Re: Short Term Response Action (*STRA*) Closure Report
121 Terminal Road / 642 Allens Avenue
Field Point Liquefaction Project (FPLP)
Providence, Rhode Island
RIDEM Case No. 98-004 / Site Remediation File No. SR-28-1152
FERC Docket No. CP16-121-000

Dear Mr. Martella:

On behalf of National Grid LNG, LLC (National Grid), GZA GeoEnvironmental, Inc. (GZA) is pleased to present to the Rhode Island Department of Environmental Management (RIDEM) the attached *Short Term Response Action (STRA) Closure Report* for the Fields Point Liquefaction Project (FPLP) at the Former Manufactured Gas Plant (MGP) Facility in Providence, Rhode Island (herein referred to as the "Site") located at 121 Terminal Road / 642 Allens Avenue. The remedial actions described in the attached report were conducted in accordance with the Short-Term Response Action Plan (*STRAP*) – Fields Point Liquefaction Project dated May 12, 2017, and *STRAP* Addendum –Liquefaction Project dated October 11, 2017, and applicable provisions of the RIDEM Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (Remediation Regulations, 250-RIRC-140-30-1, as refiled in January 2022). The *STRAP* was approved by RIDEM via issuance of a Short-Term Response Action Approval Letter dated October 27, 2017.

This *STRAP* was implemented to address impacted soils associated with the construction of the Liquefaction Facility for the Providence Liquefied Natural Gas (LNG) facility at the Site. As described in the attached report, the Short Term Response Action (*STRA)* work was performed between January 28, 2019 and August 24, 2022, and included installing sediment and erosion controls, limited clearing and grubbing, testing and import of clean fill materials, grading and off-Site disposal/recycling of excess materials, management of excess soil and groundwater during earthwork activities for pile and utility installations (water, drainage, natural gas and both overhead and underground electric), installation of engineered caps, and restoration activities (fencing and gate installation).

We understand that the attached *STRA Closure Report* will be posted on the RIDEM Office of Land Revitalization and Sustainable Materials Management (OLRSMM) website for the 642 Allens Avenue property, consistent with the approved Public Involvement Plan (PIP) for the Site.

An Equal Opportunity Employer M/F/V/H

Should you have any questions or comments regarding the information presented herein or in the attached, please do not hesitate to contact the undersigned or Drew Shelby (National Grid) at (508) 243-3962.

Very truly yours,

GZA GEOENVIRONMENTAL, INC.

1.0 INTRODUCTION

On behalf of National Grid LNG, LLC (National Grid), GZA GeoEnvironmental, Inc. (GZA) is pleased to present to the Rhode Island Department of Environmental Management (RIDEM) this *Short-Term Response Action (STRA) Closure Report – Fields Point Liquefaction Project* (FPLP) for the former 121 Terminal Road/ 642 Allens Avenue Manufactured Gas Plant (MGP) located in Providence, Rhode Island (herein referred to as the "Site"). **Figure 1** presents a *Locus Map*. The remedial actions described in this report were conducted in accordance with the *Short-Term Response Action Plan (STRAP) – Fields Point Liquefaction Project* dated May 12, 2017, and *STRAP Addendum –Liquefaction Project* dated October 11, 2017, and applicable provisions of the RIDEM *Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases* (Remediation Regulations, 250-RIRC-140-30-1, as refiled in January 2022). The *STRAP* was approved by RIDEM via issuance of a *Short-Term Response Action Approval Letter* dated October 27, 2017.

This *STRA Closure Report* was prepared in general accordance with Rules 1.7.9 and 1.7.10 of the Remediation Regulations and is subject to the Limitations provided in **Appendix A** and modification if subsequent information is developed by GZA or any other party.

1.1 PROJECT OBJECTIVES

As described in the *STRAP,* this work was performed to address certain environmental conditions consistent with the Remediation regulations in the area surrounding the Liquefaction Facility for the Liquefied Natural Gas (LNG) facility at the Site. The limits of work associated with the FPLP Work Area are presented on **Figure 2** as the "*Project Work Area*" and the limits of soil and groundwater disturbance subject to the *STRAP* are presented as the "*STRA* Area". Only non-intrusive work (for example, above ground piping and conduit) was completed for the portion of the Project Work Area that is outside the STRA Area. **Figure 2** also depicts the location of existing buildings, roads, landscaped areas, and approximate property boundaries based on tax map information at the Site.

These remedial actions were performed between January 28, 2019 and August 24, 2022 and included installing sediment and erosion controls, limited clearing and grubbing, testing and import of clean fill materials, grading and off-Site disposal/recycling of excess materials, management of excess soil and groundwater during earthwork activities for pile installations and utility installations (water, drainage, natural gas and both overhead and underground electric), installation of engineered caps, and restoration activities (fencing and gate installation). All areas of soil and groundwater disturbance have been capped as described herein to mitigate potential direct exposure to underlying impacted soils consistent with RIDEM requirements. The installation of engineered caps included stormwater management via a forebay and lined sand filter with discharge of stormwater to the Providence River. The stormwater management system was approved by the RIDEM Office of Water Resources through issuance of a Water Quality Certification (WQC) 16-069, dated November 21, 2018. As described herein, stormwater is not infiltrated on-Site in accordance with the STRAP.

Photographs of the Short Term Response Action (*STRA)* activities are included in **Appendix B**.

2.0 BACKGROUND

The following sections present a summary of relevant background information for the Site, with focus on the *STRA* Area, including relevant historical operations, regulatory history, and status of the RIDEM-listed Site.

2.1 SITE DESCRIPTION

The Site is located at 642 Allens Avenue in the southeastern portion of the City of Providence, Rhode Island and is identified as Assessor's Plat (A.P.) 56, Lots 5, 273, 316 and 317, and A.P. 101, Lot 1. The Site consists of approximately 42 acres with frontage on Allens Avenue to the west and bounded to the east by the Providence River. It is adjoined to the northwest by Triton Terminaling, and to the south by Terminal Road, the Glen Falls Lehigh Cement Co., and New England Petroleum Terminal Corporation. Current Site operations include natural gas regulation and distribution, gas construction storage, liquefied natural gas (LNG) storage and distribution, natural gas liquefaction, and cement storage and distribution. The entirety of the Site is currently owned by The Narragansett Electric Company (TNEC) d/b/a Rhode Island Energy (RI Energy). NG LNG, LLC holds a lease on A.P. 56 Lot 316 and Holcim US, Inc. (Holcim) holds a lease on A.P. 56 Lot 273. The table below presents a summary of current Site use:

A.P.	Lot	Current Owner	Address	Current Use(s)
101	1	TNEC	642 Allens Avenue	Natural Gas Construction Storage Natural Gas Regulation and Distribution
56	5	TNEC	642 Allens Avenue	Natural Gas Construction Storage Natural Gas Regulation and Distribution
56	273	TNEC	139 Terminal Road	Cement Storage and Distribution
56	316	TNEC	121 Terminal Road	LNG Storage and Natural Gas Liquefaction Facility
56	317	TNEC	121 Terminal Road	Access Road

Site topography is generally level with gentle slopes towards the Providence River, with the exception of the raised liquefaction facility. Based on several rounds of investigations performed at the Site, subsurface conditions generally consist of urban fill underlain by organic silt, glacial outwash, and glacial till. The depth to bedrock is generally more than 150 feet below ground surface (bgs). Groundwater is generally encountered within the fill unit, is classified as GB or not suitable for drinking water use without treatment and flows towards the tidally influenced Providence River.

As presented on **Figure 2**, *Overall Aerial Plan*, the Project Work Area consists of approximately 9.21 acres on the eastern portion of the Site and is located on A.P. 56 Lots 5 and 316. Approximately half of the Project Work Area is utilized as an existing LNG storage and distribution facility and the other half of the Project Work Area is currently vacant. The *STRA* Area (limits of soil and groundwater disturbance associated with the Project) is approximately 4.9 acres. Only non-intrusive work was performed for the portion of the Project Work Area that is outside the *STRA* Area.

A United States Army rifle range operated at the Site in the late 1800s, prior to the use of the Site as a Manufactured Gas Plant (MGP). From 1910 until 1954, an MGP operated at the Site producing coal gas, carbureted water gas, and high-BTU oil gas. MGP by-products were routinely managed through recovery, storage, recycling, reprocessing, and resale. Such by-products included coke, coal tar, ammonia, toluene, and benzene. B.P. Clapp operated an ammonia works at the 642 Allens Avenue property beginning in 1910 and managed the recycling and sale of ammonia by products. The United States Government operated a toluene facility at the Site for a brief period of time during 1918. By 1954, coal gasification operations at the Site had ceased. From 1952 until the 1960s, a liquefied petroleum gas distribution plant operated on the Site. Gulf Oil had a facility at the Site to store kerosene from 1957 to 1971. The southeastern portion of the Site has been utilized for cement storage and distribution since 1961. Propane storage and distribution occurred at the Site from the 1960s to the 1980s for peak shaving purposes. The LNG storage and distribution facility has operated on the eastern and southeastern portions of the Site since the early 1970s.

2.2 SITE REGULATORY HISTORY

RIDEM issued a Letter of Responsibility (LOR) dated February 13th, 1998, to Providence Gas Company. The Site was listed as State Site #98-004 (RIDEM File No. SR-28-1152) following the issuance of the LOR. The Site was listed with RIDEM due to soil and groundwater impacts at concentrations in excess of Method 1 Standards as defined in the Remediation Regulations. Investigation activities have been conducted at the Site in numerous phases since 1994 and have been documented in reports submitted to RIDEM. Constituents detected include, total petroleum hydrocarbons (TPH), cyanide, polynuclear aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and certain inorganic compounds (primarily arsenic and lead). Sporadic observations of light non-aqueous phase liquids (LNAPL) have been made in specific Site monitoring wells.

Remedial activities have been completed at the Site between 1995 and 2017 under the authority of RIDEM, including remedial activities in the *STRA* Area. On September 6, 2016, RIDEM requested a formal proposal for development of a Public Involvement Plan (PIP). GZA, on behalf of TNEC, submitted the PIP to RIDEM on October 28, 2016; a revised version of the PIP was submitted on May 4, 2017, and June 9, 2017. Consistent with Rule 7.07E of the Remediation Regulations, the PIP was prepared to address relevant and applicable requirements of Rules 6.06 and 7.07 A, B, C and D of the Remediation Regulations. Per Rule 1.7.6 (Public Involvement), the PIP addresses the following primary elements: 1) Public Notice, 2) Fact Sheets and Enhanced Communication, 3) Community Meetings, and 4) Information Repositories. Further information relative to compliance with the PIP is presented in Section 2.4

2.3 PERMITS AND OTHER APPROVALS

The *STRAP* was implemented consistent with the following approvals:

- RIDEM Office of Air Emissions General Permit for Emergency Generator (GPEG-279) October 21, 2016
- RIDEM Office of Waste Management, *STRAP* Approval, dated October 27, 2017
- Coastal Resources Management Council Coastal Zone Management Federal Consistency Determination Letter, dated December 30, 2017
- Federal Energy Review Commission (FERC) order, dated October 17, 2018
- RIDEM Office of Water Resources:
    - Water Quality Certification (WQC) 16-069, dated November 21, 2018
    - Rhode Island Pollutant Discharge Elimination System (RIPDES) Construction General Permit (CGP), dated November 21, 2018

Copies of these permits and approvals are included in **Appendix C**.

2.4 PUBLIC MEETINGS AND PIP REQUIREMENTS

A final PIP was issued to RIDEM June 9, 2017. Per Rule 1.7.6 (Public Involvement), the project included public notification and meetings. Public meetings were held on July 13, 2017, and August 9, 2017. Invitations with information were mailed to all abutters (owners, leasers, and easement holders), the City of Providence, and other invitees including RIDEM and CRMC officials, other interested parties.

The public meetings had language interpretation services available as well as material available in multiple languages as requested. A stenographer was present during public meetings. Attendees were provided with project fact sheets, presentations, and an opportunity for their questions to be addressed. After the public meetings, RIDEM issued a comment letter dated October 6, 2017. On behalf of TNEC, GZA submitted a STRAP Addendum letter dated October 11. 2017, to address public comments to the STRAP.

Per the June 9, 2017, PIP TNEC will provide notice in the form of letters that the STRA activities are complete. TNEC has established a mailing list for the Site. The list includes, abutting property owners, tenants, easement holders, the City of Providence, and the petitioners from the September 6, 2016, Public Involvement Plan Process Initiation Letter. In addition, an electronic copy of the Closure Report will be submitted to the public repository and to RIDEM for posting on the RIDEM website.

3.0 STRA Activities

3.1 CONSTRUCTION SUMMARY

Consistent with the RIDEM-approved *STRAP*, the construction activities for the Fields Point Liquefaction Project included installing sediment and erosion controls, limited clearing and grubbing, testing and import of clean fill materials, grading and off-Site disposal/recycling of excess materials, management of excess soil and groundwater during earthwork activities for pile installations and utility installations (water, drainage, natural gas and both overhead and underground electric), installation of engineered caps and restoration activities (fencing and gate installation). An engineered cap was constructed over all areas of soil and groundwater disturbance to mitigate the potential for direct exposure to underlying impacted soils consistent with RIDEM requirements. The stormwater runoff generated from the new impervious areas in the *STRA* Area is managed via a forebay and lined sand filter system designed in accordance with the *Rhode Island Stormwater Design and Installation Standards Manual* (RISDISM). No infiltration into Site soils was proposed under the *STRAP*.

Kiewit Power Constructors Inc. (Kiewit) performed the majority of the construction activities described herein. GZA personnel were on-Site throughout construction to monitor compliance with the *STRAP* and other permits/approvals.

Construction activities were completed by August 24, 2022, with the as-built survey completed in October 2022. Replacement of monitoring wells within the Project area was completed in February 2023.

The following attached figures were prepared to illustrate the completed *STRA* activities:

- **Figure 4** – *Exploration Location Plan;*
- **Figure 5** – *Remedial Cap Final Grading Plan;*
- **Figure 6** –*Installed Utilities and Stormwater Management Plan;* and
- **Figure 7** – *Remedial Cap Details.*

The engineered caps include asphalt, riprap, concrete, crushed stone, and a sand filter. Further information on each engineered cap is presented in Section 3.7. The limits of each of these engineered caps is depicted on **Figure 5** and details showing cross sections of each cap type are provided on **Figure 7**.

GZA personnel performed a Quality Assurance/Quality Control (QA/QC) survey during cap installation to ensure appropriate cap thicknesses were installed. Kiewit performed a survey of the final grade of the *STRA* Area. Details of the final grade are depicted on the stamped as-built figures included in **Appendix D**.

3.2 PROJECT OVERSIGHT, CONTRACTOR LIST AND EQUIPMENT UTILIZED

A representative of GZA was present on-Site full time during the *STRA* work. GZA monitored and documented construction activities to ensure that the engineered caps and stormwater systems were constructed consistent with the design plans/specifications, the RIDEM-approved *STRAP,* and all relevant permits and approvals. In addition, GZA performed perimeter air monitoring during all intrusive activities. The results of the perimeter air monitoring are described in Section 3.13.

As indicated above, Kiewit was the primary construction contractor for the *STRA* remedial work. Project subcontractors included:

- JR Vinagro Corporation of Johnston, Rhode Island (ABC Disposal);
- Clean Harbors Environmental Services, Inc. (CHES) of Portland, Maine (Water Disposal);
- Environmental Soil Management Inc. (ESMI)/Clean Earth of Louden, New Hampshire (Soil Disposal);
- New England Liner Systems of Plantsville, Connecticut (Sand Filter Liner Installation);
- Iannuccillo and Sons of Providence, Rhode Island (Utility Earthwork);
- Badger of Brownsburg, Indiana (Vacuum Excavation);
- Bond of Medford, Massachusetts (Former Gas Holder foundation evaluation); and
- IPC Lydon of Avon, Massachusetts (Mechanical Services).

Major construction equipment utilized during this work included excavators, loaders, backhoes, dump trucks, forklifts, vibratory plate compactors, vibratory rollers, pavers, vacuum trucks, and hand equipment.

3.3 IMPORT MATERIAL CHARACTERIZATION

Dense grade, various sizes of crushed stone, bedding sand, and C-33 sand were imported to the Site as part of the *STRA* activities.

Prior to the import of engineered soil materials (i.e., bedding sand, C-33 sand, and 0.75" and 1.5" dense grade), GZA collected representative material samples and submitted the samples for analytical testing. Consistent with the *STRAP*, the frequency of sampling and testing of the bedding sand, C-33 sand, and dense grade was as follows:

Analyte	EPA Test Method	Frequency
Priority Pollutant 13 Metals	6010C, 7471B	Every 2,000 CY
Volatile Organic Compounds	8260B low	Every 2,000 CY
Total Petroleum Hydrocarbons	8100M	Every 2,000 CY
Semi-Volatile Organic Compounds	8270D	Every 2,000 CY
Arsenic	6010C	Every 500 CY

GZA collected and transported all import samples under chain-of-custody protocol to ESS Laboratories in Cranston, Rhode Island for analysis. All of the import sampling results were below the RIDEM Method 1 RDEC. Analytical results as well as associated chain-of-custody forms are presented in **Appendix E**.

Prior to the import of quarry run aggregate materials (i.e., crushed stone, riprap, etc.) to the Site, Kiewit obtained and provided certification from the import facility that the aggregate was from a clean source. These certifications are included in **Appendix F**.

The following table summarizes the type, source and quantities of material imported for the project:

PJ Keating, 875 Phoenix Avenue, Cranston, RI	
Material Type	**Quantity**
1 ½ inch Dense Grade	9263.91 CY
12-24 inch Rip Rap/ Crushed Stone	198.95 CY
2-4 inch Crushed Stone	118.3 CY
¾ inch Dense Grade	27.63 CY
¾ inch Washed Crushed Stone	4051.91 CY
Bedding Sand	87.73 CY

Lorusso, 125 Tiffany Street, Attleboro, MA	
Material Type	**Quantity**
¾ inch Crushed Stone	1060.36 CY
1 ½ inch Crushed Stone	128.01 CY
2-4 inch Crushed Stone	99.6 CY
4-6 inch Crushed Stone	102.2 CY

Cardi Corporation, 400 Lincoln Avenue, Warwick, RI	
Material Type	**Quantity**
C-33 Sand	188.64 CY

3.4 SITE PREPARATION WORK

Kiewit mobilized to the Site in January 2019 and began Site preparation activities, which continued through April 2019. Site preparation included installing soil erosion and sediment controls, limited clearing, grubbing, and grading, installing temporary construction fencing, mobilizing construction trailers, storage areas and equipment.

3.4.1 Soil Management Area

Kiewit installed a Soil Management Area (SMA) consisting of a dedicated stockpile area to manage Site soils during construction. The SMA was a concrete block bin lined with polyethylene sheeting and geotextile fabric. The bin was covered by asphalt along the interior and against the concrete blocks. The asphalt pavement was sloped to allow for water collection and subsequent management. Additional information regarding soil management in the SMA is included in Section 3.9.

3.4.2 Soil Erosion and Sedimentation Control Installation

Kiewit installed and monitored the following control measures to mitigate the potential migration of sediments and dusts and to control surface water flow during construction:

- Filtrexx Soxx compost filter tubes were installed along the perimeter of the STRA area and around catch basins;
- Silt sacks were installed in catch basins within the STRA area;
- A stone tracking pad was installed at the construction entrance to the STRA Area. The tracking pad was approximately 20-feet wide and 50-feet long and consisted of stabilized stone layered over geotextile fabric;
- An asphalt pad surrounded by concrete blocks was installed to manage/ stockpile clean imported material;
- Site soils were stockpiled on top of concrete surface and were covered by polyethylene sheeting at the end of each workday. Soil stockpiles were also surrounded by Filtrexx Soxx; and
- Water or calcium chloride was applied as necessary for dust minimization;

Photos of these controls are included in **Appendix B**. In accordance with the RIDEM WQC/RIPDES permit, GZA developed a Soil Erosion and Sedimentation Control (SESC) plan and inspected the controls on a weekly basis and after precipitation events resulting in 0.25 inches of rain in 24-hours. Repairs were made to erosion control devices when deficiencies were noted during inspections.

3.5 SUBGRADE PREPARATION

3.5.1 Driven / Micropile Operations

Kiewit began driving concrete piles and micropiles within the *STRA* Area in April 2019 and continued driving concrete piles through May 2020. Driven concrete piles and micropiles were installed to support the future revetment, buildings, and equipment foundations. Generated water/ drill wash water from the micropile drilling operations were containerized into settling tanks/fractionation tanks, with wash water recirculated during the drilling process. Wash water that contained evidence of NAPL was not recirculated. Sediment and drill spoils from the micropile operations were transported to the SMA and were amended as needed to improve moisture content prior to off-Site transport and disposal. Equipment utilized included a Comacchio MC-22, Grout agitator, 70 T Mantis Crawler Crane, HBR 122D3H Manipulator, Casagrande C9 Drill Rig, Penndrill Silo, and 2" submersible pumps. Equipment associated with the micropile operation was demobilized in May 2020.

3.5.2 Excavation, Filling, Backfilling, and Grading

Kiewit performed several excavations during construction for building and equipment foundation work and underground utilities. Kiewit also performed excavation as needed to remove obstructions for pile driving. Vacuum excavation work was conducted within the *STRA* Area during the installation of piles and to locate underground utilities. Other excavation activities included the installation of fencing, the sand filter and associated drainage, electrical duct banks, utility trenches, and other miscellaneous construction tasks. During excavation work, Site soils were reused to the extent possible beneath the engineered cap and stockpiled in the SMA and covered with polyethylene sheeting at the end of each workday.

Kiewit raised the grade in the majority of the *STRA* Area, as illustrated by comparing **Figure 3** to **Figure 5**. Surface grades were increased by approximately 9 to 11 feet. The filling activities were performed in phases beginning in June 2019 with completion in May 2022. Fill material consisted of clean imported dense grade, which was placed and compacted in lifts. Site soils were not used as fill material as the Site soils did not meet the geotechnical specifications for the Project. GZA collected and analyzed all clean import material for comparison with the Method 1 Residential Direct Exposure Criteria (RDEC) in accordance with the *STRAP*; refer to Section 3.3. for details.

3.5.3 Concrete Foundation Construction

After the installation of piles across the *STRA* Area, construction was performed for the necessary building and equipment foundations. Concrete foundations were constructed for the east-west and north-south pipe racks, equipment foundations, Nitrogen storage tank, and LNG building facilities. Construction of the concrete foundations began in January 2020 and continued through September 2020. During foundation construction, Kiewit utilized a concrete washout to contain extra concrete material and concrete wash water. Concrete wash water was containerized in frac tanks and disposed off-Site as needed by CHES. More information on construction water management is included in Section 3.8.

3.6 STORMWATER SYSTEM INSTALLATION

Components for the stormwater system included pre-cast concrete structures and piping; including manhole structures (MH-101, MH-301, MH-302, MH-303) catch basin inlets (CBs-102-108, CB-401, CB-403), manhole structures MH-201 and MH-402 which were converted to catch basins, a sand filter and sediment forebay system, and piping sections. The layout, dimensions, and elevations of the stormwater management systems were surveyed and are depicted on **Figure 6**, *Installed Utilities and Stormwater Management Plan*. Installation work was completed in accordance with the November 2018 WQC.

Kiewit began excavation for the sediment forebay in September 2021. Kiewit placed crushed stone at the bottom of the sediment forebay to stabilize the soils and achieve the appropriate subgrade elevation. The concrete sediment forebay was poured in place.

Kiewit began the excavation for the sand filter in March 2022. The sand filter excavation was approximately 50 feet wide, 60-feet long and 5-feet deep. Kiewit spread crushed stone over the bottom of the excavation to stabilize soils and achieve the appropriate subgrade elevation. Once the dimensions of the sand filter were established, Kiewit placed geotextile fabric along the bottom of the sand filter. New England Liners installed a 60 mil Linear Low-Density Polyethylene (LLDPE) liner over the area. QA/QC testing of each roll of LLDPE liner was performed prior to delivery to the Site. New England Liners performed tensile tests and weld tests on-Site during installation. QA/QC information for the sand filter is included as **Appendix I**. New England Liners also installed a boot seal around the underdrain outlet pipe for the sand filter. Kiewit completed the sand filter by installing geotextile fabric over the LLDPE liner, followed by the pea stone underdrain system, C-33 sand, and crushed stone/riprap stabilization.

In areas where groundwater was encountered, it was pumped into an on-Site frac tank for subsequent off-Site disposal (described further below in Section 3.8). Photos of the stormwater system installation are included in **Appendix B**.

3.7 ENGINEERED CAP INSTALLATION

As part of the remedial work, an engineered cap was installed over areas disturbed by work performed by Kiewit or Kiewit's subcontractors. The RIDEM-approved engineered caps consist of asphalt cap, riprap cap, crushed stone caps, concrete cap, gravel roadway cap and a sand filter cap. Further information is detailed in the sections below. The layout of the engineered capping completed as part of the STRA activities is depicted on **Figure 5,** *Remedial Cap Final Grading Plan* as well as **Figure 7,** *Remedial Cap Details.*

Photographs depicting the installation of the engineered caps are included in **Appendix B**.

3.7.1 Asphalt Pavement Cap

The asphalt cap required a minimum lift of 4-inches of asphalt underlain by a minimum of 6-inches of processed gravel or sand. Approximately 41,088 square feet (0.94 acres) of the *STRA* Area is covered with an asphalt cap.

3.7.2 Riprap Cap

The riprap cap requires a minimum of 12-inches of imported riprap material underlain with non-woven geotextile fabric. Approximately 5,351 square feet (0.12 acres) of the *STRA* Area is covered with a riprap cap.

