition of no exposure and to make such inspection reports publicly available upon request. I understand that I must obtain coverage under a RIPDES permit prior to any point source discharges associated with industrial activity from the facility.

Yes

Have industrial stormwater discharges from your facility been covered previously under a RIPDES permit? Yes

➔ If yes, provide your most current RIPDES ID if you had coverage under RIDEM's MSGP or the RIPDES permit number if you had coverage under a RIDEM individual permit.  
RIR50F003

Has your facility previously been covered by a No Exposure exclusion? No

Has your facility previously been covered by a No Discharge exclusion? No

Facility Information

## Facility Information

Facility Name: Cumberland Foundry Co., Inc.

## Facility Address

Address Line 1: 310 West Wrentham Rd

Address Line 2:

City: Cumberland

ZIP/Postal Code: 02864

State: RJ

## Latitude/Longitude for the facility

Latitude/Longitude: 42.010382°N, 71.447034°W

Latitude/Longitude Data Source: Map

Horizontal Reference Datum: WGS 84

## Other Facility Information

Identify the 4-digit Standard Industrial Classification code or 2-letter Activity Code that best represents the products produced or services rendered for which your facility is primarily engaged, as defined in MSGP.

Primary Regulated SIC Code: OR

Primary Regulated Activity Code: AD1

## Tarpaulins Information

Do you make use of tarpaulins to protect materials or products stored outdoors from exposure to stormwater? No

Have any spills and/or chronic leaks of significant materials occurred at the facility in the three years prior to the submission of the No Exposure Certification? No

## Exposure Checklist

For your facility, are any of the following materials or activities exposed to precipitation, now or in the foreseeable future?

- ➔ Using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to stormwater:  
No
- ➔ Materials or residuals on the ground or in stormwater inlets from spills/leaks: No
- ➔ Materials or products from past industrial activity: No
- ➔ Material handling equipment (except adequately maintained vehicles): No
- ➔ Materials or products during loading/unloading or transporting activities: No
- ➔ Materials or products stored outdoors (except final products intended for outside use [e.g., new cars] where exposure to stormwater does not result in the discharge of pollutants):  
No
- ➔ Materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers: No
- ➔ Materials or products handled/stored on roads or railways owned or maintained by the discharger: No
- ➔ Waste material (except waste in covered, non-leaking containers [e.g., dumpsters]): No
- ➔ Application or disposal of process wastewater (unless otherwise permitted): No
- ➔ Particulate matter or visible deposits of residuals from roof stacks and/or vents not otherwise regulated (i.e., under an air quality control permit) and evident in the stormwater outflow:  
No

## Certification Information

I certify under penalty of law that I have read and understand the eligibility requirements for claiming a condition of "no exposure" and obtaining an exclusion from RIPDES stormwater permitting.

I understand that I am obligated to re-certify the no exposure status in accordance with the RIPDES requirements and, if requested, to the operator of the local municipal separate storm sewer system (MS4) into which the facility discharges (where applicable). I understand that I must allow the RIPDES permitting authority, or MS4 operator where the discharge is into the local MS4, to perform inspections to confirm the condition of no exposure and to make such inspection reports publicly available upon request. I understand that I must obtain coverage under a RIPDES permit prior to any point source discharges of stormwater associated with industrial activity from the facility.

Additionally, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. Signing an electronic document on behalf of another person is subject to criminal, civil, administrative, or other lawful action.

### Narrative

#### Job Narrative 240-120732-1

#### Revised Report

1,1,1,2-Tetrachloroethane was added to the volatiles list on all samples.

#### Receipt

The samples were received on 10/17/2019 4:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.6° C.

#### GC/MS VOA

Method 8260B: These jars were taken off a shelf in the sample receiving refrigerator, if they were opened in another part of the lab they could have been contaminated: CF-FSP-01 (240-120732-1), CF-FSP-02 (240-120732-2) and CF-FSP-03 (240-120732-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8270D: The continuing calibration verification (CCV) associated with batch 240-407667 recovered above the upper control limit for 2,4-Dinitrophenol, 2-Nitroaniline, 2-Nitrophenol, 4,6-Dinitro-2-methylphenol, 4-Nitroaniline, Hexachlorocyclopentadiene, 2,6-Dinitrotoluene and 2,4-Dinitrotoluene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: CF-FSP-01 (240-120732-1), CF-FSP-02 (240-120732-2) and CF-FSP-03 (240-120732-3).

