On behalf of National Grid, the following summarizes response actions to be performed at the above-referenced site during the timeframe from December 10 to 14, 2012.

### SITE ACTIVITIES TO BE PERFORMED

- Complete site observation walk.
- Continued mobilization of Contractor equipment to the Site associated with the electrical substation project.
- Begin earthwork associated with the proposed electrical substation upgrades.

Air monitoring will be performed during the earthwork activities as described in GZA's February 20, 2012 *Evaluation of Applicability of Air Pollution Control Regulation No. 9* submittal to the RIDEM Office of Air Resources and GZA's subsequent correspondence with RIDEM dated June 14, 2012 and July 27, 2012. On July 5, 2012, RIDEM issued a letter stating that an air permit for these proposed earthwork activities would not be required. A summary memorandum of the air quality monitoring program which will be implemented during earthwork activities associated with the upcoming electrical substation upgrade project was submitted to RIDEM on September 28, 2012.

Replacement of the meter building associated with natural gas regulator station is ongoing and is expected to be completed in December 2012. This work consists of aboveground work and will not involve soil excavation.