3.7.3 Crushed Stone Caps

The crushed stone cap without a geotextile fabric required a layer of a minimum of 6-inches of imported crushed stone underlain by at least 18 inches of processed gravel or sand. The crushed stone with a geotextile cap included 4 to 6 inches of imported crushed stone underlain with 6 to 8-inches of processed gravel or sand underlain with a non-woven geotextile. Approximately 73,333 square feet (1.68 acres) of the *STRA* Area is covered with a crushed stone cap.

3.7.4 Concrete Engineered Cap

The concrete cap required a minimum lift of 4-inches of concrete underlain by a minimum of 6-inches of processed gravel or sand. Approximately 27,275 square feet (0.63 acres) of the *STRA* Area is covered with a concrete cap.

3.7.5 Sand Filter Engineered Cap

The sand filter required a minimum of 18-inches of approved C-33 sand, underlain by geotextile fabric, 12-inches of 3/8-inch pea stone, and Linear Low-Density Polyethylene (LLDPE) liner system. Approximately 3,270 square feet (0.08 acres) of the *STRA* Area is covered by the sand filter cap.

3.8 DEWATERING AND CONSTRUCTION WATER DISPOSAL

Dewatering was required several times during the *STRA* work. All construction water created during dewatering was containerized in on-Site fractionation tanks for off-Site disposal. No construction water or dewatering fluids were infiltrated at the Site. Construction water disposal was scheduled with Clean Harbor Environmental Services (CHES) on an as-needed basis, with GZA facilitating the coordination between National Grid, their approved transporters and the receiving facilities for construction water disposal from the Site. Approximately 458,739 gallons of construction water was disposed of from the *STRA* area. National Grid, or their agent signed all manifests and bills of lading (BOLs) which can be found in **Appendix G**, *Soil Disposal Bills of Lading* and **Appendix H***, Groundwater Disposal Bills of Lading.*

Soil generated during the decontamination of the fractionation tanks process was removed from the Site with other excess Site soils by ESMI. Copies of all documentation of the off-Site disposal of these materials is included in **Appendix G**.

3.9 SOIL MANAGEMENT

Soils excavated during the *STRA* implementation were stockpiled for storage within the *STRA* Area SMA. The SMA was inspected by GZA and National Grid on a regular basis and repaired by Kiewit as needed. All soil erosion and sediment control (SESC) measures were installed and maintained in compliance with the Project SESC Plan, which included Filtrexx Soxx around the stockpile area and the stockpiles being covered by polyethylene sheeting daily. The SMA was located outside of the 200-foot Coastal Resource Management Council (CRMC) jurisdictional buffer; within the FERC-approved limits; and within the limits defined in the *STRAP* Addendum/ Approval. At the end of construction, the SMA structure materials (i.e., concrete bins, asphalt, polyethylene sheeting, geotextile) were properly disposed of by the Kiewit.

As previously indicated, excavated soil was reused to the extent possible beneath the engineered cap during STRA activities and all excess soil was transported off-Site to a licensed receiving facility. Note, site soil re-use was limited because site soils did not meet geotechnical specifications for the Project. GZA facilitated coordination between National

Grid and ESMI transporters and receiving facilities for removal of excess soil generated in the *STRA* Area. Soil was transported to ESMI/Clean Earth in Louden, New Hampshire for thermal desorption treatment/recycling. Prior to off-Site transport, representative samples were collected from the stockpiled soil and analyzed for the following, in accordance with the frequency requirements of ESMI:

Analyte	EPA Test Method
Total Metals	6010C, 6020A, 7471B
Total Volatile Organic Compounds (TVOC)	8260B
Organochloride Pesticides	8081B
Poly-Chlorinated Biphenyls (PCBs)	8082A
Total Petroleum Hydrocarbons	8100M
Chlorinated Herbicides	8151A
Semi-Volatile Organic Compounds	8270D
Conductivity	9050A
pH	9045
Flashpoint	1010
Reactive Cyanide	7.3.3.2
Reactive Sulfide	7.3.4.1
Toxicity Characteristic Leaching Procedure (TCLP)	1311, 6010C
TCLP VOCs	1311, 8260B
Total Cyanide	9014
Total Sulfur	D4239

Approximately 19,816.64 tons of soil were transported off-site to ESMI as part of the STRA work. Copies of all laboratory reports and documentation of offsite transport of these soils is included in **Appendix G**.

3.9.1 EXCESS ABC DISPOSAL

Excess Asphalt, Brick and Concrete (ABC) materials, including demolished asphalt and cement, were collected in an open top, 20 cubic yard (CY) roll off dumpster for regular disposal by J.R. Vinagro Corporation of Johnston, RI. Approximately 1800 CY of ABC materials were removed from the Site. GZA performed visual inspections daily and prior to off-Site transport to ensure only applicable materials were disposed of, including no visible Site soils within the dumpster.

3.9.2 DRUM EXPORT

Excess construction waste materials, such as oily debris created from micropile recirculation, secondary containment pads, and boom replacements, were collected in 55-gallon drums for regular disposal. Oily debris included pick-up and disposal were completed by Clean Harbor Environmental Services. A total of 52 drums were removed from the Site for off-Site disposal.

3.10 OTHER SITE RESTORATION ACTIVITIES

New fencing, gates and electrical utilities are illustrated on **Figure 6**, *Installed Utilities and Stormwater Management Plan*. Photos of the site restoration are included in **Appendix B**.

3.10.1 Fencing and Gates

A new double perimeter chain-link fence was installed in portions of the *STRA* Area to serve as security fencing around the Site. Two vehicle access gates were installed proximate to the western *STRA* Area boundary. New vapor barrier

fencing was also installed along the northern and western *STRA* Area boundaries. The construction of the vapor barrier fencing began in January 2022 and was completed in April 2022.

3.10.2 Electrical Work

A series of concrete cast conduits were installed into electrical duct bank trenches to provide the *STRA* Area with electrical utilities. Overhead electrical utilities were decommissioned throughout project phases and transitioned to the underground utilities. The duct banks, illustrated on **Figure 6**, were backfilled, and brought to final grade in accordance with the capping requirements.

3.11 MONITORING WELL DECOMMISSIONING AND REPLACEMENT

In accordance with the RIDEM-approved *STRAP*, nine (9) replacement monitoring wells were installed (GZ-311DR, GZ-313DR, GZ-315DR, GZ-318DR, RCA-3R, RCA-5R, VHB-3R, VHB-21R, and VHB-22R) as shown on the attached **Figure 4,** *Exploration Location Plan*. All nine explorations were executed via push driven Geoprobe methods. Wells GZ-311DR, GZ-313DR, GZ-315DR, GZ-318DR, RCA-3R, RCA-5R, VHB-3R, VHB-21R, and VHB-22R were installed in February 2023.

Prior to installation, GZA conducted Site reconnaissance to coordinate DigSafe® clearance and to visually evaluate access restrictions. GZA coordinated with National Grid to evaluate the locations with the layout of known utilities and other possible historical features.

All borings were in advanced of a depth of approximately 15 feet below ground surface (bgs), except for GZ-311DR, GZ-313DR, GZ-315DR, and GZ-318DR which were advanced to approximately 30 feet bgs. Borings were performed via GeoProbe drilling techniques with dedicated continuous sampling sleeves. A GZA field engineer was onsite to record boring activities, collect samples for field screening and characterization, and complete boring logs at each location. The recovered soil from each sample interval was logged using modified Burmeister classification system, field-screened for presence of total volatile organic compounds (TVOCs) with a Photoionization Detector (PID) and evaluated for the presence of staining and odors. GZA also performed photo-documentation of each soil sampling interval. As these were replacement monitoring wells, no analytical testing for soil was conducted.

The wells were constructed of 2-inch diameter Schedule 40 PVC in accordance with standards specified in Rhode Island Water Quality Regulations (https://rules.sos.ri.gov/regulations/part/250-150-05-3) to a total depth of approximately 15 feet below ground surface (bgs) (shallow wells RCA-3R, RCA-5R, VHB-3R, VHB-21R, and VHB-22R) or 30 feet bgs (deep wells GZ-311DR, GZ-313DR, GZ-315DR, and GZ-318DR). For each shallow well, the screen was set to span the natural water table encountered during drilling (typically within the fill unit or underlying sand unit – assumed to be approximately 10 to 12 feet bgs). For the deep well, the screen was set with midpoint at least 10 feet below the natural water table encountered during drilling. A sand filter pack was installed in the annular space around the well screen and extended approximately 1-foot above the well screen. An approximate 1-foot (minimum) bentonite seal was placed above the filter pack and the remaining borehole above the bentonite was backfilled with clean filter sand. Wells GZ-311DR, GZ-313DR, GZ-315DR, GZ-318DR, RCA-3R, RCA-5R, VHB-3R, VHB-21R, and VHB-22R were completed with road boxes.

3.12 HEALTH AND SAFETY AND ENVIRONMENTAL MONITORING

Prior to initiating STRA activities, GZA and Kiewit prepared written Site-specific Health and Safety (H & S) plans, which were adhered to during the work. Daily health and safety briefings were held, during which individuals working on-Site were briefed on potential health and safety related issues and required safety precautions prior to starting daily activities. The health and safety meetings covered a review of the provisions of the Site-specific H & S Plan, appropriate events or concerns, and anticipated concerns or safety measures for a component of the project.

3.13 PERIMETER AIR MONITORING RESULTS

In accordance with the RIDEM-approved *STRAP*, real time air monitoring was performed during all STRA activities utilizing six (6) Air Quality Monitoring (AQM) Stations[1] along the perimeter of the STRA area, with the following instrumentation:

- Portable Photoionization Detector (PID) MiniRAE – this instrument measured total volatile organic compounds (TVOC) with a detection limit of 1.0 parts per million (ppm). TVOC readings were measured every 10 seconds and an average was electronically logged every 3 minutes.

- DustTRAK Dust Meter – this dust meter used infrared electromagnetic radiation to sense airborne particles less than 10 microns in size. The detection limit for this instrument was 1 microgram per cubic meter (µg/m^3). Similar to the PID, readings were measured every 10 seconds and an average electronically logged every 3 minutes.

The following table presents the real-time monitoring threshold levels for the perimeter of the STRA work area.

Real-Time Perimeter STRA Work Area Action Levels	
Compound	**Perimeter of STRA Work Area**
Total Volatile Organic Compounds (TVOC)	1.0 ppm
Respirable Particulate Dust (PM_{10})	1 µg/m^3

The PID and DustTRAK Dust Meter were calibrated at the beginning of each day. Data was documented and reported to RIDEM on a weekly basis. Copies of the weekly AQM reports are included in **Appendix J**.

When an exceedance of TVOC or Particulate Dust was observed, GZA personnel on Site would investigate potential sources for the exceedance. When a cause was determined, a course of action for remediation was identified and executed. There were relatively few project related exceedances, as the majority of exceedances were determined to be a result of the *STRA* Area being located in an active port and industrial area or other non-project related occurrences. Further details on each exceedance noted can be found in **Appendix J**.

3.14 DECONTAMINATION PROTOCOL

The decontamination protocol included multiple sediment track-out pads to remove sediment from tires prior to exiting the site, highly visible locations for the storage of spill prevention and control equipment, and clearly marked designated washout areas (such as wheel washing stations, washout for concrete, paint, stucco, etc.). Additionally, during remediation efforts involving asbestos, decontamination rooms were utilized.

3.14.1 Boom Maintenance

During the entirely of the STRA work, the existing oil boom containment system located in the Sassafras Cove area of the Providence River, was inspected during every workday and maintained as needed. The boom system is approximately 600-feet in length, includes a silt curtain with perma-boom and absorbent boom sections. Regular maintenance work

[1] The Air Quality Monitoring (AQM) Program presented in the October 2017 STRAP Addendum included three (3) unmanned continuous air monitoring stations along the perimeter of the STRA area complemented by three (3) additional perimeter air monitoring locations (subject to modification based on earthwork) for the collection of handheld air monitoring readings. In January 2020, the AQM Program was revised to include a total of six (6) fixed unmanned air monitoring stations.

also included scheduled inspections (monthly basis) of outfalls #1 and #2 for sheen outbreaks and checking the status of fittings, perma-boom, and absorbent booms. Repairs or replacements occurred on an 'as-needed' basis by CHES.

4.0 Certification

To address Section 1.7.10 of the Remediation Regulations, the following certifications of completeness are provided:

GZA certifies that the information provided in this Short Term Response Action Closure Report is complete and accurate to the best of GZA's knowledge.

Margaret S. Kilpatrick, P.E.
Principal
GZA GeoEnvironmental, Inc.

Drew Shelby, representative of the National Grid LNG LLC certifies to the best of her knowledge that this Short Term Response Action Closure Report is a complete and accurate representation of the circumstances known about the release and the subsequent response activities.

6) VERTICAL DATUM IS BASED ON NAVD 1988 FROM BASE MAPPING PROVIDED BY VHB.
7) APPROXIMATE HISTORICAL STRUCTURE/EQUIPMENT LOCATIONS AND DATES WERE OBTAINED FROM THE FOLLOWING SOURCES:
   - CERTIFIED SANBORN MAPS DATED: 1950, 1956, 1972, 1977 AND 1982
   - AERIAL ORTHOPHOTOGRAPHIC IMAGES OBTAINED FROM RIGIS: 1939, 1951, 1962, 1972, 1976, 1981, 1988, 1992, 1995, 1997, 2002, 2008
   - SITE PLANS PROVIDED BY RESOURCE CONTROLS ASSOCIATES (RCA) IN THE RIDEM-SUBMITTED JULY 5, 1994 "SITE CHARACTERIZATION PLAN" PREPARED ON BEHALF OF THE PROVIDENCE GAS COMPANY. PLANS PROVIDED BY NATIONAL GRID.
   - HISTORIC SITE PLAN "GENERAL PLAN OF WORKS, PROVIDENCE GAS COMPANY. SASSAFRAS POINT PLANT, PROVIDENCE, RHODE ISLAND." UNDATED. PLANS PROVIDED BY NATIONAL GRID.
10) THE SITE HAS BEEN THE LOCATION OF NUMEROUS REMEDIAL ACTIONS. THIS PLAN SET DOES NOT PRESENT THE LOCATIONS OF ANY CONFIRMATORY SAMPLES THAT HAVE BEEN COLLECTED AT THE SITE. THIS PLAN SET MAY INCLUDE LOCATIONS THAT HAVE BEEN FULLY EXCAVATED AND THE PRESENTED EXPLORATIONS MAY NOT BE TRUE TO CURRENT CONDITIONS.
11) THIS PLAN SET DOES NOT PRESENT THE LOCATIONS OF SAMPLES THAT WERE COLLECTED FOR GEOTECHNICAL PURPOSES ONLY. THIS INCLUDES CONE PENETROMETER TESTING SAMPLES AND TEST PITS CONDUCTED WITH NO SOIL DESCRIPTIONS OR ENVIRONMENTAL SAMPLES COLLECTED. HOWEVER, THE LOCATIONS OF KNOWN GEOTECHNICAL BORINGS (PRESENTED ON PLANS PROVIDED BY NATIONAL GRID) ARE SHOWN.

APPENDIX A

LIMITATIONS

LIMITATIONS

1. This Short Term Response Action (STRA) Completion Report has been prepared on behalf of and for the exclusive use of The Narragansett Electric Company d/b/a National Grid (National Grid), solely for use in documenting the work completed as described herein at the 642 Allens Avenue Former MGP ("Site") under the applicable provisions of the State of Rhode Island Department of Environmental Management Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (Remediation Regulations). This report and the findings contained herein shall not, in whole or in part, be disseminated or conveyed to any other party, nor used by any other party in whole or in part, without the prior written consent of GZA GeoEnvironmental, Inc.(GZA) or National Grid.

2. GZA's work was performed in accordance with generally accepted practices of other consultants undertaking similar studies at the same time and in the same geographical area, and GZA observed that degree of care and skill generally exercised by other consultants under similar circumstances and conditions. GZA's findings and conclusions must be considered not as scientific certainties, but rather as our professional opinion concerning the significance of the limited data gathered during the course of the study. No other warranty, express or implied is made. Specifically, GZA does not and cannot represent that the Site contains no hazardous material, oil, or other latent condition beyond that observed by GZA during the work described herein.

3. The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based upon services performed and observations made by GZA.

4. In the event that National Grid or others authorized to use this report obtain information on environmental or hazardous waste issues at the Site not contained in this report, such information shall be brought to GZA's attention forthwith. GZA will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this report.

5. The conclusions and recommendations contained in this report are based in part upon the data obtained from environmental samples obtained from relatively widely spread subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

6. The generalized soil profile described in the text is intended to convey trends in subsurface conditions. The boundaries between strata are approximate and idealized and have been developed by interpretations of widely spaced explorations and samples; actual soil transitions are probably more gradual. For specific information, refer to the boring logs.

7. In the event this work included the collection of water level data, these readings have been made in the test pits, borings and/or observation wells at times and under conditions stated on the exploration logs. These data have been reviewed and interpretations have been made in the text of this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

8. The conclusions contained in this report are based in part upon various types of chemical data and are contingent upon their validity. These data have been reviewed and interpretations made in the report. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, these data should be reviewed by GZA and the conclusions and recommendations presented herein modified accordingly.

APPENDIX C

PERMITS AND OTHER APPROVALS

RHODE ISLAND
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
235 Promenade Street, Providence, RI 02908-5767 TDD 401-222-4462

31 October 2016

Mr. Charles Willard
National Grid LNG, LLC
280 Melrose Street
Providence, RI 02907

Dear Mr. Willard:

The Department of Environmental Management, Office of Air Resources has reviewed and approved your General Permit application for a natural gas-fired Emergency Generator at your site located at 121 Terminal Road, Providence, RI.

Enclosed is the General Permit issued pursuant to our review of your application (General Permit No. GPEG-279).

Be advised that on May 4, 2016, the U.S. Court of Appeals for the D.C. Circuit vacated the provisions of 40 CFR 60, Subpart JJJJ – "Standards of Performance for Stationary Spark Ignition Internal Combustion Engines", which allow emergency engines to operate for up to 100 hours for emergency demand response when the Reliability Coordinator has declared an Energy Emergency Alert Level 2 or for voltage or frequency deviations of 5 percent or greater below standard voltage or frequency. Specifically, the provisions in 40 CFR 60.4243(d)(2)(ii)-(iii) were vacated. Therefore, if you plan to operate your emergency generator to address voltage or frequency deviations or in emergency demand response, you must apply for a modification to your minor source permits to allow the units to be operated in non-emergency situations.

If there are any questions concerning this permit, please contact me at 401-222-2808, extension 7028 or at aleida.whitney@dem.ri.gov.

Sincerely,

Aleida M. Whitney
Senior Air Quality Specialist
Office of Air Resources

cc: Providence Building Official

30% post-consumer fiber

STATE OF RHODE ISLAND AND PROVIDENCE PLANTATIONS
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
OFFICE OF AIR RESOURCES

GENERAL PERMIT FOR AN EMERGENCY GENERATOR

NATIONAL GRID LNG, LLC

GENERAL PERMIT NO. GPEG-279

Pursuant to the provisions of Air Pollution Control Regulation No. 9, this general permit is issued to:

National Grid LNG, LLC

For installation of the following emergency generator:

Caterpillar, 755 bHP, 500 ekW, natural gas fired emergency generator.

Model No. G3412C

Located at: *121 Terminal Road, Providence, RI*

Liquefaction Area

This general permit shall be effective from the date of its issuance and shall remain in effect until revoked by or surrendered to the Department. This general permit does not relieve *National Grid LNG, LLC* **from compliance with applicable state and federal air pollution control rules and regulations. The design, construction and operation of this equipment shall be subject to the attached permit conditions and emission limitations.**

Douglas L. McVay

Douglas L. McVay, Chief
Office of Air Resources

10/31/10

Date of Issuance

STATE OF RHODE ISLAND AND PROVIDENCE PLANTATIONS
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
OFFICE OF AIR RESOURCES

Permit Conditions and Emission Limitations

NATIONAL GRID LNG, LLC

GENERAL PERMIT NO. GPEG-279

A. Emission Limitations

1. Sulfur Dioxide

The sulfur content of any gaseous fuel burned in the emergency generator shall not exceed 10 grains total sulfur per 100 dry standard cubic feet.

2. Carbon Dioxide

The emission rate of carbon dioxide discharged to the atmosphere from the emergency generator shall not exceed 1900 lbs/MWh.

3. Visible emissions from the emergency generator shall not exceed 10% opacity except for a period or periods aggregating no more than three minutes in any one-hour. This visible emission limitation shall not apply during startup of an emergency generator. Startup shall be defined as the first ten minutes of firing following the initiation of firing.

B. Operating Requirements

1. The maximum firing rate for the emergency generator shall not exceed 5,875 cubic feet per hour.

2. The emergency generator shall not operate more than 500 hours in any 12-month period.

3. The emergency generator shall be used only during emergencies or for maintenance or testing purposes. Emergency means an electric power outage due to a failure of the electrical grid, on-site disaster, local equipment failure, or public service emergencies such as flood, fire, or natural disaster. Emergency shall also mean periods during which ISO New England, or any successor Regional Transmission Organization, directs the implementation of operating procedures for voltage reductions, voluntary load curtailments by customers or automatic or manual load shedding within Rhode Island in response to unusually low frequency, equipment overload, capacity or energy deficiency, unacceptable voltage levels or other such emergency conditions.

4. The emergency generator shall not be operated in conjunction with any voluntary demand-reduction program or any other interruptible power supply arrangement with a utility, other market participant or system operator unless such program is implemented at the same time as ISO New England, or any successor Regional Transmission Organization, directs the implementation of operating procedures for voltage reductions, voluntary load curtailments by customers or automatic or manual load shedding within Rhode Island in response to unusually low frequency, equipment overload, capacity or energy deficiency, unacceptable voltage levels or other such emergency conditions.

C. Continuous Monitoring

1. The emergency generator shall be equipped with a non-resettable elapsed time meter to indicate, in cumulative hours, the elapsed engine operating time for the unit.

D. Record Keeping and Reporting

1. The owner/operator shall, on a monthly basis, no later than 5 days after the first of each month, determine and record the hours of operation for the emergency generator for the previous 12-month period.

2. The owner/operator shall notify the Office of Air Resources, in writing, whenever the hours of operation in any 12-month period exceeds 500 hours for the emergency generator.

3. The owner/operator shall notify the Office of Air Resources of any anticipated noncompliance with the terms of this permit or any other applicable air pollution control rules and regulations.

4. The owner/operator shall notify the Office of Air Resources, in writing, of the date of actual start-up of the emergency generator.

5. The owner/operator shall notify the Office of Air Resources in writing of any planned physical or operational change to this emergency generator that would:

   a. Change the representation of the facility in the application.

   b. Alter the applicability of any state or federal air pollution rules or regulations.

   c. Result in the violation of any terms or conditions of this permit.

   Such notification shall include:

   - Information describing the nature of the change.

- Information describing the effect of the change on the emission of any air contaminant.

- The scheduled completion date of the planned change.

Any such change shall be consistent with the appropriate regulation and have the prior approval of the Director.

6. The owner/operator shall notify the Office of Air Resources, in writing, of any noncompliance with the terms of this permit within 30 calendar days of becoming aware of such occurrence and supply the Director with the following information:

   a. The name and location of the facility;

   b. The subject source(s) that caused the noncompliance with the permit term;

   c. The time and date of first observation of the incident of noncompliance;

   d. The cause and expected duration of the incident of noncompliance;

   e. The estimated rate of emissions (expressed in lbs/hr or lbs/day) during the incident and the operating data and calculations used in estimating the emission rate.

   f. The proposed corrective actions and schedule to correct the conditions causing the incidence of noncompliance.

7. All records required as a condition of this permit shall be maintained for a minimum of five years after the date of each record and shall be made available to representatives of the Office of Air Resources upon request.

E. Other Permit Conditions

1. To the extent consistent with the requirements of this approval and applicable Federal and State laws, the emergency generator shall be designed, constructed and operated in accordance with the representation of the equipment in the permit application.

2. Employees of the Office of Air Resources and its authorized representatives shall be allowed to enter the facility at all times for the purpose of inspecting any air pollution source, investigating any condition it believes may be causing air pollution or examining any records required to be maintained by the Office of Air Resources.

3. At all times, including periods of startup, shutdown and malfunction, the owner/operator shall, to the extent practicable, maintain and operate the emergency generator in a manner consistent with good air pollution control practice for

minimizing emissions. The general duty to minimize emissions does not require you to make any further efforts to reduce emissions if levels required by this permit have been achieved. Determination of whether acceptable operating and maintenance procedures are being used will be based on information available to the Office of Air Resources which may include, but is not limited to, monitoring results, opacity observations, review of operating and maintenance procedures and inspection of the emergency generator.

4. The owner/operator is subject to the requirements of 40 CFR 60, Subpart A (General Provisions) and Subpart JJJJ (Standards of Performance for Stationary Spark Ignition Internal Combustion Engines). Compliance with all applicable provisions therein is required.

Mr. William R. Howard
Environmental Manager
National Grid
280 Melrose Street
Providence, RI 02907

Re: Coastal Zone Management Federal Consistency Determination - National Grid LNG Liquefaction Facility – 121 Terminal Road, Providence

CRMC File No.: 2016-10-099

Dear Mr. Howard,

On October 31, 2016 National Grid (filing as National Grid LNG, LLC) filed with the Rhode Island Coastal Resources Management Council (CRMC) a federal consistency certification along with the necessary data and information for the proposed construction of a liquefied natural gas (LNG) liquefaction facility (the Project). National Grid intends to construct the Project adjacent to the existing LNG storage tank and associated vaporization plant and truck station located at 121 Terminal Road, Providence, RI. In its filing National Grid certified that "the proposed activity will be consistent with Rhode Island's federally approved Coastal Resources Management Program." A copy of National Grid's consistency certification was also filed concurrently with the Federal Energy Regulatory Commission (FERC) on November 1, 2016. See FERC Docket CP16-121.