Method 8270D: Samples CF-FSP-01 (240-120732-1), CF-FSP-02 (240-120732-2) and CF-FSP-03 (240-120732-3) have reporting limit for the analyte 2-Nitrophenol not supported by the low point of the initial calibration. The RL, however, is greater than the method detection limit for this compound; therefore, the results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

Method 8081A: The continuing calibration verification (CCV) associated with batch 240-408541 recovered above the upper control limit for cis-Chlordane. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: CF-FSP-01 (240-120732-1), CF-FSP-02 (240-120732-2) and CF-FSP-03 (240-120732-3).

Method 8082A: The following samples required a copper clean-up to reduce matrix interferences caused by sulfur: CF-FSP-01 (240-120732-1), CF-FSP-02 (240-120732-2) and CF-FSP-03 (240-120732-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 240-120732-1

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC Semi VOA

Qualifier	Qualifier Description
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

## APPENDIX F

## Sampling and Analysis Plan

### I. Objective

The overall purpose of sampling and analyzing spent foundry sand generated from Cumberland Foundry operations is to demonstrate acceptability for the beneficial use of the material through a request for a Beneficial Use Determination (BUD), which provides a variance from the Rhode Island Solid Waste Regulations. This Sampling and Analysis Plan (SAP) is part of a BUD Application, which must be submitted to the Rhode Island Department of Environmental Management (DEM) Office of Waste Management.

The scope of services for this SAP were performed in general accordance with the Rhode Island General Laws Chapter 23-18.9, entitled "Refuse Disposal," the *Rules and Regulations for Composting Facilities and Solid Waste Management Facilities*, January 1997, (Solid Waste Regulations), the *Rules and Regulations for Reduction and Recycling of Municipal Solid Waste*, March 1997, the *Rules and Regulations for Reduction and Recycling of Commercial and Non-Municipal Residential Solid Waste*, September 1996 (Recycling Regulations), the DEM Office of Waste Management *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases*, March 3, 1993, as amended November 2011, (*Remediation Regulations*), and the DEM Office of Waste Management *Guidelines on Beneficial Use Determinations ("BUDs") for Source Segregated Solid Waste*, effective date March 1, 2007.

### II. Sample Locations

Samples were collected from a stockpile of spent foundry sand staged at Cumberland Foundry. Spent foundry sand samples were collected from multiple locations and depths (greater than 6 inches) of the stockpile, which were then mixed in new re-sealable plastic bags to obtain three (3) composite samples.

### III. Sampling Equipment

Stainless steel trowel/auger/scoop, water/wipes, sample containers/labels, nitrile gloves, and Chain of Custody form.

### III. Sampling Procedures

Samples were collected using a strategy to obtain representative samples in accordance with United States Environmental Protection Agency (USEPA) *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (SW- 846)*.

The three (3) composite samples were containerized in 32-ounce glass wide-mouth jars with plastic screw top lids and Teflon liners. The samples were marked with the date and time of sampling including a unique identification name on labels affixed to the glass sample jars. No preservatives were required for the samples. The sample were placed on ice in a cooler for transport to Eurofins Test America of North Canton, Ohio for analysis.

Typically, specialized sampling quality control procedures are used to document the accuracy and precision of sampling. However due to the nature of this activity, the following sample collection was not required: trip blanks, field blanks, field duplicates, and field spikes.

**IV. Sample Identification**

Sample ID	Sample Location	Date	Generator Name	Method
CF-FSP-01	Stockpile	10/10/2019	Cumberland Foundry	VOCs (Method 8260), SVOCs (Method 8270D), Organochlorine Pesticides (Method 8081A), PCBs (Method 8082A), Total Metals (Methods 6010B and 7174A), and General Chemistry (Methods 7196A, 9012A, and Moisture)
CF-FSP-02				
CF-FSP-03				

VOCs – Volatile Organic Compounds  
 SVOCs – Semi-volatile Organic Compounds  
 PCBs – Polychlorinated Biphenyls

**V. Laboratory Analysis**

The samples were submitted for laboratory analysis of the *Remediation Regulations, Table 1 Direct Exposure Criteria* for soil.