National Grid LNG, LLC is seeking a federal license, permit or authorization from the Federal Energy Regulatory Commission (FERC) pursuant to Section 7(c) of the Natural Gas Act (U.S. Code 15 § 717). Federal actions, including the issuance of federal licenses, permits or authorizations that would have a reasonably foreseeable effect on any land or water use or natural resources of a coastal zone must be consistent with the enforceable policies of the federally approved state coastal management plan, in this case the Rhode Island Coastal Resources Management Program (CRMP). The Project is located within the first tier of Rhode Island's coastal zone, which extends 200 feet inland from a coastal feature, and within a coastal community, Providence. FERC has exclusive jurisdiction in this matter relative to the siting, construction and operation of this proposed Project in accordance with U.S. Code 15 § 717. While FERC's jurisdiction preempts state permitting of the siting of the Project, federal preemption does not remove the CRMC's federal consistency review authority for the Project pursuant to the federal Coastal Zone Management Act (CZMA), 16 USC §§ 1451-1464, and the CZMA's implementing regulations at 15 C.F.R. Part 930, Subpart D – Consistency for Activities Requiring a Federal License or Permit. Accordingly, the CRMC review is limited in this matter to the reasonably foreseeable coastal effects of the Project.

The CRMC issued a public notice for the Project on November 16, 2016 with a public comment period ending on December 23, 2016. The CRMC further extended the public comment period an additional 30 days until January 23, 2017 to accommodate further public review of this Project. The CRMC also scheduled public hearings to provide the public an opportunity to testify on the Project despite the fact that such hearings are not required, but at the discretion of the agency in accordance with 15 C.F.R. § 930.61. Based on the October 31, 2016 National Grid LNG, LLC filing date of a complete application with the CRMC, the 6-month state agency review period specified in 15 C.F.R. § 930.60 was to end on April 30, 2017. The CRMC continued to provide guidance and assistance to National Grid during this review period in accordance with 15 C.F.R. § 930.56 and additional information was provided by National Grid to supplement the CRMC file, including additional information concerning the proposed Project 25-year design life. Under the provisions of 15 C.F.R. § 930.60(b) the CRMC and National Grid mutually agreed to stay the CRMC 6-month review period until June 15, 2017. Subsequently, the CRMC and National Grid agreed to further stay the CRMC 6-month review period until October 31, 2017, and then again until December 31, 2017, and further until February 28, 2017 to allow sufficient time for National Grid to obtain other needed authorizations or permits to incorporate into the CRMC record.

CRMC staff have conducted a review of the necessary data and information filed by National Grid including the proposed 25-year design life for the Project. CRMC staff also reviewed public comments filed in this matter, and the CRMC staff report was completed and signed by staff on October 25, 2017. The CRMC has provided for public participation as required under 15 C.F.R. § 930.61 by issuing timely public notice and an opportunity for the public to provide comments. In addition, the CRMC held three public hearings in this matter on November 14 and 28, and December 12, 2017 where the Council considered the findings of the CRMC staff report, the public comments and testimony on the Project, and the materials, representations and testimony submitted by National Grid. The Council concurred with the recommendation of the CRMC Executive Director that based upon his review of the record that the Project is consistent with the applicable enforceable policies of the Rhode Island Coastal Resources Management Program.

Therefore, based on the filings with this office and the testimony of Nation Grid at the hearings that the Project has a 30-year design life and would be decommissioned after that time frame, and the further evidence presented and the representations of National Grid during the review and the Council's deliberations on this matter, the CRMC hereby concurs with the consistency certification filed by National Grid that the proposed Project with its 30-year design life is consistent with the federally approved Coastal Resources Management Program in accordance with the CZMA (16 U.S.C. § 1451 *et seq.*) and 15 C.F.R. Part 930, Subpart D - Consistency for Activities Requiring a Federal License or Permit. Any substantial changes to the proposed Project from the material presented by National Grid, or later substantial modifications to the license issued by FERC, may require a separate CZMA review by the CRMC, pursuant to the CZMA regulations at 15 C.F.R. §§ 930.51(b) and (c) or 930.66. The CRMC will file a copy of this consistency certification concurrence with the Secretary of the Federal Energy Regulatory Commission as required pursuant to 15 C.F.R. § 930.62(a).

Please contact me at 401-783-3370 or email gfugate@crmc.ri.gov should you have any questions.

Sincerely,

Grover J. Fugate, Executive Director
Coastal Resources Management Council

165 FERC ¶ 61,031
UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Before Commissioners: Kevin J. McIntyre, Chairman;
Cheryl A. LaFleur, Neil Chatterjee,
and Richard Glick.

National Grid LNG LLC Docket No. CP16-121-000

ORDER ISSUING CERTIFICATE

(Issued October 17, 2018)

1. On April 1, 2016, National Grid LNG LLC (National Grid) filed an application under section 7(c) of the Natural Gas Act (NGA)[1] and Part 157 of the Commission's regulations[2] requesting authorization to add liquefaction facilities at its existing Fields Point liquefied natural gas (LNG) storage facility in Providence, Rhode Island. Currently, natural gas to be stored at National Grid's facility must be trucked in from other facilities as LNG. The proposed Fields Point Liquefaction Project would enable customers to also transport gas as vapor by pipeline to Fields Point for liquefaction and storage.

2. For the reasons discussed below, the Commission will grant National Grid's requested certificate authorization, subject to conditions.

I. Background and Proposal

3. National Grid is a limited liability company organized under the laws of Delaware. National Grid owns and operates a 600,000-barrel of LNG (approximately 2 billion cubic feet of natural gas) capacity LNG storage facility at Fields Point on the Providence River in Providence, Rhode Island, and provides LNG storage, vaporization, and redelivery services subject to the Commission's jurisdiction. Customers currently truck LNG to the Fields Point facility for storage, and National Grid redelivers gas to those customers, most often as vapor via pipeline, and on occasion as LNG by truck. Narragansett Electric Company (Narragansett Electric)[3] pipeline facilities are used to deliver revaporized gas

[1] 15 U.S.C. § 717f(c) (2012).

[2] 18 C.F.R. pt. 157 (2018).

[3] Narragansett Electric is a local distribution company (LDC) that provides electric and gas services to retail customers in Rhode Island. Narragansett Electric has a limited *(continued ...)*

20181017-3072 FERC PDF (Unofficial) 10/17/2018

from National Grid's storage facility to Narragansett Electric's distribution system and by displacement to an Algonquin Gas Transmission, LLC (Algonquin) interstate pipeline for ultimate delivery to National Grid's storage customers. The proposed project would effectively reverse this flow by enabling Algonquin to transport gas that Narragansett Electric would deliver to Fields Point to be liquefied and stored.

4. National Grid states that two of its existing customers, Narragansett Electric and Boston Gas Company (Boston Gas),[4] requested it add liquefaction capability to enable them to deliver gas to National Grid by pipeline and thereby diversify their supply sources.[5] To accommodate this request, National Grid seeks to add a 20 million standard cubic feet per day gas pretreatment and liquefaction system. National Grid states that the proposed facilities will be located within the boundaries of its existing Fields Point site and that it does not propose to alter the capacity of its existing LNG storage tank or the location of existing cryogenic piping and vaporization equipment. Feed gas for the proposed liquefaction facilities will be delivered via Narragansett Electric's existing 12-inch-diameter pipeline.

5. National Grid states that in conjunction with its Fields Point Liquefaction Project, Narragansett Electric plans to make electric infrastructure upgrades on its system in order

---

jurisdiction blanket certificate, pursuant to section 284.224 of the Commission's regulations, to transport natural gas in interstate commerce. *Narragansett Electric,* 131 FERC ¶ 61,054 (2010).

[4] National Grid, Narragansett Electric, and Boston Gas are affiliated companies.

[5] National Grid observes that to date, "customers have relied primarily on a single source for their LNG by obtaining it from the Everett, Massachusetts import terminal." National Grid's Application at p. 6. However, "LNG has been sourced from other LNG suppliers in Canada, Pennsylvania, and New Jersey when needed." National Grid's Response to Comments on the Environmental Assessment, at p. 2 (Aug. 9, 2018). Most recently, the "ratio has been approximately 60% purchased from the Everett import terminal and 40% purchased from Quebec." *Id.* p. 6, n.15.

National Grid's customers state that "there are relatively few significant sources of LNG available for purchase in the Northeast," and add that during the 2013 refill season, they "were unable to acquire sufficient quantities of LNG to fill their storage tanks." Comments of Brooklyn Union Gas Company d/b/a National Grid NY; KeySpan Gas East Corporation d/b/a National Grid; Boston Gas and Colonial Gas Company, collectively d/b/a National Grid; Niagara Mohawk Power Corporation d/b/a National Grid; and Narragansett d/b/a National Grid (National Grid Gas Delivery Companies), at p. 4 (May 6, 2016).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

to provide a dedicated 13 megawatt 34.5 kilovolt electric service to power National Grid's proposed liquefaction equipment.[6]

II. Notice, Interventions, Comments, and Protests

6. Notice of National Grid's application was published in the *Federal Register* on April 21, 2016.[7]

7. Timely, unopposed motions to intervene were filed by Emlyn E. Addison; Sherrie Andre; Kate Aubin; Burrillville Against Spectra Expansion; Joshua C. Catone; Julian Drix; EMGIE Gas & LNG LLC; the Environmental Justice League of Rhode Island (Environmental Justice League); Christina Ergas; Maureen E. Farrell; Fighting Against Natural Gas; Nicolas Katkevich; the National Grid Gas Delivery Companies; Mary Pendergast; Gina Rodriguez; Ellen A. Tuzzolo; Marlena Von Hoffer; and Pia Ward.[8]

8. On March 27, 2018, No LNG PVD filed a late motion to intervene. National Grid filed a motion opposing the late intervention. We will grant No LNG in PVD's motion pursuant to Rule 214 of the Commission's regulations.[9]

9. Comments and/or protests were filed by individuals and other entities concerning project safety, environmental impacts, and project need. These comments are addressed in the Environmental Assessment (EA) for the project and in this order, as appropriate.

10. National Grid submitted answers in response to comments and protests. Although the Commission's Rules of Practice and Procedure do not permit answers to protests,[10]

---

[6] Although Narragansett Electric's electric upgrades are not subject to the Commission's jurisdiction, we have considered the environmental impacts of these upgrades, along with other planned or proposed projects in the vicinity of the Fields Point site, in assessing the cumulative impacts of National Grid's proposal in section 2.9 of the Environmental Assessment (EA).

[7] 81 Fed. Reg. 23,477 (April 21, 2016).

[8] Timely, unopposed motions to intervene are granted by operation of Rule 214 of the Commission's Rules of Practice and Procedures. *See* 18 C.F.R. § 385.214 (2018).

[9] 18 C.F.R. § 385.214(d) (2018). Note that in *Tennessee Gas Pipeline Co., L.L.C.*, 162 FERC ¶ 61,167, at PP 49-51 (2018), we explained that going forward, we would apply a less lenient approach in considering out-of-time motions to intervene. We do not apply this new approach here, as No LNG in PVD submitted its motion prior to issuance of the *Tennessee Gas Pipeline Co., L.L.C.* order.

[10] 18 C.F.R. § 385.213(a)(2) (2018).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

our rules also provide that we may waive this provision for good cause.[11] We will accept the answers here because they have provided information that assisted us in our decision making.

11. Neesu Wushuwunoa requests we suspend this proceeding to "work with the Mashapaug Nahaganset Tribal Trust and Nation to develop an equitable process for consultation" on this "and future projects proposed to take place in Mashapaug Nahaganset ancestral lands."[12] Although we endeavor to consult with federally-recognized Indian tribes on a government-to-government basis under our *Policy Statement on Consultation with Indian Tribes in Commission Proceedings*,[13] in this case, taking into account that the Mashapaug Nahaganset is neither a federally- nor state-recognized tribe, we have elected to review the concerns expressed by Neesu Wushuwunoa in responding to comments submitted in this proceeding.

III. Discussion

12. Since the proposed Fields Point Liquefaction Project will be used for the transportation and storage of natural gas in interstate commerce, the construction and operation of the facilities are subject to the Commission's jurisdiction under NGA sections 7(c) and (e).[14]

A. Application of the Commission's Policy Statement on New Facilities

13. The Commission evaluates gas project applications guided by its policy statement on the certification of new facilities.[15] The Certificate Policy Statement establishes criteria for determining whether there is a need for a proposed project and whether it will serve the public interest. The Certificate Policy Statement explains that in deciding whether to authorize the construction of major new natural gas facilities, the Commission balances the public benefits against the potential adverse consequences. The Commission's goal is to give appropriate consideration to the enhancement of

[11] *Id*. § 385.101(e).

[12] Neesu Wushuwunoa's Comments, at p. 2 (Dec. 8, 2017).

[13] 104 FERC ¶ 61,108 (July 23, 2003).

[14] 15 U.S.C. §§ 717f(c) and (e) (2012).

[15] *Certification of New Interstate Natural Gas Pipeline Facilities*, 88 FERC ¶ 61,227 (1999), *orders on clarification*, 90 FERC ¶ 61,128 and 92 FERC ¶ 61,094 (2000) (*Certificate Policy Statement*).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

competitive transportation alternatives, the possibility of overbuilding, subsidization by existing customers, the applicant's responsibility for unsubscribed capacity, the avoidance of unnecessary disruptions of the environment, and the unneeded exercise of eminent domain in evaluating proposals for new projects.

14. Under this policy, the threshold requirement for an existing company proposing a new project is that the company must be prepared to financially support the project without relying on subsidization from its existing customers. The next step is to determine whether the applicant has made efforts to eliminate or minimize any adverse effects the project might have on the applicant's existing customers, existing jurisdictional companies in the market area and their captive customers, or landowners and communities affected by the location of the new facilities. If residual adverse effects on these interest groups are identified after efforts have been made to minimize them, the Commission will evaluate the proposal by balancing the evidence of public benefits to be achieved against the residual adverse effects. This is essentially an economic test. Only when the benefits outweigh the adverse effects on economic interests will the Commission proceed to complete the environmental analysis where other interests are considered.

15. National Grid's proposal satisfies the threshold requirement that it financially support the project without relying on subsidization from its existing customers. National Grid proposes to provide the new service under new incremental rate schedules with rates designed to recover the project's costs. Only customers utilizing the new liquefaction facilities will pay for the service, thus the project will not be subsidized by National Grid's other customers. Further, the proposal will not degrade service to existing customers, and there will be no adverse impact on other interstate pipelines or their captive customers. We note that no natural gas company or its captive customers have protested the application. Finally, as discussed below, we find the proposed project will have minimal impacts on landowners and surrounding communities.

16. The firm capacity of the proposed project is fully subscribed for a 20-year term under precedent agreements with Boston Gas and Narragansett Electric.[16] Boston Gas

[16] We note the Massachusetts Department of Public Utilities approved Boston Gas' 20-year agreement for firm liquefaction service, finding: it is consistent with that company's supply portfolio objectives; it compares favorably to a range of reasonable supply alternatives; that based on price and non-price factors, liquefaction would contribute to a flexible, reliable, and diversified portfolio, and; liquefaction would reduce reliance on imported LNG and allow access less expensive domestic gas. *Petition of Boston Gas Co. and Colonial Gas Co., each d/b/a National Grid, for Approval of Contracts for Liquefied Natural Gas and Liquefaction Services, pursuant to G.L. c. 164, § 94A*, Mass. D.P.U. Docket No. 15-129, at p. 24 (May 13, 2016). *See* National Grid's *(continued ...)*

20181017-3072 FERC PDF (Unofficial) 10/17/2018

and Narragansett Electric state they rely on LNG to satisfy approximately 37 percent and 35 percent, respectively, of their projected peak day requirements, and stress "it is vitally necessary" for "gas distribution companies to have access to sufficient quantities of LNG in order to provide reliable service to the companies' retail customers," and that there are relatively few significant sources of LNG available for purchase in the Northeast.[17]

17. Based on the benefits the project will provide in making new liquefaction service available, and the lack of adverse effects on existing customers and other gas companies and their captive customers, as well as the minimal impacts on landowners and surrounding communities, we find, consistent with the Certificate Policy Statement and NGA section 7(c), that the public convenience and necessity requires approval of the proposed Fields Point Liquefaction Project, as conditioned in this order.

B. Objections to the Showing of Need

18. Some parties opposing the proposed project claim it is not needed, because to date gas trucked to the National Grid LNG tank has proved to be sufficient to meet peak day demands. However, not only have National Grid's storage customers indicated that they have encountered some difficulties in acquiring what they deem to be adequate supplies of LNG,[18] but the customers have asked National Grid to add facilities to enable them to bring gas to the storage tank by pipeline to diversify their supply portfolio by diminishing the need to rely on LNG, which is only available from a limited number of suppliers and can be subject to volatile pricing. National Grid Gas Delivery Companies state that the LNG import terminal in Everett, Massachusetts, is the only supply source "capable of meeting [National Grid's customers'] full LNG refill requirements,"[19] and express their apprehension that because the Everett facility is not subject to the Commission's NGA section 7 jurisdiction,[20] they have no regulatory assurance the Everett facility will continue to provide them firm service at cost-based just and reasonable rates. Although natural gas commodity prices are not subject to Commission jurisdiction, regardless of the source, National Grid's proposed liquefaction services would be provided under

---

Answer to Comments, at p. 3 (May 23, 2016) and the National Grid Gas Delivery Companies' Comments, at p. 5 (Sept. 4, 2018).

[17] National Grid Gas Delivery Companies' Comments, at p. 4 (May 6, 2016).

[18] *See supra* n. 5.

[19] National Grid Gas Delivery Companies' Comments, at p. 3 (Sept. 4, 2018).

[20] *See Distrigas of Massachusetts LLC*, 124 FERC ¶ 61,039 (2008), in which we approved the abandonment of the Everett facilities and services under NGA section 7(b) in favor of regulation exclusively under NGA section 3.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

section 7, and thus subject to the protections inherent in the Commission's open-access regime. That the customers believe the proposed project will offer benefits not now available is evidenced by their committing to firm service for the full capacity that would be made available for a 20-year term. We accept these commitments as adequate evidence of the need for the proposed project.[21]

19. The Environmental Justice League contends that "switching from imported gas from Everett, will increase our dependency on the Algonquin pipeline, not diversify our energy needs."[22] We disagree. Currently, National Grid's customers are solely dependent on storage gas that can be purchased in liquid form (most frequently from Everett and on occasion from other locations) and trucked to the Fields Point facility. The proposed project would offer those customers the option to obtain gas in vapor form from domestic sources and deliver it to the storage tank by pipeline. Thus, these customers will not be locked into a "dependency" on Algonquin's pipeline, because they would still to be able to have LNG transported from Everett and elsewhere by truck.[23]

20. Some parties opposing the project argue that conservation, weatherization, and reducing demand could serve as substitutes for National Grid's peaking service, or that an equivalent service could be provided using renewable energy sources. As noted above, current customers, who, as LDCs, have obligations to meet the needs of their retail natural gas customers, have requested and committed to pay for new services. Further, as discussed in the EA, while alternatives such as conservation, weatherization, or utilization of energy from renewable sources could have the potential to affect consumption of natural gas in the area, the purpose of the proposed project is to liquefy gas to be held in storage for revaporization during the peak heating season on an as-

[21] The Commission's longstanding reliance on precedent agreements as substantial and sufficient evidence of need has been affirmed by the courts. *See Township of Bordentown, New Jersey v. FERC*, No. 17-3207, slip op. at 48 (3d. Cir. Sept. 5, 2018) ("A contract for a pipeline's capacity is a useful indicator of need because it reflects 'business decision' that such need exists. If there were no objective market demand for the additional gas, no rational company would spend money to secure the excess capacity.") *See also Myersville Citizens for a Rural Community, Inc. v. FERC*, 783 F.3d 1301, 1310-11 (D.C. Cir. 2015) and *Minisink Residents for Environmental Preservation and Safety v. FERC,* 762 F.3d 97 at 110, n.10 (D.C. Cir. 2014).

[22] Comments on EA, at pp. 1-2 (July 25, 2018).

[23] We note that one of National Grid's Fields Point customers, Consolidated Edison Company of New York, Inc. (Con Ed), has opted not to participate as a firm customer on the proposed project.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

needed, on-demand basis. Neither demand reduction nor renewable sources of energy are feasible alternatives for this purpose.

C. Rates

21. Commenters express concern the proposed project could cause retail rates to rise.[24] National Grid insists its project will have no direct impact on retail customer bills, since its customers are LDCs, not retail consumers, and it is not proposing any change to the rates of the LDCs' customers.[25] National Grid points out that retail rates are regulated by state public utility commissions (not this Commission), and a retail rate increase is not a foreseeable outcome of its proposed Fields Point Liquefaction Project. National Grid is correct that the proposed project will not directly impact retail rates, and we concur with National Grid's assertion that a state public utility rate proceeding is the appropriate forum to address issues concerning retail rates.

1. Initial Rates

22. National Grid proposes to provide two new separate, unbundled services – firm liquefaction (Rate Schedule LNG) and interruptible liquefaction (Rate Schedule LNG-D) – under Part 284 of the Commission's regulations at cost-based recourse rates. National Grid proposes initial rates composed of a Capacity Reservation Charge, a Transportation Reservation Charge, and a Fuel Charge. The Capacity Reservation Charge recovers the cost of the liquefaction facilities. The Transportation Reservation Charge is a flow-through of the annual expense National Grid will pay to Narragansett Electric to transport gas from Algonquin to National Grid for liquefaction pursuant to The Narragansett Electric Company Displacement Agreement.[26] The Fuel Charge is a fixed charge that recovers the gas and electricity expenses associated with the liquefaction process.

23. National Grid states it used the liquefaction equipment's design capacity of 20,600 Dekatherm (Dth) per day to develop its maximum firm recourse Capacity Reservation Charge of $179.7262 per Dth per month. National Grid derived this rate using straight

[24] *See, e.g.,* the Environmental Justice League's Comments on EA, attached comments at p. 1; Jenna Karlin's Comments (May 9, 2016); and Julian Drix's Comments (May 5, 2016).

[25] National Grid's Answer to Comments, at p. 14 (May 23, 2016).

[26] As noted, LNG is currently delivered by customers to the Fields Point LNG storage tank by truck and then redelivered to customers primarily by revaporizing the LNG and delivering the gas directly to the Narragansett Electric distribution system and by displacement to the Algonquin system, with lesser volumes sent out as LNG by truck.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

fixed-variable (SFV) cost classification based on a first-year cost of service of $50,814,839. The proposed cost of service reflects a capital structure of 63.96 percent equity and 36.04 percent debt,[27] a return on equity (ROE) of 10.55 percent,[28] a cost of debt of 4.62 percent, and a depreciation rate of 4.4 percent, which reflects a 25-year useful life and includes the cost of removing the asset.

24. In an April 13, 2018 data response, National Grid provided an adjusted cost of service and recalculated its initial recourse rates to reflect changes in the federal tax code, as per the Tax Cuts and Jobs Act of 2017,[29] which became effective January 2018. National Grid's work papers show that the effect of the tax code change is a reduction in both the estimated cost of service and the recourse rates. As National Grid's April 13, 2018 calculation reflects the federal tax code that will be in effect when the project goes into service, the Commission will use those revised recourse rates for the purpose of establishing the initial rates.

25. Based on National Grid's April 13, 2018 data response, its adjusted cost of service is $47,337,328, the maximum Capacity Reservation Charge for firm liquefaction under Rate Schedule LNG is $165.8191 per Dth per month, and the maximum Transportation Reservation Charge is $3.5667 per Dth per month. For interruptible liquefaction under Rate Schedule LNG-D, the revised maximum recourse Liquefaction Charge is $5.4516 per Dth per day, and the maximum Transportation Charge is $0.1173 per Dth per day. The interruptible rates for Rate Schedule LNG-D service are based on the 100 percent load factor equivalent of National Grid's firm Rate Schedule LNG rates. National Grid's initial Fuel Charge is $1.2397 per Dth.[30]

26. Based on National Grid's April 13, 2018 data response, the Authorized Overrun Charge is $5.4516 per Dth, which is equivalent to the maximum interruptible liquefaction

---

[27] National Grid states that because it does not engage in external financing, the capital structure used is that of KeySpan Corporation, which is National Grid's first upstream parent company that engages in external financing.

[28] National Grid states that due to the fact that it has not had a rate case, the ROE used is the 10.55 percent approved by the Commission in the most recent litigated NGA section 4 general rate case: *El Paso Natural Gas Co.,* 145 FERC ¶ 61,040, at P 686 (2013).

[29] Pub 115-97, 131 Stat. 2054 (Dec. 22, 2017).

[30] In National Grid's June 13, 2016 data response it explains that the fuel expense was revised due to a revised heat input value. As a result of the revised fuel expense, the Fuel Charge changed from $1.2487 to $1.2397 per Dth.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

charge. Additionally, National Grid proposes an Excess Transportation Charge of $0.6000 per Dth.