Copies of the laboratory analysis and Chain of Custody are be presented in **Appendix E** of the BUD Application.

**VI. Results Evaluation**

The sample concentrations were compared to the *Remediation Regulations, Table 1 Direct Exposure Criteria* for soil. No parameters were detected in concentrations greater than respective Table 1 Direct Exposure Criteria.

## **VII. Annual Sampling**

The spent foundry sand will be sampled whenever a change in the foundry process is expected to increase the level of a potential pollutant in the spent foundry sand or when a change in the foundry process is expected to add a new potential pollutant to the spent foundry sand.

## **VIII. Recordkeeping**

The following information will be retained for recordkeeping purposes for the period of five (5) years by Cumberland Foundry:

- Name/Address/Contact information of User(s).
- Volume of spent foundry sand beneficially used.
- Location of beneficial use of spent foundry sand.
- SAP as well as details/dates of sampling and corresponding analysis reports.

## APPENDIX G

Effective Date: March 31, 2017  
Expiration Date: March 31, 2022

**OHIO ENVIRONMENTAL PROTECTION AGENCY**

**GENERAL PERMIT AUTHORIZATION TO BENEFICIALLY USE FOUNDRY SAND FROM IRON, STEEL AND ALUMINUM FOUNDRIES FOR ROAD CONSTRUCTION SUB-BASE, AS A COMPONENT IN STRUCTURAL FILL, AND AS PIPE BEDDING**

Upon receipt of written notification from the Director of the Ohio Environmental Protection Agency (Director) that coverage is granted, the Applicant, as defined in Section B of this Permit, is authorized by the Director to beneficially use foundry sand in accordance with the conditions specified in this Permit and applicable provisions of Ohio Administrative Code (OAC) Chapter 3745-599. Only foundry sand as defined in Section B of this Permit and as identified in the Applicant's Notice of Intent (NOI) is authorized under this Permit for beneficial use by placement on land for road construction sub-base, as a component in structural fill, and as pipe bedding. All other beneficial uses of foundry sand must be separately approved by the Director.

Foundry sand is an industrial byproduct generated by the metal-casting industry. Foundry sand generated by iron (gray and ductile), steel, and aluminum foundries using silica sand with chemical or clay binders can be beneficially used for road construction sub-base, as a component in structural fill, and as pipe bedding.

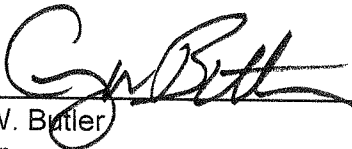

Coverage under this Permit may be authorized only upon payment of applicable fees and the submittal of a complete and accurate NOI, a sampling plan, and an analysis demonstrating the foundry sand is eligible for beneficial use under this Permit. Permit coverage does not become effective until the Permittee receives written notification from the Director that coverage is authorized.

Coverage under this Permit shall expire at midnight on this Permit's expiration date. A Permittee may continue activities authorized by this Permit beyond the date of expiration, only as provided in OAC Rule 3745-599-220(G).

Pursuant to the authority of the Director under Ohio Revised Code (ORC) Chapters 6111 and 3734 and OAC Chapter 3745-599, any coverage granted under this Permit is subject to compliance with applicable provisions of OAC Chapter 3745-599 and all terms and conditions contained within this Permit. The Permittee's beneficial use of foundry sand in accordance with this Permit and in compliance with OAC Chapter 3745-599 and other applicable laws is unlikely to adversely impact the public health or safety or the environment.

Coverage under this Permit does not relieve the Permittee of the duty to comply with all applicable federal, state, and local laws, ordinances, and regulations. Nothing herein shall be construed to release any person, including but not limited to the owner(s) of the land upon which the foundry sand is placed, from the obligation to comply with all applicable laws governing the placement or use of the foundry sand on the property.

Ohio EPA MAR 31 '17  
Entered Directors Journal

Craig W. Butler  
Director

I certify this to be a true and accurate copy of the official documents as filed in the records of the Ohio Environmental Protection Agency.