27. National Grid states that the firm service capacity of the proposed project is fully subscribed for 20 years under precedent agreements with two of its three existing customers: Narragansett Electric and Boston Gas. Both companies have agreed to pay the recourse reservation rate under Rate Schedule LNG with a potential discount in the event costs exceed a specified threshold. National Grid's third existing customer, Con Ed, is considering whether to contract for firm liquefaction service as well. If it does so, the precedent agreements provide that the liquefaction service commitments of Narragansett Electric and Boston Gas will be reduced correspondingly. National Grid states that although firm liquefaction service capability is committed for existing LNG storage customers, interruptible liquefaction service may be available for other customers from time to time.

28. The Commission has reviewed National Grid's proposed cost of service, allocation, and rate design used to develop its proposed recourse rates under Rate Schedules LNG and LNG-D, as well as the Fuel Charge, Authorized Overrun Charge and Excess Transportation Charge, and finds that they are generally consistent with Commission policy. Therefore, the Commission will accept National Grid's proposed initial rates for service under Rate Schedules LNG and LNG-D as revised in the April 13, 2018 data response.

2. Interruptible Service Revenue Crediting

29. National Grid states that it has not allocated costs to the interruptible services but instead will credit those revenues to the firm liquefaction customers. However, the Commission's long-standing policy regarding new interruptible services requires either a 100 percent credit of interruptible revenues, net of variable costs, to maximum rate firm and interruptible customers, or an allocation of costs and volumes to such services.[31] Accordingly, we direct National Grid to modify section 36.2 of the General Terms and Conditions (GT&C) of its tariff to include the crediting of interruptible revenues to maximum-rate firm and interruptible customers.

3. Reporting Incremental Costs and Revenues

30. The Commission will require National Grid to keep separate books and accounting of costs and revenues attributable to the incremental services and capacity created by the proposed project as required by section 154.309 of the Commission's regulations.[32] The

[31] *Wyoming Interstate Co., Ltd.*, 121 FERC ¶ 61,135, at P 9 (2007).

[32] 18 C.F.R. § 154.309 (2018).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

books should be maintained with applicable cross-reference as required by section 154.309 of the Commission's regulations. This information must be in sufficient detail so that the data can be identified in Statements G, I, and J in any future NGA section 4 or 5 rate case, and the information must be provided consistent with Order No. 710.[33]

4. Tariff Issues

a. Rate Schedule FST-LG

31. National Grid proposes to modify the terms and conditions applicable to existing customers in the currently effective Rate Schedule FST-LG by extending service to customers that have obtained released firm capacity rights from another customer under this rate schedule pursuant to GT&C section 14. The Commission rejects National Grid's proposal. An NGA section 7 application is not the appropriate forum to modify the terms and conditions of a currently effective rate schedule. Therefore, National Grid is directed to remove this proposed modification in section 14. Our rejection of National Grid's proposal is without prejudice to National Grid pursuing similar changes in a future limited NGA section 4 proceeding.

b. GT&C Section 19 – Scheduling of Service

32. National Grid filed *pro forma* tariff revisions to the scheduling provisions in GT&C section 19.1 to effectuate the new liquefaction service. National Grid is directed to revise the scheduling provisions in section 19.1 consistent with the revised standard nomination and scheduling timelines the Commission incorporated by reference in Order Nos. 587-W[34] and 809.[35]

33. In addition, National Grid's proposed GT&C section 19.2, Liquefaction Service, provides the scheduling priority for firm and interruptible liquefaction services. Section

---

[33] *Revisions to Forms, Statements, and Reporting Requirements for Natural Gas Pipelines*, Order No. 710, 73 Fed. Reg. 36,414 (June 27, 2008), FERC Stats. & Regs. ¶ 31,267, at P 23 (2008).

[34] *Standards for Business Practices of Interstate Natural Gas Pipelines; Coordination of the Scheduling Processes of Interstate Natural Gas Pipelines and Public Utilities*, Order No. 587-W, 80 Fed. Reg. 67,302 (Nov. 2, 2015), FERC Stats. & Regs. ¶ 31,373 (2015).

[35] *Coordination of the Scheduling Processes of Interstate Natural Gas Pipelines and Public Utilities*, Order No. 809, 80 Fed. Reg. 23,198 (April 24, 2015), FERC Stats. & Regs. ¶ 31,368 (2015).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

19.2(a) includes authorized overrun as the lowest priority within firm services, before other interruptible services listed in section 19.2(b). Commission policy requires that all interruptible services, including authorized overrun, be given the same priority for scheduling and curtailment.[36] National Grid is directed to modify section 19.2 accordingly.

34. Several sections of National Grid's *pro forma* tariff records appear to set forth incorrect references or include typographical errors. In a May 26, 2016 data response, National Grid provided revised language to correct GT&C section 19.4(b) by adding the words "and deliveries" to the sentence to describe the scheduling of LNG deliveries to interruptible customers. National Grid also provided revised tariff language to correct references to rate schedules. In addition, the Commission notes that GT&C section 18.4(c) makes reference to GT&C section 18.3(c), which does not appear in the tariff provisions. The Commission directs National Grid to correct these tariff provisions when filing tariff records 30 to 60 days prior to commencement of service.

D. Environmental Analysis

35. On September 25, 2015, the Commission issued a *Notice of Intent to Prepare an Environmental Assessment for the Planned Fields Point Liquefaction Project, Request for Comments on Environmental Issues, and Notice of Public Scoping Meeting* (NOI). The NOI was published in the *Federal Register*[37] and mailed to interested parties including federal, state, and local officials; agency representatives; environmental and public interest groups; Native American tribes; local libraries and newspapers; and affected property owners, including nearby residences.[38] We received comments in response to the NOI from one U.S. representative, three state senators, two state representatives, one local representative, three state agencies, one local agency, six local organizations, and 76 individuals. In addition, 20 organizations, individuals, and businesses filed motions to intervene in the project.

36. On October 8, 2015, Commission staff conducted a public scoping session in Providence, Rhode Island, to provide the public with an opportunity to learn more about

[37] 80 Fed. Reg. 59,769 (Oct. 2, 2015).

[38] Section 157.6(d)(2)(iii) of the Commission's regulations defines "affected landowners" as those "within one-half mile of proposed" LNG facilities.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

the project and comment on environmental issues that should be addressed in the Environmental Assessment (EA). In total, 33 individuals provided oral comments on the project at the Commission's scoping session. A transcript of the scoping session was entered into the public record in Docket No. PF15-28-000 on October 29, 2015.

37. The primary issues raised during scoping include project purpose and need, renewable energy and energy conservation alternatives, risks from earthquakes, impacts on neighboring residential properties, environmental justice, impacts on public facilities, property values, employment opportunities, greenhouse gases (GHG), impacts on air quality, general safety issues (including safety of the nearby community), and cumulative impacts including climate change.

38. To satisfy the requirements of the National Environmental Policy Act of 1969 (NEPA),[39] Commission staff prepared an EA for National Grid's proposal. The EA was prepared with the cooperation of the Rhode Island Coastal Resources Management Council (CRMC), the Rhode Island Department of Environmental Management (RIDEM), and the U.S. Department of Transportation (DOT). The analysis in the EA addresses geology, soils, water resources (including existing groundwater contamination), vegetation, wetlands, wildlife, fisheries, threatened and endangered species, land use, recreation, visual resources, cultural resources, air quality, noise, reliability and safety, socioeconomics (including environmental justice), cumulative impacts, and alternatives. All substantive comments raised during the scoping process were addressed in the EA.

39. The EA was issued for a 30-day comment period and placed into the public record on June 25, 2018. The Commission received comments on the EA from Rhode Island State Senator Harold Metts, Rhode Island State Representative Joseph S. Almeida, City of Providence Councilman Seth Yurdin, the U.S. Environmental Protection Agency (EPA), RIDEM, the Narragansett Bay Commission, the Environmental Justice League,[40] the Rhode Island Student Climate Coalition, Save The Bay, National Grid, Jeff Davidson, Jonathan Hernandez, Lucy Rios, Luis (no last name provided), and Seth H. Handy.[41] The

[39] 42 U.S.C. § 4321 *et seq*. (2012).

[40] In addition to its own comments, the Environmental Justice League's July 7, 2018 submission attached comments opposing the proposed project (some of which had been previously submitted) from other organizations, officials, and individuals.

[41] Seth H. Handy urges the Commission not to preempt the CRMC's consistency determination. *See* the Coastal Zone Management Act of 1972 (CZMA), 16 U.S.C. §§ 1451-1464 (2012); *see also* 15 C.F.R. pt. 930, subpt. D (2018). We clarify that we could not preempt the CRMC's CZMA determination, or for that matter, any of the other separate federal authorizations that National Grid is required to obtain.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

U.S. Fish and Wildlife Service, New England Field Office, responded that it did not have comments on the EA.

40. National Grid provided several clarifications and updated information regarding various topics addressed in the EA, such as requirements pertaining to its Short Term Response Action Plan (STRAP) and STRAP Addendum approved by RIDEM, the expected project construction timeframe, mercury test results on proposed feed gas sources, and code design requirements for Seismic Categories I and II. We have noted these clarifications and updates. None of these minor updates changes the conclusions of the EA.

41. National Grid comments that the fire protection systems, uninterruptable power supply, emergency power generators, emergency lighting, radio communications, control valves, instrumentation and shut down systems associated with the project – which are referenced in the EA's recommendation 22 – are not associated with the LNG storage tank or any of its appurtenances, and thus should be classified as Seismic Category II instead of Seismic Category I. The code requirements for Seismic Category I are specific to LNG storage tanks and their appurtenances, whereas Seismic Category II applies to the Project systems. We have revised Environmental Condition 22 to clarify that only those proposed systems that could minimize potential cascading damage impacts to the existing LNG storage tank and its appurtenances should be classified as Seismic Category I.

42. U.S. Senators Jack Reed and Sheldon Whitehouse and U.S. Representatives David Cicilline and James Langevin jointly requested that the period of time to submit comments on the EA be extended from 30 to 60 days. As has been our practice, Commission staff in this proceeding continued to evaluate and respond to comments received after the close of the comment period. While not at issue in this proceeding, this practice is increasingly becoming a concern in permitting proceedings generally. We have been faced with an increasing number of comments submitted after the established deadline for responding to the environmental document has expired. In order for the Commission to evaluate and respond to comments while acting on pending certificate matters in a timely manner, commenters should comply with our notices soliciting comments and file their comments by the established deadlines.

1. EA vs. EIS

43. Save The Bay, City of Providence Councilman Seth Yurdin, and the Environmental Justice League contend the Fields Point Liquefaction Project merits an Environmental Impact Statement (EIS), rather than the EA that was undertaken, arguing an EIS would provide a more detailed evaluation of project impacts. As an initial matter, we do not believe there are issues inadequately or inaccurately reviewed in the EA. We affirm the determination reached in the EA that if National Grid constructs and operates its proposed facilities in accordance with its application, as supplemented, and the environmental conditions described in the EA (which are incorporated as applicable in

20181017-3072 FERC PDF (Unofficial) 10/17/2018

the appendix to this order), approval of the Fields Point Liquefaction Project would not constitute a major federal action significantly affecting the quality of the human environment. Consequently, because of this finding of no significant impact, there is no cause to prepare an EIS.

44. In this case, Commission staff, guided by experience with prior liquefaction projects and section 380.5 of the Commission's regulations, determined it would be appropriate to initially undertake an EA. The EA thoroughly assessed the proposed project's potential impacts on the resources that would be evaluated in an EIS, and concluded the proposed project would have no significant impact. The comments contain nothing that undermines this conclusion. Rather, the reasons advanced for why an EIS must be prepared largely rest on public concerns regarding the continued operation of the existing Fields Point facility, a matter which is not at issue in this proceeding.

2. Alternatives

45. The regulations of the Council on Environmental Quality (CEQ) require that an EA include a brief discussion of alternatives to the proposed action.[42] Commenters complain the EA's discussion of the alternatives of using renewable energy sources and energy conservation measures was insufficient.

46. The EA acknowledges renewable energy and energy conservation as potential alternatives, but found these would not be reasonable alternatives because they could not fulfill the project's purpose, which is to add liquefaction capability at the Fields Point LNG facility. The EA finds (1) renewable sources could not provide energy in the form and quantities demanded by the project's customers, and (2) while energy conservation initiatives within the Fields Point service area could help to alleviate overall peak shaving demands, energy conservation would not eliminate the need for peak shaving services.[43] In view of this, we concur with the EA's conclusion that renewables and/or conservation are not feasible project alternatives, and were therefore appropriately rejected.

47. Commenters expect renewable energy sources to be developed at an increasingly rapid pace, and to eventually displace the current need for National Grid's LNG storage services.[44] We will not reject a pending proposal for which a current need has been

[42] 40 C.F.R. § 1508.9(b) (2018).

[43] EA section 3.3 Energy Alternatives at p. 144.

[44] For example, Jonathan Hernandez expects "natural gas will very soon become uncompetitive with renewable alternatives coupled with storage solutions" so that "[b]y the time this project is completed, it will already be obsolete and a few years later will be uncompetitive with renewable energy and battery storage alternatives." Comments, at

(continued ...)

20181017-3072 FERC PDF (Unofficial) 10/17/2018

shown based on speculation that the project may no longer be needed at some point in the future. We presume National Grid and its customers would not undertake the financial risks inherent in adding the proposed liquefaction capability unless they were confident demand for the new services would be sustained for long enough to justify the investment.[45] Given that National Grid will be at risk for the cost of the project, we also presume the company has prudently projected the duration of demand for the new services it seeks to provide. We decline to second guess National Grid's business decision based on speculation about prospective changes in energy markets.

3. KeySpan LNG, L.P.

48. In 2005, we denied a request by KeySpan LNG, L.P. (KeySpan) to use its existing LNG storage tank at Fields Point to support the development of a new LNG import terminal.[46] In 2007, National Grid acquired KeySpan's assets. U.S. Representative Cicilline asks that we determine whether the denial in *KeySpan* is relevant to the Fields Point Liquefaction Project. Several of the parties that opposed KeySpan's LNG import terminal are participants in this proceeding, and they repeat and renew arguments initially put forth in the *KeySpan* case. They assert we should follow the same rationale we relied on in denying KeySpan's request to also deny National Grid's request, or alternatively, require that National Grid bring the LNG storage tank into compliance with current safety standards as a condition of our approval to add liquefaction facilities.[47]

---

p. 1 (July 25, 2018).

[45] We note the customers committing to firm long-term service, Boston Gas and Narragansett Electric, state they expect to "have an increasing need for LNG resources to meet projected incremental customer demands" and add that "[i]nterstate pipeline capacity cannot be relied upon exclusively to meet projected demand increases," pointing out that "the suspension by Kinder Morgan of its Northeast Energy Direct Project has increased the urgency of obtaining access to incremental LNG supplies." National Grid Gas Delivery Companies' Comments, at p. 5 (May 6, 2016). *See also supra* note 21.

[46] *KeySpan*, 112 FERC ¶ 61,028 (2005), *order dismissing and denying reh'g*, 114 FERC ¶ 61,054 (2006).

[47] DOT, which oversees compliance with the 49 C.F.R. Part 193 safety standards, does not require existing LNG storage tanks such as the National Grid's, which met the regulatory requirements in effect when it was placed in service, to make modifications to be able to comply with subsequent regulatory changes. However, if certain existing LNG facilities are replaced, relocated, or significantly altered, they may then become subject to current Part 193 standards governing siting, design, installation, and construction. *See* 49 C.F.R. § 193.2005(b) (2018).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

49. We do not believe the outcome in *KeySpan* should determine the outcome here. Prior to *KeySpan*, we had permitted companies to make modifications to LNG facilities without requiring that existing facilities be upgraded to comply with contemporary regulatory requirements.[48] In contrast to those cases, we deemed KeySpan's request to be a case of first impression, because "for the first time, we have been presented with a proposal to construct a new LNG import facility which would incorporate an existing LNG storage facility;"[49] thus, "[i]n essence, KeySpan is proposing to construct a new LNG import terminal."[50]

50. Before KeySpan sought to make use of its existing LNG storage tank as a component of a new LNG import terminal, the same tank had been owned by Algonquin LNG, Inc. (Algonquin LNG). Algonquin LNG operated the Fields Point facility as National Grid now does, receiving deliveries of LNG by truck for storage, and then sending the stored LNG out to customers as vapor by pipeline or as LNG by truck. During the period of its ownership, Algonquin LNG sought authorization to modify the facility by, among other things, connecting it to a pipeline and adding liquefaction capability so it could offer the same service that National Grid now seeks to provide; namely, the option for customers to deliver gas by pipeline and have it liquefied on site and stored as LNG. In granting Algonquin LNG's requested authorization, we did not require that the existing LNG storage tank be modified to meet then-current DOT safety, due to DOT's determination that adding liquefaction facilities would not be a significant modification of the LNG tank.[51] Ultimately, Algonquin LNG, citing market conditions, decided not to go forward with its project. Now National Grid has revived, in large part, Algonquin LNG's proposal.

51. We find National Grid's proposal here to be far closer in intent, design, scope, and scale to Algonquin LNG's proposal to receive by pipeline and liquefy gas at the existing storage facility than to KeySpan's proposal to build a new LNG terminal incorporating the existing LNG storage tank. Accordingly, we find the rationale and result in *Algonquin LNG* to be the more appropriate model to follow. Thus, as we concluded in

---

[48] *See, e.g.*, *Cove Point LNG Limited Partnership*, 97 FERC ¶ 61,043, *orders on reh'g and clarification,* 97 FERC ¶ 61,276 (2001) and 98 FERC ¶ 61,270 (2002); *Southern LNG, Inc.*, 103 FERC ¶ 61,029 (2003); and *Trunkline Gas Company,* LLC, 108 FERC ¶ 61,251 (2004), *order amending certificate*, 110 FERC ¶ 61,131 (2005).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

Algonquin LNG we conclude here: the proposal to add a pipeline interconnect and liquefaction capability at the LNG storage tank does not significantly alter the tank, and thus does not require upgrading the tank to meet current DOT safety standards.

4. Public Safety

52. Commenters express concerns about the safety of the proposed project, in particular, the potential risks to nearby schools, day care centers, hospitals, health care centers, and residential communities. The Environmental Justice League disagrees with the EA's conclusion that the proposed facilities would be a sufficient distance away from existing and planned future residences and public services.

53. The proposed new facilities will be installed inside the existing security fence surrounding the Fields Point site. The LNG storage tank has been operating since 1974 without significant incident and no changes are proposed to the tank. The EA observes that Fields Point is in an industrial area, and adding liquefaction capability does not represent a new type of use, since the Fields Point site will continue to function as an LNG storage facility. The EA describes DOT siting requirements,[52] which mandate that certain spills and releases cannot extend beyond the property line. DOT has reviewed and does not object to the criteria and methodology National Grid used to identify design spill scenarios. Based on the hazard analyses discussed in EA section 2.8.5, we affirm the proposal would not significantly increase the risk to development adjacent to the Fields Point site or to the public beyond the adjacent development. We therefore find the proposed project's location would be a sufficient distance away from existing and planned future residences and public services. We concur with the EA's conclusion that National Grid's design includes acceptable layers of protection or safeguards that would reduce the risk of a potentially hazardous scenario from developing into an event that could impact the offsite public.

54. Some comments do not take issue with the proposed liquefaction facilities per se, but raise objections to the continued operation of the LNG storage tank. The proposed project has been evaluated to determine if it could impact the safety and reliability of the existing LNG storage tank, and we have found that it would not, as it would not modify the existing mode of operation of the storage tank. The existing tank is subject to regular inspections by DOT and Commission staff to ensure its continued safe and reliable operation. Because the continued operation of the LNG storage tank is not at issue in this proceeding, we confine our responses to safety concerns related to the newly proposed facilities.[53]

---

[52] 49 C.F.R. pt. 193, subpt. B (2018).

[53] If the proposed facilities are placed in service, they too become subject to

(continued ...)

20181017-3072 FERC PDF (Unofficial) 10/17/2018

55. Save The Bay maintains the public is entitled to review the plan to shut down the facility in the event of a major storm and should be made aware of potential impacts due to emergency situations.[54] The Narragansett Bay Commission observes that EA section 2.8.4 directs National Grid to submit certain information on the proposed project's design, construction, operation, and emergency procedures and asks that National Grid's submissions be made public.[55]

56. In response to Save The Bay, we note LNG plant operators must prepare emergency procedures that provide for: responding to controllable emergencies and recognizing an uncontrollable emergency; taking action to minimize harm to the public including the possible need to evacuate the public; and coordinating and cooperating with appropriate local officials.[56] Information pertaining to items such as offsite emergency response and procedures for public notification and evacuation is subject to public disclosure. In response to the Narragansett Bay Commission, we note this order's environmental conditions require National Grid to submit the information described in EA section 2.8.4. Upon submission, this information becomes part of the record in this proceeding and thereby accessible to the public. If upon submission, certain information is initially withheld from public view, Save The Bay, the Narragansett Bay Commission, or others may seek access pursuant to the procedures described in sections 388.108 and 388.113 of the Commission's regulations.

57. In answer to Save The Bay's concern about a major storm event, National Grid has an existing Facility Response Plan in place that addresses weather-related events at Fields Point. National Grid states that:

> [I]n the event of severe weather, including flooding, the LNG plant would go into shut down mode that includes closing of all transfer valves and isolation systems. The internal valves on the LNG storage tank as well as filling valves would be shut and no liquid could be transferred in or out of the tank. The proposed liquefaction facilities would shut down in a similar manner.[57]

---

ongoing inspection by DOT and Commission staff.

[54] Save The Bay's Comments on EA, at 3-4 (July 24, 2018).

[55] The Narragansett Bay Commission's Comments on EA, at p. 1 (Aug. 2, 2018).

[56] *See* 49 C.F.R. § 193.2509 (2018).

[57] National Grid's Answer to Comments on the EA, at pp. 18-19 (Aug. 9, 2018).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

58. In addition, this order's Environmental Condition No. 61 requires National Grid to update its emergency procedures, which include the existing Facility Response Plan, prior to commissioning its new liquefaction facilities. As part of developing an updated Facility Response Plan to protect the public in the event of an emergency, National Grid will work with area firefighters and emergency responders to identify any additional coordination, response equipment, or training that may be appropriate for the new facilities and products.[58]

5. Bund Wall: Segmentation and Safety

59. In its application, National Grid stated its intention to add a reinforced concrete bund wall around its LNG storage tank, and stressed that this wall and its proposed liquefaction facilities are independent projects. National Grid explained that by undertaking these two projects simultaneously, it could reduce overall peak construction manpower and temporary construction vehicle traffic. National Grid maintained that the bund wall qualifies as an auxiliary installation under section 2.55(a) of the Commission's regulations. Commission staff sought clarification on how the bund wall could qualify as a section 2.55(a) auxiliary installation. In response, National Grid replied that it is reevaluating the design of the bund wall and no longer expects to proceed with its construction at the same time as the proposed liquefaction facilities.[59]

60. The Environmental Justice League insists the proposed liquefaction project should be considered in conjunction with construction of the bund wall, citing CEQ regulations that state connected actions, cumulative actions, and similar actions should be considered in a NEPA review to preclude segmenting federal actions into separate projects and thereby failing to address the true scope and impact of the activities that should be under consideration. Connected actions (1) automatically trigger other actions; (2) cannot or will not proceed unless other actions are taken previously or simultaneously; and (3) are interdependent parts of a larger action and depend on the larger action for their justification.[60] Actions are cumulative if, when viewed with other proposed actions, they have cumulatively significant impacts and should therefore be discussed in the same

[58] *See* 49 C.F.R. § 193.2509(b)(3) (2018).

[59] *See* National Grid's March 16, 2017 data response. National Grid adds that after it completes "its reevaluation of the storage tank containment enhancement project, it commits to meet with the Commission staff to discuss its plans and to file a Natural Gas Act section 7(c) application for the project, if appropriate for the design at that time." *Id.* at p. 1.

[60] 40 C.F.R. § 1508.25(a)(1) (2018).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

impact statement.[61] Similar actions are those "which, when viewed with other reasonably foreseeable or proposed agency actions, have similarities that provide a basis for evaluating their environmental consequences together, such as common timing or geography."[62]

61. We find that adding liquefaction capability (which, as discussed, does not involve significant changes to the LNG tank) and adding a bund wall specifically for the LNG tank (i.e., not for the newly-proposed facilities) are functionally independent projects, either can go forward without the other. Thus, the Fields Point Liquefaction Project does not qualify as a connected action to the bund wall. Whether the bund wall's impacts should be added to the proposal's impacts as cumulative or similar is no longer relevant, since National Grid no longer plans to build the wall at the same time as the liquefaction facilities and we have no such proposal before us. We affirm the Fields Point Liquefaction Project is not a segment of a larger action.

62. The Environmental Justice League objects to National Grid setting aside plans to build a bund wall, stating that by not building the wall, "National Grid is trying to ignore safety concerns over the aging tank."[63] With respect to safety, as to the hazard analyses and thermal exclusion zones, the EA concludes that "dispersion hazards from thermal radiation, vapor dispersion, and explosion overpressure would not extend beyond the boundaries of the Project site;" further, the "site is a sufficient distance away from existing and planned future residences and public services," thus "no significant adverse impacts would occur during Project construction or operation."[64] In addition, the EA evaluated the proposed project to determine if it could impact the safety and reliability of the existing LNG storage tank, a proposed concrete barrier separating the liquefaction facilities from the existing LNG storage tank, and a proposed impoundment system that reduces the risk of an incident impacting the existing LNG storage tank. To ensure there would be no adverse impacts, we adopt recommendations to finalize the design of these components and others, and include Environmental Condition No. 36, which directs

---

[61] *Id.* at. § 1508.25(a)(2).

[62] *Id*. at § 1508.25(a)(3). Unlike connected and cumulative actions, an agency has some discretion about combining similar actions in the same environmental review. *See, e.g., Earth Island Inst. v. U.S. Forest Serv.,* 351 F.3d 1291, 1305-06 (9th Cir. 2003).

[63] The Environmental Justice League's Comments on EA at p. 5.

[64] *See* EA at p. 33. We note our assessment of potential project impacts was based on the Fields Point site as is, and did not rely on the prospective installation of other facilities such as a bund wall.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

National Grid to file an updated vacuum relief analysis for the existing LNG tank.[65] In view of these conclusions, and our finding that the new liquefaction facilities would not significantly alter the existing LNG storage tank, we have no reason to subject the existing tank to hazard analyses as a component of our assessment of the safety of the new liquefaction facilities. Consequently, the bund wall has no bearing on our review of the application before us, and this proceeding is not the appropriate forum to discuss whether or how to build a bund wall.[66]

6. Environmental Justice

63. Rhode Island Senator Harold M. Metts jointly with U.S. Representative Joseph S. Almeida, the Environmental Justice League, and others, insist the proposed Fields Point Liquefaction Project will have disproportionately high and adverse impacts on minority or low-income populations and pose a risk to these populations. Some commenters claim we have failed to follow the directives of Executive Order No. 12898.[67]

64. We note that although the EA does consider potential project impacts on minority or low-income populations as part of the assessment of socioeconomic effects, it does not do so pursuant to Executive Order No. 12898, as that order does not apply to independent agencies such as the Commission. Accordingly, the Commission is not bound by the directives of that Executive Order. In addition, some comments seek to establish that because Fields Point is in an industrial area, and because minority and low-income populations are in the same area, no further development should be permitted in this area. Setting aside the merits of such a policy, we clarify that our review looks at the potential impacts of the particular project before us to gauge whether its impacts would result in a disproportionately high and adverse impact on minority or low-income populations. Thus, in this case we do not look back and attempt to determine whether longstanding industrial operations proximate to the Fields Point site may have contributed to disproportionately high and adverse impacts on the health and safety of nearby residents. Rather, we take the current conditions as they are and ask whether impacts of the

[65] In a Sept. 19, 2016 Data Response on whether the existing pressure relief and vacuum relief needed modification as a result of the addition of the proposed liquefaction facilities, National Grid only addressed pressure relief valves.

[66] We note that while there may be advantages to constructing the separate projects simultaneously, such as administrative efficiencies and a compacted time frame, we have no cause to compel National Grid to do so.

[67] *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations*, 59 Fed. Reg. 7629 (Feb. 11, 1994).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

proposed project, when added to the status quo, will cause disproportionately high and adverse impacts. As discussed below, we find they will not.

65. We do not dispute commenters' claims that environmental conditions in the vicinity of Fields Point reflect its historic use as a site for industrial operations; however, we anticipate the additional environmental degradation the proposed project may cause would be minimal, and would not result in high and adverse impacts on affected populations. Given our finding that no affected population would be subject to high and adverse impacts, we see no reason to discuss claims that fault our geographic and demographic identification of affected populations. Commenters have not presented arguments or evidence that call into question the EA's conclusion, based on a rigorous analysis employing the use of the EPA's EJSCREEN tool, that the proposed project will not have disproportionately high and adverse impacts on minority or low-income populations. As stated in EA sections 2.5.1, 2.5.4, and 2.7.1, the proposed project would generate positive benefits for the local economy and have relatively little impact on traffic, minimal impacts on air quality, and minimal impacts on local minority or low-income communities. The EA also considered potential impacts of accidents, and determined National Grid's facilities' design includes acceptable layers of protection and safeguards to reduce the risk of a hazardous scenario from developing into an event that could impact the offsite public, regardless of demographic make-up. In view of this, we find the EA adequately considered the proposed project's potential environmental impacts and properly concluded it would not have disproportionately high and adverse impacts on minority or low-income populations.

7. Sea Level Rise and 500-year Design Basis

66. The analysis in the EA used a 30-year design life for the facilities in projecting potential environmental impacts. Commenters claim this is too short a time frame, because the new facilities may be in service for more than 30 years, and if so, the potential for more extreme environmental impacts increases. In particular, commenters point to the prospect for the sea level to rise. The EA took this into account,[68] and noted that although regulations require National Grid to design its proposed liquefaction facilities to withstand a 100-year flood event, National Grid has elected to design the facilities to withstand a 500-year flood event, which exceeds the DOT's federal regulations and CRMC requirements. In addition, National Grid will place concrete jersey barriers along the north side of the project site. Designing the facilities to a higher standard than required should enhance resistance to the risks of damage due to extreme events such as sea level rise, hurricanes, and floods.

[68] *See, e.g.*, the discussion in the EA of National Grid's Coastal and Hydraulic Modeling Analysis at pp. 89-91 and EA section 2.9.2.5 on climate change.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

67. With respect to the facilities' anticipated 30-year design life, as stated in the EA and in Environmental Condition No. 13 of this order, National Grid will be required to submit a surface maintenance plan that ensures the crest elevation relative to mean sea level will be maintained for the *life of the facility*. Although we assess the proposed facilities using a 30-year design life, once in operation, the new liquefaction facilities, along with the existing Fields Point LNG facilities, will be subject to regular on-site inspections by Commission staff for as long as the facilities remain subject to our jurisdiction. Thus, for the facilities to continue to operate, they must continue to comply with all applicable conditions and requirements.[69] In the event circumstances indicate National Grid may no longer be capable of operating its facilities in accordance with the conditions of its authorization – whether in 5 years or 50 years – the Commission may compel National Grid to show cause why it should not abandon noncompliant facilities and services.[70]

68. Save The Bay is not satisfied with the Environmental Condition No. 13 requirement that National Grid submit "a surface maintenance plan for a perimeter berm, stamped and sealed by the professional engineer-of-record, registered in Rhode Island" with "procedures to ensure the crest elevation relative to mean sea level would be maintained for the life of the facility considering berm settlement, subsidence, and sea level rise." Save The Bay states that the Commission "may not skirt its obligation to take a 'hard look' at the environmental consequences by delegating future issues concerning the safety of the tank to an engineer hired by National Grid."[71]

69. We clarify that we are not delegating our assessment of environmental impacts to a third party. National Grid has designed its proposed facilities to withstand a 500-year

---

[69] This applies as well to the 49 C.F.R. pt. 193 regulations enforced by PHMSA. We note that National Grid, like all certificate holders, has an "obligation to add or even replace facilities necessary to maintain the certificated capacity," or alternatively "to seek abandonment" under NGA section 7(b). *Maritimes and Northeast Pipeline, L.L.C., et al.*, 80 FERC ¶ 61,136, at 61,476 (1997).

[70] The CRMC, in its Coastal Zone Management Federal Consistency Determination, states that any "substantial changes to the proposed Project from the material presented by National Grid, or later substantial modifications to the license issued by FERC, may require a separate CZMA review." National Grid's submission of the CRMC decision, at p. 2 (Dec. 20, 2017). We concur with National Grid's observation that if "the liquefaction equipment continues to operate beyond the currently anticipated 30 years, then the CRMC may need to engage in another consistency review." National Grid's Answer to Comments on the EA at p. 16.

[71] Save The Bay's Comments on EA at p. 4.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

flood event, thereby exceeding DOT regulations and National Oceanic and Atmospheric Administration recommendations.[72] We have determined, after taking a hard look, that National Grid's proposed protective measures, including its design of revetment and jersey barriers, along with the site and equipment elevations and locations, would be sufficient to protect the proposed facilities from a 500-year still water elevation level of 19 feet and a sea level rise of 0.9 feet. We will review the surface maintenance plan when it is submitted, and thereafter continue to monitor the adequacy of National Grid's protective measures as part of our ongoing oversight of the Fields Point facilities and operation.

8. Surface Water and Groundwater Resources

70. Commenters express general concerns about the proposed project's impact on surface water resources, the project's potential to cause water pollution, and the potential spread of existing groundwater contamination in the project area. As explained in the EA, National Grid is required to obtain a Water Quality Certification from RIDEM. In addition, National Grid must adhere to its project-specific *Spill Prevention, Control, and Countermeasure Plan & Preparedness, Prevention, and Contingency Plan*, which will ensure that impacts on surface water resources are not significant.[73] Further, the EA concludes that based on the mitigation measures to which National Grid has committed in its STRAP and STRAP Addendum, existing groundwater contamination at the project site will be managed effectively to minimize impacts on groundwater resources during construction and operation of the project.[74] We concur with these conclusions.

71. RIDEM observes that the EA does not indicate whether the proposed stormwater collection and treatment system will be lined to reduce potential impacts on groundwater resources on site. RIDEM recommends that National Grid provide an evaluation of how its impoundment rainwater removal systems in the existing Truck Loading Sump area will comply with both the Rhode Island Pollution Discharge Elimination System and Water Quality Regulations. Because the details of the RIDEM recommendations were not included in the EA, and National Grid has not provided information to specify whether the stormwater collection and treatment system will be lined, we have included Environmental Condition Nos. 17 and 18 in the appendix to this order, which respectively require that prior to construction, National Grid file for Commission review and approval (1) a plan that specifies how the stormwater collection and treatment system will be lined in order to reduce potential impacts on groundwater resources on site, and

[72] EA at p. 90.

[73] *Id.* at p. 26.

[74] *Id.* at p. 23.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

(2) an evaluation of how the impoundment rainwater removal systems will comply with both the Rhode Island Pollution Discharge Elimination System and Water Quality Regulations. National Grid's compliance with RIDEM's recommendations and our environmental conditions will ensure the project will have no significant adverse impacts.

72. RIDEM also observes that the Providence River at the location of the project site should be classified as SB1{a}, rather than SB1 as indicated in EA section 2.2.2.1. According to RIDEM Water Quality Regulations, {a} indicates a partial use designation due to impacts from Combined Sewer Overflow. Primary contact recreational activities, shell fishing uses, and fish and wildlife habitat will likely be restricted. This change does not affect our analysis and we have noted the correction.

9. Short Term Response Action Plan

73. The Environmental Justice League argues the Commission should require full remediation of the entire Fields Point site prior to National Grid installing the proposed liquefaction facilities. As described in more detail in EA section 1.4.3, RIDEM's Office of Waste Management is overseeing National Grid's cleanup of Fields Point. RIDEM determined that a STRAP was appropriate and required for the remediation of the impacted soil and groundwater on that portion of National Grid's property where the liquefaction facilities would be located. RIDEM and National Grid participated in a Public Involvement Plan to collect and respond to community concerns about the investigation and cleanup of the Fields Point site. Additionally, RIDEM expanded the public participation process to the maximum amount of time allowable by regulation. RIDEM responded to all technical STRAP comments, as well as comments concerning RIDEM's jurisdiction and the regulatory process.[75] National Grid has submitted a STRAP and STRAP Addendum. RIDEM concurs with, and is monitoring compliance with, these plans. Commenters fault National Grid's STRAP for not being a comprehensive plan to fully remediate the entire site. RIDEM, which has been supervising remediation of the Fields Point site for decades, has found National Grid's STRAP sufficient to permit the liquefaction project to go forward without first fully remediating the entire site, and we accept this determination.

10. Air Emissions and Climate Change

74. Several commenters express concerns about the proposed project's potential short- and long-term air quality impacts. Emissions attributable to construction are reviewed in the EA, and we affirm the finding that although air quality in Providence County would be affected by fugitive dust and combustion emissions attributable to construction equipment, land disturbance, and increased traffic from worker and delivery vehicles,

[75] *Id.* p. 6-7.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

these emissions would be below all applicable air quality standards, only minimally impact local and regional air quality, and be intermittent and temporary. As an added measure of protection, National Grid will conduct perimeter air monitoring for respirable dust and total volatile organic compounds during construction.

75. With respect to long-term air impacts attributable to operating the new liquefaction facilities, the EA found that the addition of a regeneration heater and emergency generator would produce only small amounts of emissions, which would comply with air quality provisions and minimally impact local and regional air quality as illustrated through a refined dispersion modeling analysis.[76] Further, the EA noted that the existing LNG storage tank does not require a Title V permit,[77] and with the addition of the maximum potential emissions of all pollutants from the proposed liquefaction facilities, the Fields Point emissions would remain well below any applicable major source threshold, and thus would not require a Title V permit.

76. Comments that claim the proposed project will contribute to global climate change or encourage additional domestic natural gas production indicate a misunderstanding of this particular proposal. The Fields Point Liquefaction Project is not expected to make changes to current quantities of gas produced, gas delivered to the storage tank, LNG stored, gas delivered to National Grid's customers, or gas ultimately consumed. Although the proposal may diminish the distance between wellhead and burnertip for some shipments of gas, it should not alter volumes of gas produced or consumed, and thus should not cause a significant change in emissions.

77. In response to comments received on the EA requesting more detailed information about changes in truck transport and LNG-related air emission impacts, National Grid

---

[76] *Id.* pp. 59-60. The EA found the proposed project would not alter the current levels of emissions from truck loading and unloading, valves, flanges, connectors, pump seals, maintenance activities, emergency venting, equipment operated intermittently, and laboratory equipment.

[77] The Title V Operating Permit Program, described in 40 C.F.R. pt. 70 (2018), requires major stationary sources of air emissions to obtain an operating permit if potential emissions of criteria pollutants would exceed certain thresholds. RIDEM clarifies that the New Source Performance Standards, Subpart Dc, *Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units*, is not applicable to the proposed regeneration heater, as the heater's capacity is rated at less than 10 million Btu per hour. In addition, RIDEM points out that several sub-headings under the Adobe Acrobat version of the EA on the Commission's e-library, and distributed to commenters via compact disc, are incorrectly listed under the heading "Title V Operating Permit." We have noted these corrections.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

presented an expanded evaluation of GHG emissions that not only takes into account a potential decrease in emissions due to substituting transportation by pipeline for transportation by truck (similar to the scenario posited in the EA), but also compares the difference in emissions due to substituting transportation by pipeline for transportation by ship to the Everett, Massachusetts, LNG terminal. National Grid's estimates indicate the proposal would result in a net decrease in transportation-related GHG emissions (as carbon dioxide equivalent (CO_2e)) of between approximately 2,756 to 3,781 tons per year.[78] Some of these emission reductions are attributable to replacing trips by trucks taking foreign LNG from Everett or Quebec with shorter trips from Fields Point, made possible by adding the ability to receive domestic gas by pipeline and liquefy it at Fields Point. The remaining decreases are attributable to reducing net marine transport of LNG to Everett, again made possible by the proposed project.

78. We accept the premise that to the extent the proposed project permits National Grid's customers to displace foreign sources of natural gas, liquefied abroad and transported by ship, with domestic sources of natural gas, delivered by pipeline and liquefied on site, global GHG emissions should be reduced. National Grid observes the EA's estimate of the proposed project's GHG emissions is based on a theoretical maximum, and therefore overstates the likely emissions from actual operations. The EA assumes the regeneration heater will operate 8,760 hours per year – i.e., continuously for a year – resulting in an estimate of 5,160 tons of GHG per year. National Grid expects to operate the heater up to 214 days a year during the summer storage fill period, and does not expect it to run 24 hours per day, and so suggests a more reasonable estimate of the heater's GHG emissions would be 1,513 tons per year. National Grid's lesser estimate may represent a more realistic scenario; however, this does not affect the determination in the EA that the proposed project would not result in significant cumulative impacts.[79]

11. Traffic

79. The Narragansett Bay Commission and the EPA maintain there is a need for more detail concerning how the proposed project may affect truck transport of LNG to and from the modified Fields Point LNG facility. Specifically, the EPA recommends that the EA's discussion of truck trips during operation explain in greater detail the conclusion that completion of the project would not meaningfully change the numbers of LNG truck trips to and from Fields Point. The EPA also requests there be a quantitatively estimate of the change (1) in the number of truck trips from Everett to Fields Point after the addition of the liquefaction facilities; (2) in deliveries to other sites from National Grid's existing Fields Point LNG storage facility; and (3) the corresponding change in truck-

[78] *Id.*

[79] *Id.* p. 140-42.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

transport-related emissions. The Narragansett Bay Commission expresses concerns that increased traffic impacts are not being properly assessed, and recommends that off-site shipments be addressed in more detail.

80. In its application, National Grid studied potential changes in traffic volumes in the project area and the Providence region.[80] As stated in the EA, according to National Grid, installing liquefaction facilities would not meaningfully change the number of LNG truck trips to and from Fields Point.[81] In response to comments related to traffic congestion, National Grid performed a more detailed study of the transportation of LNG to and from Fields Point.[82] We have reviewed National Grid's assessment of the impact of its proposed project on vehicular traffic, and concur with its finding that the project, overall, will cause no meaningful increase in traffic volumes or noise associated with those volumes. We therefore affirm the EA's determination that construction and operation of the proposed project (including construction and operation of Narragansett Electric's related nonjurisdictional project to upgrade its facilities to provide dedicated electric service to power the new liquefaction equipment) will not significantly increase traffic congestion.

81. Some commenters are concerned that the proposed project will result in additional trips by trucks transporting LNG to or from Fields Point. National Grid acknowledges that after its proposed facilities go into operation, it may elect to send out as many as 1,300 more trucks to transport LNG to LDCs to fill their storage facilities. However, National Grid explains that the LNG supplied from Fields Point "would be a one for one replacement for some of the existing truck deliveries from Everett and Quebec;" i.e., the total number of truck trips in the region would not change, and because Fields Point is closer to the LDC's, the average miles per trip would decrease.[83] We note that adding liquefaction facilities would not alter the capacity of National Grid's LNG storage tank or customers' contract storage volumes, but would, in part, reverse the flow of LNG by truck. Instead of trucks carrying LNG to the storage tank and departing empty, once customers can displace deliveries by truck with deliveries by pipeline, trucks can arrive empty and be filled from the tank. We affirm the conclusion in the EA that operation of

[80] National Grid's Application, Resource Report 5, sections 5.4, 5.7.2, and 5.9.2.4, and Resource Report 10, Table 10.1-1.

[81] EA at p. 39.

[82] National Grid's Answer to Comments on the EA at pp. 5-9.

[83] *Id.* p. 7.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

the Fields Point LNG facility, if modified as proposed, "would not meaningfully change the number of truck trips to and from the Project area."[84]

12. Visual Impacts

82. The Environmental Justice League comments that the project facilities, including vapor fencing, may result in visual impacts on nearby Southside and Washington Park residents. As discussed in the EA and illustrated in figure 2.8.6-2, the 32-foot-high vapor barrier is in close proximity to the existing LNG tank. Therefore, the tallest portion of this vapor barrier will be well within the existing facility's premises and juxtaposed with the much taller LNG tank, and thus will not add appreciably to the facility's visual impact on these communities. Although the 8-foot-high and 12-foot-high portions of the vapor barrier may be visible to some Southside and Washington Park residents, as stated in the EA, "to the degree that the new liquefaction facilities are visible, their appearance would be generally consistent with the industrial character of the existing site and surrounding properties."[85] We affirm the EA's conclusion that the proposed facilities will not result in significant adverse visual impacts.

[84] EA at p. 138. *See also* EA section 2.5.4.2 at p. 39. Note that transportation of hazardous materials by truck must comply with federal, state, and local laws, ordinances, and regulations. The federal requirements for the transportation of hazardous materials by truck are the DOT regulations in 49 C.F.R. pts. 100-199 and 300-399. Within DOT, PHMSA and the Federal Motor Carrier Safety Administration (FMCSA) are charged with administering the safety aspects of hazardous materials transported by truck. PHMSA establishes requirements for packaging, labeling, emergency response, and security for the domestic transportation of hazardous materials. PHMSA's Emergency Response Guidebook is often used by fire fighters, police, and other emergency service personnel who may be the first to arrive at the scene of a transportation incident involving hazardous materials. FMCSA establishes driver licensing and qualification requirements and standards for routing either by the motor carrier or by a state. Truck routing is governed by 49 C.F.R. § 397 and the state. All trucks carrying LNG or other hazardous materials to or from Fields Point will be required to adhere to the above-described safety standards. We have considered transportation of LNG by trucks in other proceedings, and are satisfied these standards are sufficient to ensure public safety and security. *See, e.g., Elba Liquefaction Company, L.L.C,* 155 FERC ¶ 61,219, *order on reh'g,* 157 FERC ¶ 61,195 (2016).

[85] EA at pp. 35-36.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

13. State Agencies' Procedures and Actions

83. Some commenters question the actions of RIDEM and CRMC, and suggest the Commission use its own environmental review process as a forum to remedy what the commenters perceive to be flaws in these state agencies' procedures. Concerns regarding state agencies' procedures are appropriately directed to state authorities, as our authority does not extend to assessing or enforcing state agencies' compliance with their own procedural provisions. RIDEM and CRMC were cooperating agencies in preparing the EA. RIDEM has federally delegated authority to provide the Water Quality Certification required under section 401 of the Clean Water Act,[86] and CRMC has federally delegated authority to determine whether the proposal is consistent with Rhode Island's coastal management plan under section 307 of the Coastal Zone Management Act.[87] National Grid's proposed project cannot go forward unless both state agencies act under delegated authority to issue necessary federal approvals. We advise National Grid, as we routinely advise all applicants, to work with state agencies and comply with their procedures and obligations, provided they are consistent with federal requirements and would not unreasonably delay the construction or operation of the proposed project.[88]

E. Conclusions

84. Based on the analysis in the EA, as supplemented herein, we conclude that if constructed and operated in accordance with National Grid's application and supplements, and in compliance with the environmental conditions in the appendix to this order, our approval of this proposal would not constitute a major federal action significantly affecting the quality of the human environment. Compliance with the environmental conditions appended to our orders is integral to ensuring that the environmental impacts of approved projects are consistent with those anticipated by our

[86] 33 U.S.C. § 1251 *et seq*. (2012).

[87] *See supra* n. 41.

[88] State regulation would be preempted to the extent it interferes or conflicts with federal authority. In a January 17, 2017 letter to RIDEM, Commission staff observed that preemption could apply to the Rhode Island Industrial Property Remediation and Reuse Act (R.I. Gen. Laws § 23-19.14-1 *et seq.*), the Remediation Regulations promulgated thereunder, and the Public Involvement Plan if these state provisions were to interfere or conflict with the Commission's regulatory authority. We reiterate that objections to how state agencies are implementing state laws – e.g., RIDEM's enforcement of state mandates regarding remediation – are appropriately directed to state agencies, as this federal proceeding is not the proper forum to address compliance with state laws.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

environmental analyses. Thus, Commission staff carefully reviews all information submitted. Commission staff will only issue a notice to proceed with an activity when satisfied that the project sponsor has complied with all applicable conditions. We also note that the Commission has the authority to take whatever steps are necessary to ensure the protection of environmental resources during construction and operation of the project, including authority to impose any additional measures deemed necessary to ensure continued compliance with the intent of the conditions of the order, as well as the avoidance or mitigation of unforeseen adverse environmental impacts resulting from project construction and operation.

85. Any state or local permits issued with respect to the jurisdictional facilities authorized herein must be consistent with the conditions of this certificate. The Commission encourages cooperation between natural gas companies and local authorities. However, this does not mean that state and local agencies, through application of state or local laws, may prohibit or unreasonably delay the construction or operation of facilities approved by this Commission.[89]

86. The Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, and exhibits thereto, and comments, and upon consideration of the record,

The Commission orders:

(A) A certificate of public convenience and necessity is issued to National Grid, authorizing it to construct and operate the proposed facilities, as described and conditioned herein, and as more fully described in the application.

(B) The certificate authority issued in Ordering Paragraph (A) is conditioned on National Grid's:

(1) Completion of construction of the proposed facilities and making them available for service within three years of the date of this order pursuant to section 157.20(b) of the Commission's regulations;

[89] *See* 15 U.S.C. § 717r(d) (2012) (state or federal agency's failure to act on a permit considered to be inconsistent with Federal law); *see also Schneidewind v. ANR Pipeline Co.*, 485 U.S. 293, 310 (1988) (state regulation that interferes with FERC's regulatory authority over the transportation of natural gas is preempted); *Dominion Transmission, Inc. v. Summers*, 723 F.3d 238, 245 (D.C. Cir. 2013) (noting that state and local regulation is preempted by the NGA to the extent it conflicts with federal regulation, or would delay the construction and operation of facilities approved by the Commission).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

(2) Compliance with all applicable Commission regulations under the NGA including, but not limited to, Parts 154, 157, and 284, and paragraphs (a), (c), (e), and (f) of section 157.20 of the Commission's regulations;

(3) Compliance with the environmental conditions listed in the appendix to this order; and

(4) Filing written statements affirming that it has executed firm service agreements for volumes and service terms equivalent to those in its precedent agreement, prior to commencing construction.

(C) National Grid's proposed initial rates and the language contained in its pro forma tariff records are approved, as modified in this order. National Grid must make a tariff filing at least 60 days prior to commencement of service to place the rates and tariff records approved herein into effect.

(D) National Grid shall keep separate books and accounts of costs attributable to the proposed incremental services, as described above.

(E) National Grid shall notify the Commission's environmental staff by telephone or e-mail of any environmental noncompliance identified by other federal, state, or local agencies on the same day that such agency notifies National Grid. National Grid shall file written confirmation of such notification with the Secretary of the Commission within 24 hours.

By the Commission. Commissioners Glick and LaFleur are concurring with a joint separate statement attached.