By:  Date: 3-31-17

## A. Description and Eligibility Requirements

1. This Permit authorizes the beneficial use of foundry sand by placement on the land for road construction sub-base, as a component in structural fill, and as pipe bedding.
2. Only foundry sand that meets all of the following criteria is eligible for beneficial use under this Permit:
  - a. The material conforms to the definition of "foundry sand" in Section B of this Permit;
  - b. The material does not contain constituents that exceed any of the limits specified in Table 1 of this Permit (Table 1);
  - c. The material is not a hazardous waste as defined by ORC Chapter 3734.01, OAC Rule 3745-50-10(A), and OAC Rule 3745-51-03.
3. For the purposes of this Permit, foundry sand that satisfies the constituent concentration limits set forth in Table 1 of this Permit is a beneficial use byproduct as defined in OAC Rule 3745-599-02(B)(2).
4. An applicant may apply for another General Permit in accordance with OAC Rule 3745-599-200 or an individual beneficial use permit in accordance with OAC Rule 3745-599-310 for beneficial use of foundry sand not eligible for coverage under this General Permit.

## B. Definitions

OAC Rule 3745-599-02 contains definitions applicable to the Beneficial Use Rules (OAC Chapter 3745-599) and this Permit. The following definitions are specific to this Permit.

"Applicant" means the person applying for coverage under this Permit.

"Chemical binder" means bonding agents in core sand and molding sand. Chemical binders include Alkyd Oil, Acrylic/Epoxy/SO<sub>2</sub>, Furan Hotbox, Furan Nobake, Furan/SO<sub>2</sub>, Furan Warmbox, Phenolic Baking, Phenolic Ester Nobake, Phenolic Ester Coldbox, Phenolic CO<sub>2</sub>, Phenolic Hotbox, Phenolic Nobake-Acid Catalyzed, Phenolic Novolac Flake-Resin Coated Sand, Phenolic Urethane, Phenolic Urethane Coldbox, and sodium silicate. Chemical binders are typically used when it is important for the sand to maintain strength during handling and pouring, but have the ability to collapse once the casing has solidified.

"Clay binder" is either bentonite clay (montmorillonite) or fireclay (kaolinite) that is used as a bonding agent for green sand in the metal casting industry. Green sands typically contain five percent to twelve percent clay binder based on the weight of the sand.

"Foundry sand" means silica sand and binders from sand molds and cores that have been through the production process from foundries that use iron (gray and ductile), steel, and aluminum metals, and either can no longer be reused to cast products, or are in excess of the existing sand system storage capacity.

"Notice of Intent" (NOI) means the form prescribed by the Director for use when requesting coverage under a beneficial use general permit.

“Permittee” means an applicant for whom the Director has approved coverage under this Permit.

“Pipe Bedding” means an aggregate material placed under and around pipes to provide equal support along the length of pipe installed underground in a trench.

“Structural fill” means a screened material used to create a stable base meeting engineering specifications for use as engineered fill, mechanically stabilized earthen (MSE) walls, or earthen mounds, or road base. Structural fill does not include material used for filling limestone or sandstone quarries, gravel pits, valleys, open pits or other industrial mineral mining excavations.

### C. Application Requirements

1. Prior to submission of an NOI, the Applicant shall develop and implement a sampling plan in accordance with Section C.4, determine the concentration of the constituents listed in Table 1 (results of sampling analysis), and perform a statistical evaluation of the sampling analysis, for the foundry sand from each generator from which the Applicant intends to obtain foundry sand for beneficial use under this Permit.
2. To obtain coverage under this Permit, an Applicant shall, in accordance with OAC Rule 3745-599-210, submit an application package to the Director containing the following:
  - a. One copy of a complete and accurate NOI on a form provided by the Director. Each NOI form shall be signed by the Applicant;
  - b. The sampling plan developed and implemented in accordance with Section C.4 for the foundry sand from each generator from which the Applicant intends to obtain foundry sand for beneficial use under this Permit;
  - c. The results of the sampling analysis and the statistical evaluation of the sampling analysis performed in accordance with the sampling plan for the foundry sand from each generator from which the Applicant intends to obtain foundry sand for beneficial use under this Permit; and
  - d. The application fee of \$200.
3. The application package shall be submitted to the following address:

Ohio Environmental Protection Agency  
Division of Materials and Waste Management  
Attn: Beneficial Use Unit  
P.O. Box 1049  
Columbus, Ohio 43216-1049
4. The sampling plan at a minimum shall contain the following requirements:
  - a. Samples of the foundry sand from each generator shall be collected using a strategy to obtain representative samples as described in *Test Methods for Evaluating Solid Waste*,

*Physical/Chemical Methods* (SW 846)<sup>1</sup>. The samples from each generator shall be separately analyzed.

- b. Each sample shall be analyzed for total metals as described in SW 846, for the constituents listed in Table 1.
- c. Each sample shall be analyzed for leaching potential using the Toxicity Characteristic Leaching Procedure (TCLP) Method 1311 or the Synthetic Precipitation Leaching Procedure (SPLP) Method 1312 as described in SW 846, for the constituents specified in Table 1.
- d. The sample result for each constituent shall be included in a statistical evaluation. In order to be eligible for beneficial use under this Permit, the Applicant shall demonstrate that the 95% Upper Confidence Limit (UCL) of the mean for each constituent in the foundry sand does not exceed the limits specified in Table 1.

**Table 1: Constituent Limits**

Constituent <sup>2,3</sup>	Totals Analysis (mg/kg)	Leaching Analysis (mg/L)
Aluminum (Al) <sup>4</sup>	77000	4.0
Antimony (Sb)	31	0.12
Barium (Ba)	15000	40
Cadmium (Cd)	39	0.1
Copper (Cu)	1500	26
Iron (Fe)	55000	6.0
Lead (Pb)	300	0.3
Selenium (Se)	100	0.2
Zinc (Zn)	2800	100

- 5. Coverage under this Permit becomes effective when the Applicant receives written notification from the Director that coverage is granted. The Permittee shall conduct all activities authorized by this Permit in accordance with this Permit, the NOI, and OAC Chapter 3745-599.

**D. Operating Conditions**

- 1. When there is a change in the generating process, the Permittee shall determine constituent concentrations listed in Table 1 through additional sampling and analysis, performed in

<sup>1</sup> EPA publication SW-846, "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (SW-846)," as amended through July 2016.

<sup>2</sup> Al, Sb, Ba, Fe: US EPA Regional Screening Levels, Residential Soil; Cd, Cu, Pb, Se, Zn: US EPA 40 Code of Federal Regulations Part 503 Pollutant Concentrations (Table 3 of 503.13).

<sup>3</sup> Al, Sb, Ba, Cd, Cu, Fe, Pb, Zn: TCLP Analysis limits for beneficial use of foundry sand are 20 times the drinking water standard (Maximum Contaminant Levels (MCLs) or Secondary MCLs); Se is 5 times the drinking water standard.

accordance with the sampling plan developed pursuant to section C.4. of this Permit, and demonstrate through a statistical evaluation that the 95% UCL of the mean for each constituent does not exceed the limits specified in Table 1.

2. The Permittee shall cease beneficial use of the foundry sand pursuant to this Permit if it is determined that the concentrations of constituents in the foundry sand exceed the limits for any of the constituents listed in Table 1.
3. After coverage under this Permit is granted, the Permittee shall provide to the Director an NOI and analytical results of the foundry sand for any additional generators from which foundry sand is to be obtained for beneficial use.
4. The Permittee shall retain the following information for a minimum of five years after beneficial use of the foundry sand has occurred and the Permittee shall make the information available to the Director or an authorized representative of Ohio EPA upon request:
  - a. Records of the name, address, and telephone number of each generator;
  - b. The annual volume of foundry sand from each generator managed, and the volume of foundry sand from each generator actually beneficially used annually;
  - c. Records of the location(s) where the foundry sand is stored or placed on land by the Permittee;
  - d. The sampling plan detailing where and how samples of foundry sand from each generator were collected, dates that the samples were collected, and the list of constituents for which samples were analyzed;
  - e. All laboratory analyses of the constituent concentrations in the foundry sand from each generator.
5. Not later than April first of each year the Permittee shall submit to the Director an annual report. The annual report shall be sent to the following address:

Ohio Environmental Protection Agency  
Division of Materials and Waste Management  
Attn: Beneficial Use Unit  
PO Box 1049  
Columbus, OH 43216-1049