(S E A L)

Nathaniel J. Davis, Sr.,
Deputy Secretary.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

Appendix

Environmental Conditions

As recommended in the environmental assessment (EA) and modified herein, this authorization includes the following conditions:

1. National Grid shall follow the construction procedures and mitigation measures described in its application, supplemental filings (including responses to staff data requests), and as identified in the EA, unless modified by the order. National Grid must:

    a. request any modification to these procedures, measures, or conditions in a filing with the Secretary of the Commission (Secretary);
    b. justify each modification relative to site-specific conditions;
    c. explain how that modification provides an equal or greater level of environmental protection than the original measure; and
    d. receive approval in writing from the Director of the Office of Energy Projects (OEP) before using that modification.

2. The Director of OEP, or the Director's designee, has delegated authority to address any requests for approvals or authorizations necessary to carry out the conditions of the order, and take whatever steps are necessary to ensure the protection of life, health, property, and the environment during construction and operation of the project. This authority shall allow:

    a. the modification of conditions of the order;

    b. stop-work authority and authority to cease operation; and

    c. the imposition of any additional measures deemed necessary to ensure continued compliance with the intent of the conditions of the order as well as the avoidance or mitigation of unforeseen adverse environmental impact resulting from project construction and operation.

3. **Prior to any construction**, National Grid shall file an affirmative statement with the Secretary, certified by a senior company official, that all company personnel, environmental inspectors (EI), and contractor personnel will be informed of the EI's authority and have been or will be trained on the implementation of the environmental mitigation measures appropriate to their jobs **before** becoming involved with construction and restoration activities.

4. The authorized facility locations shall be as shown in the EA, as supplemented by filed maps and diagrams. **As soon as they are available, and before the start of**

20181017-3072 FERC PDF (Unofficial) 10/17/2018

construction, National Grid shall file with the Secretary any revised maps or diagrams for all facilities approved by the order. All requests for modifications of environmental conditions of the order or site-specific clearances must be written and must reference locations designated on these maps/diagrams.

5. National Grid shall file with the Secretary detailed maps/diagrams and aerial photographs at a scale not smaller than 1:6,000 identifying any facility relocations, and staging areas, storage yards, access roads, and other areas that would be used or disturbed and have not been previously identified in filings with the Secretary. Approval for each of these areas must be explicitly requested in writing. For each area, the request must include a description of the existing land use/cover type, documentation of landowner approval, whether any cultural resources or federally listed threatened or endangered species would be affected, and whether any other environmentally sensitive areas are within or abutting the area. All areas shall be clearly identified on the maps/diagrams/aerial photographs. Each area must be approved in writing by the Director of OEP **before construction in or near that area**.

6. **Within 60 days of the acceptance of the Certificate and before construction begins**, National Grid shall file an Implementation Plan for the project for review and written approval by the Director of OEP. National Grid must file revisions to the plan as schedules change. The plan shall identify:

   a. how National Grid will implement the construction procedures and mitigation measures described in its application and supplements (including responses to staff data requests), identified in the EA, and required by the order;
   b. how National Grid will incorporate these requirements into the contract bid documents, construction contracts (especially penalty clauses and specifications), and construction drawings so that the mitigation required at each site is clear to on-site construction and inspection personnel;
   c. how the company will ensure that sufficient personnel are available to implement the environmental mitigation;
   d. company personnel, including EIs and contractors, who will receive copies of the appropriate material;
   e. the location and dates of the environmental compliance training and instructions National Grid will give to all personnel involved with construction and restoration (initial and refresher training as the project progresses and personnel change);
   f. the company personnel (if known) and specific portion of National Grid‘s organization having responsibility for compliance;
   g. the procedures (including use of contract penalties) National Grid will follow if noncompliance occurs; and

20181017-3072 FERC PDF (Unofficial) 10/17/2018

h. for each discrete facility, a Gantt or Program Evaluation and Review Technique chart (or similar project scheduling diagram), and dates for:
   (1) the completion of all required surveys and reports;
   (2) the environmental compliance training of on-site personnel;
   (3) the start of construction; and
   (4) the start and completion of restoration.

7. National Grid shall employ at least one EI. The EI shall be:

   a. responsible for monitoring and ensuring compliance with all mitigation measures required by the order and other grants, permits, certificates, or other authorizing documents;
   b. responsible for evaluating the construction contractor's implementation of the environmental mitigation measures required in the contract (see condition 6 above) and any other authorizing document;
   c. empowered to order correction of acts that violate the environmental conditions of the order, and any other authorizing document;
   d. a full-time position, separate from all other activity inspectors;
   e. responsible for documenting compliance with the environmental conditions of the order, as well as any environmental conditions/permit requirements imposed by other federal, state, or local agencies; and
   f. responsible for maintaining status reports.

8. Beginning with the filing of its Implementation Plan, National Grid shall file updated status reports with the Secretary on a **monthly** basis until all construction and restoration activities are complete. Problems of a significant magnitude shall be reported to the FERC **within 24 hours.** On request, these status reports will also be provided to other federal and state agencies with permitting responsibilities. Status reports shall include:

   a. an update on National Grid's efforts to obtain the necessary federal authorizations;
   b. project schedule, including current construction status of the project and work planned for the following reporting period;
   c. a listing of all problems encountered, contractor nonconformance/ deficiency logs, and each instance of noncompliance observed by the EI during the reporting period (both for the conditions imposed by the Commission and any environmental conditions/permit requirements imposed by other federal, state, or local agencies);
   d. a description of the corrective and remedial actions implemented in response to all instances of noncompliance, nonconformance, or deficiency;
   e. the effectiveness of all corrective and remedial actions implemented;
   f. a description of any landowner/resident complaints which may relate to

compliance with the requirements of the order, and the measures taken to satisfy their concerns; and

g. copies of any correspondence received by National Grid from other federal, state, or local permitting agencies concerning instances of noncompliance, and National Grid's response.

9. National Grid shall employ a special inspector during construction, and a copy of the special inspector's reports shall be included in the **monthly** status reports filed with the Secretary (see condition 8 above). The special inspector shall be responsible for:

a. observing the construction of the liquefaction facility to be certain it conforms to the design drawings and specifications;
b. furnishing inspection reports to the engineer- or architect- of-record and other designated persons. All discrepancies shall be brought to the immediate attention of the contractor for correction, and then if uncorrected, to the engineer- or architect- of-record; and
c. submitting a final signed report stating whether the work requiring special inspection was, to the best of his/her knowledge, in conformance with the approved plans and specifications and the applicable workmanship provisions.

10. National Grid must receive written authorization from the Director of OEP **before commencing construction of any project facilities**. To obtain such authorization, National Grid must file with the Secretary documentation that it has received all applicable authorizations required under federal law (or evidence of waiver thereof).

11. **Prior to construction of the final design**, National Grid shall file with the Secretary the following information, stamped and sealed by the professional engineer-of-record, registered in Rhode Island:

a. quality assurance and quality control procedures to be used for civil/structural design and construction;
b. site preparation drawing and specifications;
c. pile installation drawings and specifications;
d. seismic specifications for procured equipment prior to the issuing of requests for quotations;
e. liquefied natural gas (LNG) facility structures and foundation design drawings and calculations (including prefabricated and field-constructed structures); and
f. condition assessment evaluation of representative existing piles supporting pre-existing structural foundations.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

12. National Grid must receive written authorization from the Director of OEP **prior to introducing hazardous fluids into the project facilities**. Instrumentation and controls, hazard detection, hazard control, and security components/systems necessary for the safe introduction of such fluids shall be installed and functional.

13. **Prior to commencement of service**, National Grid shall file with the Secretary a surface maintenance plan for the perimeter berm, stamped and sealed by the professional engineer-of-record, registered in Rhode Island. The surface maintenance plan shall include procedures to ensure the crest elevation relative to mean sea level will be maintained for the life of the facility considering berm settlement, subsidence, and sea level rise.

14. National Grid must receive written authorization from the Director of OEP **before placing into service the liquefaction facility and other components of the project**. Such authorization will only be granted following a determination that the facilities have been constructed in accordance with FERC approval, can be expected to operate safely as designed, and the rehabilitation and restoration of areas affected by the project are proceeding satisfactorily.

15. **Within 30 days of placing the authorized facilities in service,** National Grid shall file an affirmative statement with the Secretary, certified by a senior company official:

    a. that the facilities have been constructed in compliance with all applicable conditions, and that continuing activities will be consistent with all applicable conditions; or
    b. which of the conditions in the order National Grid has complied with or will comply with. This statement shall also identify any areas affected by the project where compliance measures were not properly implemented, if not previously identified in filed status reports, and the reason for noncompliance.

16. National Grid shall file a full load noise survey with the Secretary **no later than 60 days** after placing the modified Fields Point LNG Facility in service. If a full load condition noise survey is not possible, National Grid shall provide an interim survey at the maximum possible operation and file the full load operational survey **within 6 months**. If the noise attributable to the operation of all of the equipment at the modified Fields Point LNG Facility, under interim or full load conditions, exceeds a day-night sound level of 55 decibels on the A-weighted scale at any nearby NSAs, National Grid shall file a report on what changes are needed and shall install the additional noise controls to meet the level **within 1 year** of the in-service date. National Grid shall confirm compliance with the above requirement by filing a second noise survey with the Secretary **no later than 60 days** after it installs the additional noise controls.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

17. **Prior to construction**, National Grid shall file with the Secretary for review and written approval by the Director of OEP, a plan that specifies how the stormwater collection and treatment system will be lined in order to reduce potential impacts on groundwater resources on site.

18. **Prior to construction**, National Grid shall file with the Secretary for review and written approval by the Director of OEP, an evaluation of how its impoundment rainwater removal systems in the existing Truck Loading Sump area will comply with both the Rhode Island Pollution Discharge Elimination System and Water Quality Regulations.

The following conditions shall apply to this project. Information pertaining to these specific conditions shall be filed with the Secretary for review and written approval by the Director of OEP, or the Director's designee, within the timeframe indicated by each condition. Specific engineering, vulnerability, or detailed design information meeting the criteria specified in Order No. 833 (Docket No. RM16-15-000), including security information, shall be submitted as critical energy infrastructure information pursuant to Title 18 Code of Federal Regulations Section 388.113 [18 C.F.R. § 388.113 (2018)]. See *Critical Electric Infrastructure Security and Amending Critical Energy Infrastructure Information*, Order No. 833, 81 Fed. Reg. 93,732 (Dec. 21, 2016), FERC Stats. & Regs. 31,389 (2016). Information pertaining to items such as offsite emergency response, procedures for public notification and evacuation, and construction and operating reporting requirements will be subject to public disclosure. All information shall be filed a <u>minimum of 30 days</u> before approval to proceed is requested.

19. **Prior to initial site preparation**, National Grid shall file an overall project schedule, which includes the proposed stages of the commissioning plan.

20. **Prior to initial site preparation**, National Grid shall file quality assurance and quality control procedures for construction activities.

21. **Prior to initial site preparation**, National Grid shall file procedures for controlling access during construction.

22. **Prior to construction of the final design,** National Grid shall specify the project fire protection systems and shutdown systems associated with the existing LNG storage tank and its isolation as Seismic Category I.

23. **Prior to construction of the final design**, National Grid shall file change logs that list and explain any changes made from the Front End Engineering Design provided in National Grid's application and filings. A list of all changes with an

20181017-3072 FERC PDF (Unofficial) 10/17/2018

explanation for the design alteration shall be filed and all changes shall be clearly indicated on all diagrams and drawings.

24. **Prior to construction of the final design**, National Grid shall file information/revisions pertaining to National Grid's response numbers 8, 22, 33, 50, 54, 55, 64, and 67 of its September 16, 2017 filing; response numbers 9 and 114 of its September 23, 2016 filing; response number 71 of its September 26, 2016 filing; response numbers 1 and 13 of its May 12, 2017 filing; response number 2 of its June 23, 2017 filing; response numbers 11, 12, 15, and 17 of its October 30, 2017 filing; response numbers 1, 3, 6, 10, and 11 of its March 9, 2018 filing; response numbers 2, 4, 6, 8, and 10 of its April 16, 2018 filing; and response number 1 of its May 4, 2018 filing, which indicated features to be included or considered in the final design.

25. **Prior to construction of the final design**, National Grid shall file a plot plan of the final design showing all major equipment, structures, buildings, and impoundment systems.

26. **Prior to construction of the final design**, National Grid shall file an up-to-date complete equipment list, process and mechanical data sheets, and specifications.

27. **Prior to construction of the final design**, National Grid shall file three-dimensional plant drawings to confirm plant layout for maintenance, access, egress, and congestion.

28. **Prior to construction of the final design**, National Grid shall file up-to-date Process Flow Diagrams with heat and material balances and one complete set of Piping and Instrumentation Diagrams (P&IDs), which include the following information:

    a. equipment tag number, name, size, duty, capacity, and design conditions;
    b. equipment insulation type and thickness;
    c. valve high pressure side and internal and external vent locations;
    d. piping with line number, piping class specification, size, and insulation type and thickness;
    e. piping specification breaks and insulation limits;
    f. all control and manual valves numbered;
    g. relief valves with size and set points; and
    h. drawing revision number and date.

29. **Prior to construction of the final design**, National Grid shall file P&IDs, specifications, and procedures that clearly show and specify the tie-in details required to safely connect the project to the existing LNG facility.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

30. **Prior to construction of the final design**, National Grid shall file a car seal philosophy and a list of all car-sealed and locked valves consistent with the P&IDs.

31. **Prior to construction of the final design**, National Grid shall file a hazard and operability review of the completed design prior to issuing the P&IDs for construction. A list of recommendations resulting from its review and actions taken on the recommendations shall also be included.

32. **Prior to construction of the final design**, National Grid shall file the cause-and-effect matrices for the process instrumentation, fire and gas detection system, and emergency shutdown system. The cause-and-effect matrices shall include alarms and shutdown functions, details of the voting and shutdown logic, and set points.

33. **Prior to construction of the final design**, National Grid shall demonstrate that, for hazardous fluids, piping and piping nipples 2 inches or less in diameter are designed to withstand external loads, including vibrational loads in the vicinity of rotating equipment and operator live loads in areas accessible by operators.

34. **Prior to construction of the final design**, National Grid shall specify that piping specifications for stainless steel piping capable of operating at cryogenic temperatures shall require the inner and outer ring of spiral wound gaskets to be stainless steel.

35. **Prior to construction of the final design**, National Grid shall file the sizing basis and capacity for the final design of the vent stack as well as the pressure and vacuum relief valves for major process equipment, vessels, and storage tanks.

36. **Prior to construction of the final design**, National Grid shall file an updated vacuum relief analysis for the existing LNG tank that considers contingencies in accordance with National Fire Protection Association (NFPA) 59A, and demonstrates that the existing vacuum relief valves are sized to handle these considerations. The analysis shall evaluate the operation of all pumps operating at maximum capacity unless they interlocked or outfitted with a safety instrumented system with a safety integrity level of 2 that limits the operation or flow at or below existing levels.

37. **Prior to construction of the final design**, National Grid shall file electrical area classification drawings.

38. **Prior to construction of the final design**, National Grid shall file drawings and details of how process seals or isolations installed at the interface between a flammable fluid system and an electrical conduit or wiring system meet the requirements of NFPA 59A (2001 edition).

20181017-3072 FERC PDF (Unofficial) 10/17/2018

39. **Prior to construction of the final design**, National Grid shall file details of an air gap or vent installed downstream of process seals or isolations installed at the interface between a flammable fluid system and an electrical conduit or wiring system. Each air gap shall vent to a safe location and be equipped with a leak detection device that shall continuously monitor for the presence of a flammable fluid, alarm the hazardous condition, and shut down the appropriate systems.

40. **Prior to construction of the final design**, National Grid shall provide a means to remove mercury as part of the design to limit concentrations to less than 0.01 micrograms per normal cubic meter or alternatively provide monitoring for mercury by means of an analyzer or preventative maintenance inspections of the heat exchangers and connections for a mercury removal package.

41. **Prior to construction of the final design**, National Grid shall include provisions in the facility plot plan for the possible future installment of a mercury removal system.

42. **Prior to construction of the final design**, National Grid shall file procedures and a method to monitor the LNG density from the liquefaction process facilities to the existing LNG storage tank to aide in the selection of top or bottom fill of the tank and to prevent tank rollover.

43. **Prior to construction of the final design**, National Grid shall file the procedures for pressure/leak tests which address the requirements of American Society of Mechanical Engineers (ASME) VIII and ASME B31.3, as required by 49 C.F.R. Part 193.

44. **Prior to construction of the final design**, National Grid shall file a plan for clean-out, dry-out, purging, and tightness testing. This plan shall address the requirements of the American Gas Association's Purging Principles and Practice required by 49 C.F.R. Part 193, and shall provide justification if National Grid is not using an inert or non-flammable gas for clean-out, dry-out, purging, and tightness testing.

45. **Prior to construction of the final design**, National Grid shall file an updated fire protection evaluation of the proposed facilities carried out in accordance with the requirements of NFPA 59A (2001 edition), Chapter 9.1.2 as required by 49 C.F.R. Part 193. A list of recommendations resulting from its evaluation, supporting justifications, and actions taken on the recommendations shall also be included.

46. **Prior to construction of the final design**, National Grid shall specify that all emergency shutdown valves are to be equipped with open and closed position switches connected to the Distributed Control System/Safety Instrumented System.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

47. **Prior to construction of the final design**, National Grid shall file a drawing showing the location of the emergency shutdown buttons. Emergency shutdown buttons shall be easily accessible, conspicuously labeled, and located in an area which will be accessible during an emergency.

48. **Prior to construction of the final design**, National Grid shall file spill containment system drawings with dimensions and slopes of curbing, trenches, impoundments, and capacity calculations considering any foundations and equipment within impoundments.

49. **Prior to construction of the final design**, National Grid shall file a revised spill conveyance and sump box design that will prevent spills from reaching the cold box and compander foundation.

50. **Prior to construction of the final design**, National Grid shall demonstrate how an LNG spill from the LNG liquefaction rundown line will be safely transferred from the elevated diversion tray to the grade-level liquefaction area trench system and also into the trench system to the existing LNG storage tank containment sump.

51. **Prior to construction of the final design**, National Grid shall file an evaluation of how its impoundment rainwater removal systems complies with 49 C.F.R. section 193.2173 with concurrence from the U.S. Department of Transportation's (DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA) or how it provides an equivalent level of safety with concurrence from PHMSA.

52. **Prior to construction of the final design**, National Grid shall file complete drawings and a list of the hazard detection equipment. The drawings shall clearly show the location and elevation of all detection equipment. The list shall include the instrument tag number, type and location, alarm indication locations, and shutdown functions of the hazard detection equipment. In addition, National Grid shall include in the final design oxygen sensors to be installed in the liquid nitrogen storage area.

53. **Prior to construction of the final design**, National Grid shall file a technical review of its proposed facility design that:

    a. identifies all combustion/ventilation air intake for equipment and buildings and the distances to any possible hazardous fluid release (LNG, flammable refrigerants, flammable liquids, and flammable gases); and
    b. demonstrates that these areas are adequately covered by hazard detection devices and indicates how these devices will isolate or shut down any combustion or ventilation equipment whose continued operation could add to or sustain an emergency.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

20181017-3072 FERC PDF (Unofficial) 10/17/2018

54. **Prior to construction of the final design**, National Grid shall file complete plan drawings and a list of the fixed and wheeled, dry-chemical, and hand-held fire extinguishers, and other hazard control equipment. Drawings shall clearly show the location by tag number of all fixed, wheeled, and hand-held extinguishers. The list shall include the equipment tag number, type, capacity, equipment covered, discharge rate, and automatic and manual remote signals initiating discharge of the units.

55. **Prior to construction of the final design**, National Grid shall file facility plans and drawings that show the location of the firewater and foam systems. Plan drawings shall clearly show the planned location of firewater and foam piping, post indicator valves, and the location and area covered by, each monitor, hydrant, hose, water curtain, deluge system, foam system, water-mist system, and sprinkler. The drawings shall also include piping and instrumentation diagrams of the firewater and foam system.

56. **Prior to construction of the final design**, National Grid shall specify that the firewater flow test meter is equipped with a transmitter and that a pressure transmitter is installed upstream of the flow transmitter. The flow transmitter and pressure transmitter shall be connected to the Distributed Control System and recorded. The firewater main header pressure transmitter shall also be connected to the Distributed Control System and recorded.

57. **Prior to construction of the final design**, National Grid shall specify that it will install a minimum of two firewater jockey pumps.

58. **Prior to construction of the final design**, National Grid shall certify that the final design is consistent with the information provided to the DOT as described in the design spill determination letter dated June 28, 2017 (Accession Number 20170628-4002). In the event that any modification to the design alters the candidate design spills on which the 49 C.F.R. Part 193 siting analysis was based, National Grid shall consult with the DOT on any actions necessary to comply with Part 193.

59. **Prior to construction of the final design**, National Grid shall file the final design details of the pipe shrouding that demonstrates how the shroud design accounts the mechanical forces from a release at maximum pressures and thermal stresses and shock from sudden cryogenic temperatures of a LNG release. In addition, the final design shall consider the installation of the pipe shrouding to ensure that operation and maintenance of equipment and valves is not impacted.

60. **Prior to construction of the final design**, National Grid shall file procedures to maintain and inspect the vapor barriers provided to meet the siting provisions of 49 C.F.R. section 193.2059.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

61. **Prior to commissioning**, National Grid shall file an updated emergency procedures to include the project facilities as well as instructions to handle onsite emergencies related to the hazardous project fluids.

62. **Prior to commissioning**, National Grid shall file a detailed schedule for commissioning through equipment startup. The schedule shall include milestones for all procedures and tests to be completed prior to introduction of hazardous fluids and during commissioning and startup. National Grid shall file documentation certifying that each of these milestones has been completed before issuance of any authorization by the Director of OEP to commence the next phase of commissioning and startup.

63. **Prior to commissioning**, National Grid shall file plans and detailed procedures for testing the integrity of onsite mechanical installation, functional tests, introduction of hazardous fluids, operational tests, and placing the equipment into service.

64. **Prior to commissioning**, National Grid shall tag all equipment, instrumentation, and valves in the field, including drain valves, vent valves, main valves, and car-sealed or locked valves.

65. **Prior to commissioning**, National Grid shall file a tabulated list and drawings of the proposed hand-held fire extinguishers. The list shall include the equipment tag number, extinguishing agent type, capacity, number, and location. The drawings shall show the extinguishing agent type, capacity, and tag number of all hand-held fire extinguishers.

66. **Prior to commissioning**, National Grid shall file updates, addressing the project facilities, in the existing operation and maintenance procedures and manuals, as well as safety procedures.

67. **Prior to commissioning**, National Grid shall provide a detailed training log that demonstrates all operating staff has completed required training.

68. **Prior to introduction of hazardous fluids**, National Grid shall file an evaluation on the snow volume allowance criteria for impoundments that demonstrates National Grid's assertion that a potential LNG spill would sink beneath the snow or provide snow removal procedures that include the new LNG Pump Loading Skid Sub-Containment Sump or include an adequate snow volume allowance with quantitative justification.

69. **Prior to introduction of hazardous fluids**, National Grid shall complete all pertinent tests (Factory Acceptance Tests, Site Acceptance Tests, Site Integration Tests) associated with the Distributed Control System and the Safety Instrumented System that demonstrates full functionality and operability of the system.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

70. **Prior to introduction of hazardous fluids**, National Grid shall complete a firewater pump acceptance test and firewater monitor and hydrant coverage test. The actual coverage area from each monitor and hydrant shall be shown on facility plot plan(s).

71. **Prior to LNG production**, National Grid shall receive written authorization from the Director of OEP. After producing LNG, National Grid shall file weekly reports on the commissioning of the proposed systems that detail the progress toward demonstrating the facilities can safely and reliably operate at or near the design production rate. The reports shall include a summary of activities, problems encountered, and remedial actions taken. The weekly reports shall also include the latest commissioning schedule, including projected and actual LNG production by liquefaction train, LNG storage inventories in the storage tank, and anticipated and actual sendout volumes. Further, the weekly reports shall include a status and list of all planned and completed safety and reliability tests, work authorizations, and punch list items. Problems of significant magnitude shall be reported to the FERC **within 24 hours**.

72. **Prior to commencement of service**, National Grid shall update procedures for offsite contractors' responsibilities, restrictions, and limitations and for supervision of these contractors by National Grid staff.

73. **Prior to commencement of service**, National Grid shall label piping with fluid service and direction of flow in the field, in addition to the pipe labeling requirements of NFPA 59A (2001 edition).

74. **Prior to commencement of service**, National Grid shall notify the FERC staff of any proposed revisions to the security plan and physical security of the plant.

The following measures shall apply **throughout the life** of the project facilities:

75. The facilities shall be subject to regular FERC staff technical reviews and site inspections on at least a **biennial** basis or more frequently as circumstances indicate. Prior to each FERC staff technical review and site inspection, National Grid shall respond to a specific data request, including information relating to possible design and operating conditions that may have been imposed by other agencies or organizations. Up-to-date detailed piping and instrumentation diagrams reflecting facility modifications and provision of other pertinent information not included in the semi-annual reports described below, including facility events that have taken place since the previously submitted semi-annual report, shall be submitted.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

76. National Grid shall report any design modifications and operating problems for the project facilities in the **semi-annual** operational reports filed with the Secretary for the facility.

77. **Semi-annual** operational reports shall be filed with the Secretary to identify changes in facility design and operating conditions; abnormal operating experiences; activities (e.g., liquefied and vaporized quantities, boil off/flash gas, number and volume of trucking, etc.); and plant modifications, including future plans and progress thereof. Abnormalities shall include, but not be limited to, potential hazardous conditions from offsite vessels, storage tank stratification or rollover, geysering, storage tank pressure excursions, cold spots on the storage tanks, storage tank vibrations and/or vibrations in associated cryogenic piping, storage tank settlement, significant equipment or instrumentation malfunctions or failures, non-scheduled maintenance or repair (and reasons therefore), relative movement of storage tank inner vessels, hazardous fluids releases, fires involving hazardous fluids and/or from other sources, negative pressure (vacuum) within a storage tank, and higher than predicted boil off rates. Adverse weather conditions and the effect on the facility also shall be reported. Reports shall be submitted **within 45 days after each period ending June 30 and December 31**. In addition to the above items, a section entitled "Significant Plant Modifications Proposed for the Next 12 Months (dates)" shall be included in the semi-annual operational reports. Such information will provide the FERC staff with early notice of anticipated future construction/maintenance at the LNG facilities.

78. The plant's incident reporting requirements shall be updated to the following: significant non-scheduled events, including safety-related incidents (e.g., LNG, heavier hydrocarbons, refrigerant, or natural gas releases, fires, explosions, mechanical failures, unusual over pressurization, and major injuries) and security-related incidents (e.g., attempts to enter site, suspicious activities) shall be reported to FERC staff. In the event an abnormality is of significant magnitude to threaten public or employee safety, cause significant property damage, or interrupt service, notification shall be made **immediately**, without unduly interfering with any necessary or appropriate emergency repair, alarm, or other emergency procedure. In all instances, notification shall be made to FERC staff **within 24 hours**. This notification practice shall be incorporated into the LNG facility's emergency plan. Examples of reportable hazardous fluids related incidents include:

    a. fire;
    b. explosion;
    c. estimated property damage of $50,000 or more;
    d. death or personal injury necessitating in-patient hospitalization;
    e. release of hazardous fluids for five minutes or more;
    f. unintended movement or abnormal loading by environmental causes, such

20181017-3072 FERC PDF (Unofficial) 10/17/2018

as an earthquake, landslide, or flood, that impairs the serviceability, structural integrity, or reliability of an LNG facility that contains, controls, or processes hazardous fluids;

g. any crack or other material defect that impairs the structural integrity or reliability of an LNG facility that contains, controls, or processes hazardous fluids;

h. any malfunction or operating error that causes the pressure of a pipeline or LNG facility that contains or processes hazardous fluids to rise above its maximum allowable operating pressure (or working pressure for LNG facilities) plus the build-up allowed for operation of pressure limiting or control devices;

i. a leak in an LNG facility that contains or processes hazardous fluids that constitutes an emergency;

j. inner tank leakage, ineffective insulation, or frost heave that impairs the structural integrity of an LNG storage tank;

k. any safety-related condition that could lead to an imminent hazard and cause (either directly or indirectly by remedial action of the operator), for purposes other than abandonment, a 20 percent reduction in operating pressure or shutdown of operation of a pipeline or an LNG facility that contains or processes hazardous fluids;

l. safety-related incidents to hazardous fluids transportation occurring at or en route to and from the LNG facility; or

m. an event that is significant in the judgment of the operator and/or management even though it did not meet the above criteria or the guidelines set forth in an LNG facility's incident management plan.

In the event of an incident, the Director of OEP has delegated authority to take whatever steps are necessary to ensure operational reliability and to protect human life, health, property or the environment, including authority to direct the LNG facility to cease operations. Following the initial company notification, FERC staff will determine the need for a separate follow-up report or follow-up in the upcoming semi-annual operational report. All company follow-up reports shall include investigation results and recommendations to minimize a reoccurrence of the incident.

20181017-3072 FERC PDF (Unofficial) 10/17/2018

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

National Grid LNG LLC Docket No. CP16-121-000

(Issued October 17, 2018)

GLICK, Commissioner, and LaFLEUR, Commissioner, *concurring*:

20181017-3072 FERC PDF (Unofficial) 10/17/2018

We concur in the Commission's decision to grant National Grid LNG LLC authorization to add liquefaction facilities at its existing Fields Points liquefied natural gas storage facility under section 7 of the Natural Gas Act.[1] We write separately to highlight the need to evaluate the significance of all environmental effects under the National Environmental Policy Act, including greenhouses gas (GHG) emissions. We agree with today's finding that the liquefaction facility will not have a significant effect on the environment,[2] particularly given the limited GHG emissions associated with the project.[3] However, we disagree with the language in the Environmental Assessment that dismisses the Social Cost of Carbon as a useful tool to inform the environmental review, stating the Social Cost of Carbon method "cannot meaningfully inform the Commission's decision whether and how to authorize a proposed project under the NGA."[4] We believe the Social Cost of Carbon provides a meaningful and informative approach for an agency to consider how its actions contribute to the harm caused by climate change.[5] By translating the long-term damage done by a ton of carbon dioxide into monetary value, the Social Cost of Carbon offers a method for linking GHG emissions to particular climate impacts, helping satisfy our obligation to consider how the Commission's actions contribute to the harm caused by climate change.

For these reasons, we respectfully concur.

Richard Glick Commissioner	Cheryl A. LaFleur Commissioner

RIPDES Permit No. RIR1#####

AUTHORIZATION TO DISCHARGE UNDER THE
RHODE ISLAND POLLUTANT DISCHARGE ELIMINATION SYSTEM

GENERAL PERMIT FOR STORMWATER DISCHARGE ASSOCIATED WITH CONSTRUCTION ACTIVITY

In compliance with the provisions of Chapter 46-12 of the Rhode Island general Laws, as amended, except as provided in Part I.B.3 of the permit, operators of stormwater discharges associated with construction activity located in the State of Rhode Island are authorized to discharge in accordance with the conditions and requirements set forth herein.

Operators of stormwater discharges associated with construction activity within Rhode Island who intend to be authorized by this general permit must meet the application requirements outlined in Part I.D.1 of the permit. Authorization to discharge shall be granted in accordance with Part I.D of this permit.

This general permit shall become effective on September 26, 2018.

The general permit and the authorization to discharge expire at midnight, two years from the effective date, or September 25, 2020.

Signed this 26TH day of September, 2018.

Eric A Beck, PE, Chief
Groundwater and Wetlands Protection
Office of Water Resources
Rhode Island Department of Environmental Management
Providence, Rhode Island

General Permit
Rhode Island Pollutant Discharge Elimination System
Stormwater Discharge Associated with Construction Activity

Effective Date: September 26, 2018

Valid ONLY in accordance with Part I.D.

Expiration Date: September 25, 2020

RHODE ISLAND POLLUTANT DISCHARGE ELIMINATION SYSTEM
STORMWATER DISCHARGE ASSOCIATED WITH CONSTRUCTION ACTIVITY

PLEASE READ THIS PERMIT CAREFULLY!

The RIPDES Program of the Office of Water Resources realizes that effective regulatory mechanisms to control erosion and sedimentation are currently required by the RIDEM Freshwater Wetland Program, the RIDEM Water Quality Certification Program, the RIDEM UIC/Groundwater Discharge Permit Program, the RI Coastal Resources Management Council (CRMC); and in those towns/cities which have a Qualifying Local Program (QLP) that has been formally approved by the Department (see RIPDES Rule 15.01(i) for the definition of Qualifying State, or Local Programs). **Regardless of the means of obtaining approval, the permittee is still responsible for complying with all terms and conditions of this permit and any other applicable State, local and/or federal regulations. The Department will be held harmless for any failure of the permittee to comply with this permit.**

I. GENERAL COVERAGE UNDER THIS PERMIT

A. Permit Area. This permit applies to all areas of the State of Rhode Island.

B. Eligibility

1. Allowable Stormwater Discharges. Subject to compliance with the terms and conditions of this permit, you are authorized to discharge the following:

(a) All new and existing stormwater discharges associated with construction, including, but not limited to, clearing, grading, excavation, and filling, where total land disturbance is equal to or greater than one (1) acres including construction activities involving soil disturbance`s of less than one (1) acre of disturbance if that construction is part of a larger common plan of development or sale that would disturb one (1) or more acre, and the discharge is composed entirely of stormwater. A discharge shall be considered composed entirely of stormwater if there is adequate access to sample the stormwater discharge covered under this permit prior to mixing with a discharge which is authorized and in compliance with an existing RIPDES permit or the discharge is listed in Part I.B.2. below.

(b) Stormwater Discharges from support activities (e.g., concrete or asphalt batch plants, equipment staging areas, material storage areas, excavated material disposal areas, borrow areas) provided:

(i) The support activity is directly related to the construction site required to have a RIPDES permit coverage for discharges of stormwater associated with construction activity; and

(ii) The support activity is not a commercial operation serving multiple unrelated construction projects by different operators, and does not operate beyond the completion of the construction at the last construction project it supports; and

(iii) Appropriate controls and measures are identified in a Soil Erosion and Sediment Control Plan covering the discharges from the support activity areas; and

(c) Discharges composed of allowable discharges listed in Part I.B.2 of this permit commingled with a discharge authorized by a different RIPDES permit and/or discharge that does not require a RIPDES permit authorization.

2. Allowable Non-Stormwater Discharges. Allowable non-stormwater discharges under this permit are limited to discharges from the following:

   (a) washing of vehicles provided chemicals, soaps, detergents, steam, or heated water are not used; cleaning is restricted to the outside of the vehicle (e.g., no engines, transmissions, undercarriages, or truck beds); or washing is not used to remove accumulated industrial materials, paint residues, heavy metals or any other potentially hazardous materials from surfaces;

   (b) the use of water to control dust;

   (c) fire fighting activities;

   (d) fire hydrant flushings;

   (e) natural springs; uncontaminated groundwater;

   (f) lawn watering;

   (g) potable water sources including waterline flushings; irrigation drainage;

   (h) pavement wash waters where spills or leaks of toxic or hazardous materials have not occurred (unless all spilled materials have been removed) and where detergents are not used;

   (i) foundation or footing drains where flows are not contaminated with process materials such as solvents or contaminated by contact with soils where spills or leaks of toxic or hazardous materials has occurred.

   If any of these discharges may reasonably be expected to be present and to be mixed with stormwater discharges, they must be specifically identified in the site's Soil Erosion and Sediment Control Plan as described in Part III of this permit.

3. Limitations of Coverage. The following discharges associated with construction are not authorized by this permit.

   (a) Stormwater discharges associated with construction that the Director of the Department of Environmental Management has found to be or may reasonably be expected to be contributing to a violation of water quality standards, or to be a significant contributor of pollutants;

   (b) Stormwater discharges associated with construction, allowable non-stormwater discharges and discharge related activities that adversely affect a listed, or a proposed to be listed, endangered or threatened species or its critical habitat;

   (c) Stormwater associated with construction discharging into any water for which a Total Maximum Daily Load (TMDL) has been either established or approved by the EPA or other water quality determination unless the Stormwater Management Plan incorporates measures or controls that meet the requirements of this permit and are consistent with the assumptions and requirements of the TMDL and Minimum Standard 3: Water Quality of the RIDISM or the project was authorized and has maintained coverage under the 2013 permit (e.g. a RIPDES or a RIDEM Freshwater Wetlands Permit, RIDEM Water Quality Certification, RIDEM UIC/Groundwater Discharge Permit, CRMC Assent or QLP approval remains in effect). If the EPA approved or established TMDL or other water quality determination specifically prohibits the discharges, the discharges are not eligible for coverage under this permit.

(d) Stormwater associated with construction discharging into any Impaired water listed on the latest State of Rhode Island 303(d) List of Impaired Waters, unless the Stormwater Management Plan incorporates measures or controls that meet the requirements of this permit and address the pollutant(s) of concern as required by Standard 3: Water Quality of the RISDISM or if the project was authorized and has maintained coverage under the 2013 permit (e.g. a RIPDES or a RIDEM Freshwater Wetlands Permit, RIDEM Water Quality Certification, RIDEM UIC/Groundwater Discharge Permit, CRMC Assent or QLP approval remains in effect).

(e) Post-construction discharges that originate from the site after construction activities have been completed and the site has achieved final stabilization, including any temporary support activity. Post-construction stormwater from industrial sites may need to be covered by a separate RIPDES individual permit or may need to obtain authorization to discharge under the RIPDES Multi-Sector General Permit for Stormwater Discharge Associated with Industrial Activity. Guidance for managing discharges from industrial sites can be found in Part II.C of this permit.

C. Definition of "Owner" & "Operator":

1. For the purposes of this permit, the "owner" of a property is the person, as defined by Rule 3 of the RIPDES Regulations, holding the title, deed, or legal document to the regulated property, facility, or activity, including a party working under an easement on the property.

2. The "operator" is defined as the person who has operational control over plans and specifications, or the person who has day-to-day supervision and control of activities occurring at the site. Further, for purposes of this permit, the operator is the owner if that person is performing all work related to complying with this permit.

   Where a new operator is selected after the submittal of an NOI and that new operator is directly responsible for performing the work necessary to comply with this permit, prior to performing any work at the site the new operator must sign and certify within the Soil Erosion and Sediment Control Plan document that they are the operator of the site as defined above.

D. Authorization. To be covered under this general permit, owners or operators of stormwater discharges associated with construction activities that disturb one (1) or more acres or less than one (1) acre if that construction is part of a larger common plan of development or sale that would disturb one (1) or more acre, must comply with the applicable sections below.

1. Application Requirements

(a) Sites Previously Authorized under the 2013 Construction Activity General Permit are not required to reapply to maintain authorization.

(b) New Applications – Submittal of an NOI is only required for construction activities that disturb greater than one (1) acre that are not required to obtain a RIDEM Freshwater Wetlands Permit, RIDEM Water Quality Certification, RIDEM UIC/Groundwater Discharge Permit, CRMC Assent or QLP approval. Specific application requirements are as follows:

(i) Construction activities that disturb an area equal to or greater than five (5) acres are required to submit a complete NOI form and supporting documentation required in Part IV of this permit.

(ii) Construction activities that disturb an area equal to or greater than one (1) acre and less than five (5) acres are required to submit a complete NOI form, project narrative and site plan/map showing flow paths, discharges, and receiving waters.

2. Deadlines for Requesting Authorization

   (a) For stormwater discharges associated with construction activities which were authorized under the 2013 Construction Activity General Permit which are expected to continue beyond the effective date of this permit, the owner is not required to reapply, to maintain permit coverage in accordance with Part I.D.3 of this permit.

   (b) For stormwater discharges associated with construction activities which commence after the effective date of this permit, and are required to submit an NOI in accordance with Part I.D.1.b of this permit, an NOI must be submitted at least thirty (30) days prior to the commencement of land disturbing activities.

3. Granting of Authorization

   (a) Owners and operators previously authorized under the 2013 Construction Activity General Permit with an active RIDEM Freshwater Wetlands Permit, RIDEM Water Quality Certification, RIDEM UIC/Groundwater Discharge Permit, CRMC Assent or QLP approval will be authorized upon the effective date of this permit.

   (b) Owners and operators previously authorized under the 2013 Construction Activity General Permit will be authorized upon the effective date of this permit.

   (c) Construction activities that disturb an area equal to or greater than one (1) acre that are required to obtain a RIDEM Freshwater Wetlands permit, RIDEM Water Quality Certification, RIDEM UIC/Groundwater Discharge Permit, CRMC Assent or QLP approval are authorized to discharge stormwater from construction activities under the terms and conditions of this permit upon receipt of all of the applicable permits listed here.

   (d) For construction activities that disturb an area equal to or greater than five (5) acres and are not required to obtain one of the approvals listed above in Part I.D.3.c, authorization to discharge will only be granted upon notification from the Director after review of the NOI and Stormwater Management Plan.

   (e) For construction activities that disturb an area equal to or greater than one (1) acre and less than five (5) acres and are not required to obtain one of the approvals listed in Part I.D.3.c automatic authorization to discharge will be granted upon receipt of the information required in Part I.D.1.b.ii unless notified to the contrary by the Director.

E. Termination of Coverage. Upon achieving final site stabilization, owners and operators of stormwater discharges associated with construction must submit to the DEM a completed Notice of Termination (NOT). At a minimum, the following information is required to terminate coverage under this permit:

1. The owner's name, mailing address, email address, and telephone number,
2. The operator's name, mailing address, email address, and telephone number,
3. The name and location of the facility,
4. The RIPDES Construction General Permit authorization number,
5. A signed certification by the owner and operator that the stormwater discharge associated with construction activity no longer exists at the site.

Upon DEM receipt of the completed NOT coverage under this permit is terminated.

F. Failure to Notify. Owners or operators who fail to notify the Director of their intent to be covered under a general permit, and discharge pollutants to the waters of the State or to a separate storm sewer system without

a RIPDES permit, are in violation of Chapter 46-12 of Rhode Island General Laws and the Clean Water Act (CWA).

II. PERMIT LIMITS AND CONDITIONS

To be covered under this permit you must develop a Stormwater Management Plan prior to submitting your NOI or your application for RIDEM Freshwater Wetlands Permit, RIDEM Water Quality Certification, RIDEM UIC/Groundwater Discharge Permit, CRMC Assent or QLP approval. In accordance with the *Rhode Island Stormwater Design and Installation Standards Manual* (RISDISM), the Stormwater Management Plan must include the following major elements, which serve to satisfy the eleven Minimum Standards outlined in the RISDISM, as well as comply with specific criteria for the site planning process, groundwater recharge, water quality, channel protection, and peak flow control requirements:

A. **Stormwater Site Planning, Analysis, and Design** – This element of the Stormwater Management Plan must address the following Minimum Standards and include supporting documentation and calculations:

1. Minimum Standard 1: LID Site Planning and Design Strategies
2. Minimum Standard 2: Groundwater Recharge,
3. Minimum Standard 3: Water Quality,
4. Minimum Standard 4: Conveyance and Natural Channel Protection,
5. Minimum Standard 5: Overbank Flood Protection,
6. Minimum Standard 6: Redevelopment and Infill Projects.
7. Minimum Standard 8: Land Uses with Higher Potential Pollutant Loads (LUHPPLs)
8. Minimum Standard 9: Illicit Discharges

In addition, the following Appendices from the RISDISM provide additional guidance on how to comply with the above listed standards:

9. Appendix B: Vegetation Guidelines and Planting List
10. Appendix C: Guidance for Retrofitting Existing Development for Stormwater Management
11. Appendix F: Guidance on BMP Construction Specifications
12. Appendix I: Rhode Island River and Stream Order
13. Appendix K: Hydrologic and Hydraulic Modeling Guidance

B. **Soil Erosion, Runoff, and Sediment Control** – In order to comply with this permit a component of the Stormwater Management Plan must address two sources of stormwater pollution: (1) pollution caused by soil erosion, runoff, and sedimentation during construction and (2) stormwater pollution generated as a direct result of the construction activity itself (i.e. stormwater contaminated by construction wastes and practices). The Stormwater Management Plan must satisfy Part III of this permit and Minimum Standard 10 of the RISDISM – Construction Erosion and Sedimentation Control. In order to facilitate an expeditious DEM review and make it easier for the site owner and operator to comply with applicable soil erosion and sediment control requirements, it is recommended that a Soil Erosion and Sediment Control Plan be developed as a stand alone document.

C. **Post Construction Operation and Maintenance** – The Stormwater Management Plan must address *Minimum Standard 11*: *Stormwater Management System Operation and Maintenance* of the RISDISM to ensure that the stormwater management system constructed will continue to function as designed. The Plan must address the O&M requirements for each stormwater management practice in Chapter 5 of the RISDISM. Additional guidance on developing O&M plans can be found in Appendix E of the RISDISM. In addition the Plan must address *Minimum Standard 7: Pollution Prevention* of the RISDISM by incorporating source control and pollution prevention measures to minimize the impact that the land use may have on stormwater runoff quality after the construction development activities have been completed and the site is fully stabilized. Additional guidance can be found in Appendix G of the RISDISM. In order to facilitate an expeditious DEM

review and make it easier for the site owner(s) to comply with applicable Operation and Maintenance requirements, it is recommended that an Operation and Maintenance Plan be developed as a stand alone document.

The facility may be required to obtain authorization to discharge under the RIPDES Multi-Sector General Permit for Stormwater Discharge Associated with Industrial Activity depending on the Standard Industrial Classification that will be applicable to the site when construction is complete. In these cases the Stormwater Management Plan should address the requirements of the RIPDES Multi-Sector General Permit for Stormwater Discharge Associated with Industrial Activity.

III. SOIL EROSION AND SEDIMENT CONTROL (SESC) PLAN REQUIREMENTS

A. The Soil Erosion and Sediment Control (SESC) Plan shall describe and ensure the implementation of stormwater control measures which are to be used to reduce or eliminate pollutants in stormwater discharge(s) from the site and assure compliance with the terms and conditions of this permit. Control practice selection shall include an evaluation of the effectiveness of available practices and be made with proper references.

B. Soil erosion, runoff, sediment, and pollution prevention control measures must be designed, implemented, and maintained in accordance with the requirements of this permit and in accordance with the design specifications and guidance contained in the *Rhode Island Soil Erosion and Sediment Control (RISESC) Handbook* (as amended) and the *Rhode Island Stormwater Design and Installation Standards Manual (RISDISM)* (as amended).

C. The SESC Plan shall be stamped and signed by a Registered Professional Engineer, a Certified Professional in Erosion and Sediment Control (CPESC), a Certified Professional in Stormwater Quality (CPSWQ), or a Registered Landscape Architect certifying that the SESC Plan meets all requirements of this permit. SESC Plans which require the practice of engineering must be stamped and signed by a Registered Professional Engineer.

D. If the SESC Plan is not required to be submitted along with the NOI (see Part I.D of this permit), then the owner, operator, or other designated person under the supervision of the owner or operator shall make it available to the Department upon request.

E. If the SESC Plan is requested and reviewed by the Director, he or she may notify the permittee at any time that it does not meet one or more of the minimum requirements of this permit. After such notification from the Director, the permittee shall amend the SESC Plan and shall submit to the Director, within seven (7) days of the notification, a written certification that the required changes have been made.

F. The owner and operator shall amend the SESC Plan within seven (7) days whenever there is a change in design, construction, operation, maintenance or other procedure which has a significant effect on the potential for the discharge of pollutants, or if the SESC Plan proves to be ineffective in achieving its objectives. In addition, the SESC Plan shall be amended to identify any new operator that will implement a component of the SESC Plan. The amended SESC Plan must be kept on file at the construction site and any SESC Plan modifications must be documented. Any amendments to control measures which involved the practice of engineering, must first be reviewed, signed, and stamped by a Professional Engineer registered in the State of Rhode Island. The DEM reserves the right to review any SESC Plan amendments in the same manner as described in paragraph III.E.

G. A copy of the SESC Plan including site plans, amendments to the SESC Plan and site plans, records of inspections, maintenance, and corrective actions, a copy of the NOI, and any regulatory permits granted must be kept on site at all times during the extent of coverage under this permit. The site operator as defined by Part I.C.2 of this permit must maintain a copy of the SESC Plan at a central location on-site for the use of all those identified as having responsibilities under the SESC Plan whenever they are on the construction site. If

an on-site location is unavailable to store the SESC Plan and associated records when no personnel are present, notice of the SESC Plan's location must be posted near the main entrance of the construction site.

H. Each project authorized under this permit must determine if the site is within or directly discharges to a Natural Heritage Area (NHA). DEM Natural Heritage Areas include known occurrences of state and federal rare, threatened and endangered species. Review DEM NHA maps to determine if there are natural heritage areas on or near the construction site.

I. List and provide existing data (if available) on the quality of known discharges from the site. The SESC Plan must identify any stormwater discharge associated with industrial activity other than construction if applicable.

J. Soil Erosion and Sediment Control Plans: Required Contents

1. **Erosion, Runoff, and Sediment Control Requirements –** Owners and Operators must design, install, and maintain effective erosion, runoff, and sediment controls that address the nature of stormwater run-on and runoff at the site, including factors such as expected flow from impervious surfaces, slopes, and site drainage features. If stormwater flow will be channelized at the site, site owners and operators must design temporary stormwater controls that will control peak flow rates and total stormwater volume, to minimize channel and stream bank erosion in the immediate vicinity of discharge points. These controls must be designed to address the range of soil particle sizes expected to be present, site soils, slope, and the expected amount, frequency, intensity, and duration of precipitation. At a minimum the following must be addressed:

(a) Phase Construction Activity – describe the intended construction sequencing and timing of major activities, including grading activities, road and utility installation, and building phases. The estimated timetable and sequence of construction activities must address the following key activities:

(i) Installation of erosion, runoff, and sediment controls and temporary pollution prevention measures.

(ii) Protection of planned infiltration sites and qualifying pervious areas from compaction.

(iii) Inspection and maintenance of erosion, runoff, sediment controls and other temporary pollution prevention measures.

(iv) Final site stabilization and removal of temporary erosion, runoff, and sediment controls and temporary pollution prevention measures.

(b) Control Stormwater Flowing Onto and Through the Project – Describe controls that will be used to divert flows from exposed soils, retain or detain flows, or otherwise limit runoff and the discharge of pollutants from exposed areas of the site. A description of controls, including design specifications and details must be provided.

(c) Stabilize Soils – Describe controls that will be used to stabilize soils throughout the entire duration of the construction project, including phased clearing/grubbing, initiating stabilization practices, and maintaining stabilization practices. Soil stabilization of disturbed areas must, at a minimum be initiated immediately whenever any clearing, grading, excavating or other earth disturbance activities have permanently ceased on any portion of the site, or temporarily ceased on any portion of the site and will not resume for a period exceeding fourteen (14) calendar days. Stabilization must be completed using vegetative stabilization measures or using alternative measures whenever vegetative measures are deemed impracticable or during periods of drought.