6. The annual report shall include the following information for the previous calendar year:
  - a. Volume of foundry sand beneficially used under this Permit
  - b. Volume of foundry sand stored for beneficial use under this Permit;
  - c. Sampling analyses and results of foundry sands beneficially used under this Permit.
7. The Permittee shall use Best Management Practices, as defined in OAC Rule 3745-599-02, when storing or beneficially using foundry sand pursuant to this Permit. The Best Management Practices shall include, at a minimum, the following:

- a. Storage, blending, and beneficial use locations shall be at least 300 feet from wells and surface waters used for drinking water or watering livestock;
  - b. Storage, blending, and beneficial use locations shall be at least 100 feet from other surface waters of the state as defined in ORC Section 6111.01(H);
  - c. The Permittee shall create surface diversions to catch any solids in runoff or to divert runoff away from waters of the state at sites where foundry sand is placed on land.
  - d. Storage, blending, and beneficial use locations shall not occur within a drinking water source protection area as defined in OAC Rule 3745-9-01;
  - e. Storage, blending, and beneficial use locations shall not be within 1000 feet of a sensitive groundwater area, such as karst terrain, a sand and gravel pit, a limestone, or sandstone quarry;
  - f. Storage, blending, and beneficial use locations shall not be in a wellhead protection area with less than ten feet of low permeable clayey glacial till, or a one hundred gallon-per-minute aquifer with less than ten feet of low permeable clayey glacial till;
  - g. The Permittee shall take measures to control fugitive dust and other air emissions that may result from activities authorized through this Permit.
8. The Permittee shall store and beneficially use foundry sand pursuant to this Permit in such a manner that the activities will neither cause a nuisance nor adversely affect public health, safety or the environment. The Director may revoke coverage under this Permit if the Director determines that a nuisance condition or a threat to human health, safety or the environment exists. Immediately upon the effective date of any written notification from the Director of revocation of coverage under this Permit, the Permittee shall cease beneficial use under this Permit. The Director may require the Permittee to remove the material, remediate the site, or to take other action as appropriate to eliminate the nuisance or threat.
  9. The Permittee shall conduct all activities in compliance with all applicable local, state, and federal laws and regulations pertaining to environmental protection, including but not limited to the control of air pollution, leachate, and storm water run-on and run-off and protection of ground water and surface water.
  10. The Permittee shall conduct all activities in compliance with all other applicable local, state, and federal laws and regulations not explicitly identified in this Permit.
  11. The Permittee shall not cause pollution or cause to be placed any foundry sand that has been or is intended to be beneficially used by placement on the land for road construction sub-base, as a component in structural fill, or as pipe bedding in a location where it causes pollution to waters of the state, except in accordance with an effective National Pollutant Discharge Elimination System (NPDES) permit. Any unauthorized discharge to waters of the state must be reported to Ohio EPA (call 1-800-282-9378) within twenty-four (24) hours of discovery.
  12. The Permittee shall furnish to the Director or an authorized representative of Ohio EPA, within 30 days of receiving a written request, any information that the Director or an authorized representative of Ohio EPA requests to determine whether cause exists for revoking coverage under or determining compliance with this Permit.

13. When the Permittee becomes aware that relevant facts were omitted or that incorrect information was included in the NOI to the Director, the Permittee shall promptly submit such facts or correct information.
14. The Permittee shall comply with OAC Rules 3745-599-05 (general exclusions), 3745-599-20 (prohibitions), 3745-599-25 (signatures), 3745-599-35 (legitimacy criteria), 3745-599-60 (approved sampling and characterization procedures), 3745-599-210 (notice of intent to obtain coverage under a general beneficial use permit), and 3745-599-220 (coverage under a general beneficial use permit). If there is a conflict between a requirement in a rule and a condition of this Permit that cannot be reconciled, the Permittee shall notify the Director in writing of the conflict and shall comply with the Permit condition unless directed otherwise by the Director.

#### **E. Site Access**

The Permittee shall allow the Director or an authorized representative of Ohio EPA to:

1. Enter upon the site where a regulated facility or activity is located or conducted or where records are retained by the Permittee under OAC Chapter 3745-599 or the terms and conditions of this Permit.
2. Have access to and copy any records that must be kept under OAC Chapter 3745-599 or the terms and conditions of this Permit.
3. Collect samples, take photographs, perform measurements, surveys and other tests, and inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under OAC Chapter 3745-599 or this Permit.