(d) Protect Storm Drain Inlets – Describe controls, including design specifications and details, that will

be used to prevent soil and debris from entering storm drain inlets. If stormwater discharges from the construction site have the potential to enter storm drain inlets that then discharge to a surface water, the site owner and operator must:

a. *Installation Requirements:* Install inlet protection practices that remove sediment from the discharge prior to entry into the storm drain inlet.

b. *Maintenance Requirements:* Clean, or remove and replace, the protection practices as sediment accumulates, the filter becomes clogged, and/or performance is compromised. Accumulated sediment adjacent to the inlet protection measures should be removed by the end of the same work day in which it is found or by the end of the following work day if removal by the same work day is not feasible.

(e) Protect Storm Drain Outlets - Describe controls, including design specifications and details, to be used to protect outlets discharging stormwater from the project. Outfall protection must be used to prevent scour or severe erosion at discharge points. The function of the specified controls must be to protect the soil surface, reduce velocity, and promote infiltration.

(f) Establish Perimeter Controls and Sediment Barriers – Describe controls, including selection criteria and details, to be used to prevent soil erosion, filter, and trap sediment before it leaves the construction site.

a. *Installation Requirements*: Sediment controls must be installed along those perimeter areas of the site that will receive stormwater from earth disturbing activities.

b. *Maintenance Requirements*: Maintenance of perimeter controls and sediment barriers must be completed in accordance with the maintenance requirements specified in the RISESC Handbook (as amended).

(g) Establish Temporary Controls For The Protection of Post Construction Stormwater Practices – Identify the temporary practices that will be installed to protect permanent or long-term stormwater practices as they are installed and throughout the construction phase of the project so that they will function properly when they are brought online. Examples of long-term practices that may require protection include: infiltration basins, open vegetated swales and natural depressions, vegetated buffer strips, and permanent detention/retention structures. Examples of temporary control measures that can be used to protect permanent stormwater control measures include: establishing temporary sedimentation barriers around infiltrating practices, ensuring proper material staging areas and equipment routing (i.e. do not allow construction equipment to compact areas where infiltrating practices will be installed), and by conducting final cleaning of structural long-term practices after construction is completed.

(h) Temporary Sediment Trapping and Temporary Stormwater Conveyance Practices – Describe the need for temporary sediment trapping and temporary stormwater conveyance practices, and if required include design specifications and details which demonstrate that they comply with Minimum Standard 10 of the RISDISM.

(i) Utilize Surface Outlets – To the maximum extent practicable, outlet structures must be utilized that withdraw water from the surface of temporary sedimentation basins, in order to minimize the discharge of pollutants. Exceptions may include periods of extended cold weather, where alternate outlets are required during frozen periods. If such a device is infeasible for portions of or the entire construction period justification must be made in the SESC Plan.

(j) Properly Use Treatment Chemicals - If the owner and/or operator plans to utilize polymers, flocculants, or other treatment chemicals at the construction site (e.g. dewatering, temporary sediment

traps, stormwater conveyance practices, soil stabilization), the use of such chemicals must be managed in accordance with current best management practices and in accordance with the requirements of the *Rhode Island Soil Erosion and Sediment Control (RISESC) Handbook* (as amended).

2. **Construction Activity Pollution Prevention Requirements** – The purpose of pollution prevention is to prevent daily construction activities from causing pollution. The owner and operator must design, install, implement, and maintain effective pollution prevention practices to minimize the discharge of pollutants. Pollution prevention practices must be described that will serve to control pollutants used at the site. At a minimum pollution prevention measures must address the following:

   (a) Prohibited Discharges - The following discharges are prohibited at the construction site:

      (i) Contaminated groundwater, unless specifically authorized by the DEM. These types of discharges may only be authorized under a separate DEM RIPDES permit.

      (ii) Wastewater from washout of concrete, unless the discharge is contained and managed by appropriate controls.

      (iii) Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds, and other construction materials.

      (iv) Fuels, oils, or other pollutants used in vehicle and equipment operation and maintenance. Proper storage and spill prevention practices must be utilized at all construction sites.

      (v) Soaps or solvents used in vehicle and equipment washing.

      (vi) Toxic or hazardous substances from a spill or other release.

   (b) Minimize Off-Site Tracking of Sediments – Describe the location(s) of vehicle entrance(s) and exit(s), and stabilization practices used to prevent sediment from being tracked off-site. Sediment track-out must be minimized onto off-site streets, other paved areas, and sidewalks from vehicles exiting the construction site. Site owners and operators must:

      (i) Restrict vehicle use to properly designated exit points.

      (ii) Use properly designed and constructed construction entrances at all points that exit onto paved roads so that sediment removal occurs prior to vehicle exit.

      (iii) When and where necessary, use additional controls to remove sediment from vehicle tires prior to exit (i.e. wheel washing racks, rumble strips, and rattle plates).

      (iv) Where sediment has been tracked out from the construction site onto the surface of off-site streets, other paved areas, and sidewalks, the deposited sediment must be removed by the end of the same work day in which the trackout occurs. Track-out must be removed by sweeping, shoveling, or vacuuming these surfaces, or by using other similarly effective means of sediment removal. Operators are prohibited from hosing or sweeping tracked-out sediment into any stormwater conveyance, storm drain inlet, or surface water.

   (c) Proper Waste Disposal – Identify potential building materials and other construction wastes and document how these wastes will be properly managed and disposed of at the construction site. All types of wastes generated at the site must be disposed of in a manner consistent with State Law and/or regulations.

(d) Spill Prevention and Control – All chemicals and/or hazardous waste material must be stored properly and legally in covered areas, with containment systems constructed in or around the storage areas. Areas must be designated for materials delivery and storage. All areas where potential spills can occur, and their accompanying drainage points must be described. The owner and operator must establish spill prevention and control measures to reduce the chance of spills, stop the source of spills, contain and clean-up spills, and dispose of materials contaminated by spills. The operator must establish and make highly visible location(s) for the storage of spill prevention and control equipment and provide training for personnel responsible for spill prevention and control on the construction site.

(e) Control of Allowable Non-Stormwater Discharges – Allowable non-stormwater discharges as established in Part I.B.2 of this permit should be kept separate from stormwater flow through the use of appropriate control measures. The owner and operator must identify all allowable non-stormwater discharges associated with construction activity and describe the controls and measures that will be implemented at those locations to minimize pollutant contamination where applicable.

(f) Control Dewatering Practices – Describe dewatering practices that will be implemented if water must be removed from an area so that construction activity can continue. Site owners and operators are prohibited from discharging groundwater or accumulated stormwater that is removed from excavations, trenches, foundations, vaults, or other similar points of accumulation, unless such waters are first effectively managed by appropriated control measures. Examples of appropriate control measures include, but are not limited to, temporary sediment basins or sediment traps, sediment socks, dewatering tanks and bags, or filtration systems (e.g. bag or sand filters) that are designed to remove sediment. Uncontaminated, non-turbid dewatering water can be discharged without being routed to a control. At a minimum the following discharge requirements must be met for dewatering activities:

(i) Do not discharge visible floating solids or foam.

(ii) To the extent feasible, utilize vegetated, upland areas of the site to infiltrate dewatering water before discharge. In no case will surface waters be considered part of the treatment area.

(iii) At all points where dewatering water is discharged utilize velocity dissipation devices.

(iv) With filter backwash water, either haul it away for disposal or return it to the beginning of the treatment process.

(v) Replace and clean the filter media used in dewatering devices when the pressure differential equals or exceeds the manufacturer's specifications.

(vi) Dewatering practices must involve the implementation of appropriate control measures as applicable (i.e. containment areas for dewatering earth materials, portable sediment tanks and bags, pumping settling basins, and pump intake protection).

(g) Establish Proper Building Material Staging Areas - Describe construction materials expected to be stored on-site and procedures for storage of materials to minimize exposure of the materials to stormwater. Minimization of exposure is not required in cases where the exposure to precipitation and to stormwater will not result in a discharge of pollutants, or where exposure of a specific material or product poses little risk of stormwater contamination (such as final products and materials intended for outdoor use).

(h) Control Discharges from Stockpiled Sediment or Soil - Stockpile management consists of procedures and practices designed to minimize or eliminate the discharge of stockpiled material (soil, topsoil, base material, rubble) from entering drainage systems or surface waters. For any stockpiles or land

clearing debris composed, in whole or in part, of sediment or soil, you must comply with the following requirements:

(i) Locate piles within the designated limits of disturbance.

(ii) Protect from contact with stormwater (including run-on) using a temporary perimeter sediment barrier.

(iii) Where practicable provide cover or appropriate temporary vegetative or structural stabilization to avoid direct contact with precipitation or to minimize the discharge of sediments.

(iv) Do not hose down or sweep soil or sediment accumulated on pavement or other impervious surfaces into any stormwater conveyance, storm drain inlet, or surface water.

(v) To the maximum extent practicable, contain and securely protect from wind.

(i) Minimize Dust – describe dust control procedures and practices that will be used to suppress dust and limit its generation (i.e. applying water, limiting the amount of bare soil exposed at one time etc.)

(j) Designate Washout Areas – describe the controls that will be used to minimize the discharge of pollutants from equipment and vehicle washing, wheel wash water, washout areas for concrete mixers, paint, stucco, etc. The recommended location(s) of washout areas should be identified, or at a minimum the locations where these washout areas should not be sited should be called out.

(k) Establish Proper Equipment/Vehicle Fueling and Maintenance Practices – Describe equipment/vehicle fueling and maintenance practices that will be implemented to prevent pollutants from mixing with stormwater (e.g. secondary containment, drip pans, spill kits, etc.). Provide recommended location(s) of fueling/maintenance areas, or, at minimum, locations where fueling/maintenance should be avoided.

3. **Control Practice Installation, Inspection, and Maintenance Requirements**

(a) Installation Requirements - Complete the installation of temporary erosion, runoff, sediment, and pollution prevention control measures by the time each phase of earth-disturbance has begun. All stormwater controls must be installed in accordance with good engineering practices, including applicable design specifications. Design specifications may be found in manufacturer specifications and/or the *Rhode Island Soil Erosion and Sediment Control (RISESC) Handbook* (as amended). Any departures from such specifications must be provided and demonstrated to reflect good engineering practices.

(b) Inspection Requirements

(i) *Minimum Frequency* - Each of the following areas must be inspected by or under the supervision of the owner and operator at least once every seven (7) calendar days and within twenty-four (24) hours after any storm event which generates at least 0.25 inches of rainfall per twenty-four (24) hour period and/or after a significant amount of runoff:

a. All areas that have been cleared, graded, or excavated and that have not yet completed stabilization;

b. All stormwater erosion, runoff, and sediment control measures (including pollution prevention practices) installed at the site to comply with this permit;

c. Construction material, unstabilized soil stockpiles, waste, borrow, or equipment storage, and

maintenance areas that are covered by this permit and are exposed to precipitation;

d. All areas where stormwater typically flows within the site, including temporary drainage ways designed to divert, convey, and/or treat stormwater;

e. All points of discharge from the site;

f. All locations where temporary or permanent soil stabilization measures have been implemented;

g. All locations where vehicles enter or exit the site.

(ii) *Qualified Personnel* – The site owner and operator are responsible for designating personnel to conduct inspections and for ensuring that the personnel who are responsible for conducting the inspections are "qualified" to do so. A "qualified person" is a person knowledgeable in the principles and practices of erosion, runoff, sediment, and pollution prevention controls, who possesses the skills to assess conditions at the construction site that could impact stormwater quality, and the skills to assess the effectiveness of any stormwater controls selected and installed to meet the requirements of this permit.

(iii) *Recordkeeping Requirements* - All records of inspections, including records of maintenance and corrective actions must be maintained with the SESC Plan. Inspection records must include the date and time of the inspection, and the inspector's name, signature, and contact information.

(iv) *Reductions in Inspection Frequency* - If earth disturbing activities are suspended due to frozen conditions, inspections may be reduced to a frequency of once per month. The owner and operator must document the beginning and ending dates of these periods in the SESC Plan.

(v) Failure to make and provide documentation of inspections under this part constitutes a violation of this permit and enforcement actions under 46-12 of R.I. General Laws may result.

(c) Maintenance Requirements – Site owners and operators must ensure that all erosion, runoff, sediment, and pollution prevention controls remain in effective operating condition and are protected from activities that would reduce their effectiveness. Site owners and operators must ensure that all erosion, runoff, sediment, and pollution prevention controls are inspected at the frequency established in Part III.J.3.b of this permit. If the designated site inspector finds a problem (i.e. erosion, runoff, sediment or pollution prevention controls require replacement, repair, or maintenance), the owner and operator must ensure that the necessary repairs or modifications are made in accordance with the following:

(i) Initiate work to fix the problem immediately after discovering the problem, and complete such work by the close of the next work day, if the problem does not require significant repair or replacement, or if the problem can be corrected through routine maintenance.

(ii) When installation of a new control or a significant repair is needed, site owners and operators must ensure that the new or modified control practice is installed and made operational by no later than seven (7) calendar days from the time of discovery where feasible. If it is infeasible to complete the installation or repair within seven (7) calendar days, the reasons why it is infeasible must be documented in the SESC Plan along with the schedule for installing the stormwater control(s) and making it operational as soon as practicable after the 7-day timeframe. Where these actions result in changes to any of the stormwater control measures outlined in the SESC Plan, site owners and operators must modify the SESC Plan accordingly within seven (7) calendar days of completing this work in accordance with Part III.F.

(iii) If corrective actions are required, the site owner and operator must ensure that all corrective

actions are documented on the inspection report in which the problem was first discovered. These corrective actions must be documented, signed, and dated by the site operator once all necessary repairs have been completed.

4. **Site Plan Requirements –** Site Plans must depict all of the control measures required to meet the SESC Plan requirements of this permit. Depending on the complexity, the SESC Plan may reference the complete construction plan set prepared as part of the overall Stormwater Management Plan, and/or may have a specific SESC Plan Set developed. The SESC Plan should indicate the plan type (General, Drainage & Utility, SESC Plan, etc.) and sheet numbers where the following required information can be found:

   (a) Title & Date of Plan Set(s).

   (b) Total Project Area, including all grading and/or excavation, and a defined Limit of Disturbance.

   (c) Pre- and post-development drainage patterns.

   (d) The location and name of the receiving waters and/or separate storm sewer system and the ultimate receiving waters that may be impacted during construction.

   (e) Location of environmentally sensitive features and areas to be preserved and/or protected.

   (f) Locations where stormwater discharges to a surface water or wetland.

   (g) Location of all existing and proposed impervious surfaces/structures.

   (h) Locations of potential sources of pollution that may reasonably be expected to affect the quality of stormwater discharges from the site (i.e. exposed, unstabilized soil stockpiles and construction material and waste collection areas).

   (i) Locations and timing of stabilization practices including phased clearing and grubbing based on scheduled activities.

   (j) The location of all erosion, runoff, sediment, and pollution prevention control measures, including the location of temporary sediment basins, diversions, or other water quality, peak discharge, and volume control structures.

   (k) Areas within the project limits which are unsuitable for material storage areas, equipment storage areas, designated concrete washout collection areas, dumpsters, stockpiles, fueling locations, etc. (i.e. locations where these activities shall not occur, and recommendations of where they may occur.)

   (l) The location of spill prevention and response equipment.

   (m) The location of all proposed post-construction best management practices including locations of infiltrating practices and prohibited traffic areas.

IV. NOTICE OF INTENT REQUIREMENTS

A. Contents of the Notice of Intent:

1. Site information, including the street address, plat and lot numbers, location description, latitude, longitude and utility pole number.

2. Total site area and site area to be disturbed.

3. Name and class of water body class receiving run off from project or site.

4. Project name.

5. Indication of pre-application meeting and meeting date.

6. Owner/applicant information, including name, organization/company name, contact person, address, email and telephone number.

7. A signed certification by the Owner/Applicant that under penalty of law they've requested and authorized the investigation, compilation, and submission of all the information, in whatever form, contained in the Application; have personally examined and are familiar with the information submitted herein; and based on their inquiry of those individuals immediately responsible for obtaining the information, they believe the information is true, accurate and complete. The Owner/Applicant is aware that it's the owner's responsibility to implement or hire a qualified contractor responsible to implement any required Soil Erosion and Sediment Control Plan, to effectively control stormwater discharges leaving the site during the construction period. The Owner/Applicant authorizes RIDEM personnel access to the property for purposes of observing conditions pertinent to the application and assessing compliance with any permit or determination resulting from the application.

8. Professional information, including name, license type and number, company name, email, phone number and title. The Professional must be a Registered Professional Engineer, if the Stormwater Analysis and Drainage Report requires the practice of engineering; or a Registered Professional Engineer, a Certified Professional in Erosion and Sediment Control (CPESC), a Certified Professional in Storm Water Quality (CPSWQ), or a Registered Landscape Architect, if the submission requires the determination of site location within a Natural Heritage Area, or if the project requires submission of a Soil Erosion and Sediment Control Plan.

9. A signed certification by a Professional that under penalty of law the project described in the application and associated materials is in compliance with the RI Stormwater Design and Installation Standards Manual (as amended) and the Rhode Island Soil Erosion and Sediment Control Handbook (as amended) [if required] and that they believe all information presented in the application and the accompanying materials is true, accurate and complete. All engineering designs, plans and specifications [if required] included in the application were done by the certifying Professional or by someone working directly for them. The Natural Heritage Area Information [if required] and the site specific Soil Erosion and Sediment Control Plan [if required] were prepared under their direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on their inquiry of the person or persons who manage the system, or those persons directly responsible for gathering or developing the information, the information submitted is, to the best of their knowledge and belief, true, accurate, and complete at the time the application is made. The certifying Professional is aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

10. Permit History including all other RI Coastal Resources Management Council (CRMC), US Army Corps of Engineers and RIDEM application or file numbers and program names associated with the site.

11. Indicate if there are Freshwater Wetlands on the subject or adjacent property and the project proposes new or increased impervious cover for property other than a single family home; or disturbance of more than 10,000 square feet of existing impervious cover; or to fill in any amount of floodplain or alter storm flowage to a river, stream or wetland on any lot.

12. Indicate if the project requires an application to RI CRMC and proposes a residential development of six (6) units or more; or a project that results in the creation of 10,000 square feet or more of impervious area.

13. Indicate if the project proposes an infiltration system listed in the Rhode Island Stormwater Design and Installation Standards Manual (RISDISM) that receives stormwater from a residential impervious area that is more than 10,000 square feet; or a non-residential roof area greater than 10,000 square feet; or a non-residential road or parking area of any size.

14. Indicate if the treatment system discharges below the ground; or above the ground and infiltrates, but must be reviewed for compliance with the RISDISM to be protective of groundwater.

15. Indicate if the project proposes discharge of stormwater to waters of the State [including a Separate Storm Sewer System (MS4)], and disturbs less than one (1) acre, but the activity is part of a larger common plan resulting in more than 1 acre of disturbance; or disturbs more than 1 acre of property. Provide the name of the larger common plan.

16. Indicate if the site within or directly discharges to a Natural Heritage Area (NHA.)

17. For construction activities that disturb an area greater than or equal to five (5) acres and are not required to obtain a RIDEM Freshwater Wetlands Permit, RIDEM Water Quality Certification, RIDEM UIC/Groundwater Discharge Permit, CRMC Assent or QLP, the NOI must include a completed Stormwater Management Checklist as provided in Appendix A of the *Rhode Island Stormwater Design and Installation Standards Manual* (as amended) and a copy of the Stormwater Management Plan.

18. After review of the NOI, additional information may be required by this office to determine whether or not to authorize the discharge under this permit.

B. Where to Submit. A completed and signed NOI must be submitted to:

R.I. Department of Environmental Management
Permit Application Center
RIPDEM 235 Promenade Street
Providence, RI 02908

C. Additional Notification. Construction sites discharging stormwater must submit a copy of the NOI to the applicable Town or City Department in which the construction activity and the point of discharge is located.

D. Deficient. If the NOI does not meet one or more of the minimum requirements of this permit, then the applicant will be notified as such by a deficiency letter at any point during the review period. It is the responsibility of the applicant to make all required changes in the plan and resubmit the application. The review period will recommence upon the departmental receipt of the revised application.

V. GENERAL REQUIREMENTS

A. Duty to Comply. The permittee must comply with all conditions of this permit and any other applicable State, local and/or federal regulations. Any permit noncompliance constitutes a violation of Chapter 46-12 of the Rhode Island General Laws and the CWA and is grounds for enforcement action which may include, permit termination, revocation and reissuance, modification, or for the denial of a permit renewal application and the imposition of penalties.

1. The permittee shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or

prohibitions, even if the permit has not yet been modified to incorporate this requirement.

2. Section 309 of the CWA provides significant penalties for any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the CWA or any permit condition or limitation implementing any such sections in a permit issued under Section 402 of the CWA. Any person who violates any condition of this permit is subject to a civil penalty of up to $25,000 per day of such violation, as well as any other appropriate sanctions provided by Section 309 of the CWA. Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including reports of compliance or noncompliance shall, upon conviction, be punished by a fine of up to $10,000 or by imprisonment of not more than two (2) years, or by both.

3. Chapter 46-12 of the R.I. General Laws provides that any person who violates a permit condition is subject to a civil penalty of not more than $25,000 per day of such violation. Any person who willfully or negligently violates a permit condition is subject to a criminal penalty of not more than $25,000 per day of such violation and imprisonment for not more than five (5) years, or both. Any person who knowingly makes any false statement in connection with the permit is subject to a criminal penalty of not more than $5,000 for each instance of violation or by imprisonment for not more than thirty (30) days, or both.

B. Continuation of the Expired General Permit. Provided the permittee has reapplied in accordance with paragraph C. below, an expired general permit continues in force and effect until a new general permit is issued. Only those construction sites previously authorized to discharge under the expired permit are covered by the continued permit.

C. Duty to Reapply. If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain coverage under a new permit. The permittee shall submit a complete Notice of Intent at least thirty (30) days before the expiration date of the existing permit, unless permission for a later date has been granted by the Director.

D. Need to Halt or Reduce Activity Not a Defense. It shall not be a defense for the permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

E. Duty to Mitigate. The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit, which has a reasonable likelihood of adversely affecting human health or the environment.

F. Duty to Provide Information. The permittee shall furnish to the Department, within a reasonable time, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall furnish to the Director any documents that are required to be kept as part of this permit.

G. Signatory Requirements. All Notices of Intent, Stormwater Management Plans, Soil Erosion and Sediment Control Plans, inspection reports, certifications, or other information submitted to the Director, or that this permit requires be maintained by the permittee shall be signed and certified in accordance with Rule 12 of the RIPDES regulations. R.I. General Laws, Chapter 46-12 provides that any person who knowingly makes any false statements, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than $5,000 per violation, or by imprisonment for not more than thirty (30) days per violation, or by both.

H. Oil and Hazardous Substance Liability. Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the permittee is or may be subject under Section 311 of the CWA.

I. Release in Excess of Reportable Quantities. If a release in excess of a reportable quantity occurs, this office must be notified immediately. This permit does not relieve the permittee of the reporting requirements of 40 CFR 117 and 40 CFR 302. The discharge of hazardous substances in the stormwater discharge(s) from a facility shall be minimized in accordance with the applicable stormwater management plan for the facility, and in no case, during any twenty four (24) hour period, shall the discharge(s) contain a hazardous substance equal to or in excess of reportable quantities.

J. Property Rights. The issuance of this permit does not convey any property rights of any sort, nor any exclusive privileges, nor does it authorize any injury to private property nor any invasion of personal rights, nor any infringement of Federal, State, or local laws or regulations.

K. Severability. The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances and the remainder of this permit shall not be affected thereby.

L. Transfers. This permit is not transferable to any person except after notice to the Director. The Director may require the owner and operator to apply for and obtain an individual RIPDES permit as stated in Part V.T. of this permit.

M. State Laws. Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State law.

N. Proper Operations and Maintenance. The permit shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the requirements of this permit.

O. Record Keeping

1. The permittee shall retain records of all inspections and reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least five (5) years from the date of the report or application. The records must be kept at the construction site at all times. If an on-site location is deemed impractical, notice of the location of the required records must be posted near the main entrance to the construction site. Once the construction project is complete and the permit has been terminated, records must be kept at either the completed project location or the records must be maintained by the owner of record at the time that the construction project was active. This period may be extended by request of the Director at any time.

P. Bypass of Stormwater Control

1. *Anticipated Bypass.* If the permittee knows in advance of the need for a bypass, he or she shall notify this Department in writing at least ten (10) days prior to the date of the bypass. Such notice shall include the anticipated quantity and the anticipated effect of the bypass.

2. *Unanticipated Bypass.* The permittee shall submit notice of an unanticipated bypass. Any information regarding the unanticipated bypass shall be provided orally within twenty four (24) hours from the time the permittee became aware of the circumstances. A written submission shall also be provided within five (5) days of the time the permittee became aware of the bypass. The written submission shall contain a description of the bypass and its cause; the period of the bypass; including exact dates and times, and if the bypass has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate and prevent reoccurrence of the bypass.

3. *Prohibition of Bypass.*

(a) Bypass is prohibited and enforcement action against the permittee may be taken for the bypass unless:

(i) The bypass was unavoidable to prevent loss of life, personal injury or severe property damage;
(ii) The permittee submitted notices as required in paragraphs P.1. and P.2.

(b) The Director may approve an unanticipated bypass after considering its adverse effects, if the Director determines that it will meet the two conditions in paragraph P.3.a. above.

Q. Upset Conditions

1. An upset constitutes an affirmative defense to an action brought for non-compliance with technology based permit limitations if the requirements of paragraph 2 below are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

2. A permittee who wishes to establish an affirmative defense of an upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence, that:

(a) An upset occurred and the permittee can identify the specific causes(s) of the upset;
(b) The permittee facility was at the time being properly operated;
(c) The permittee submitted notice of the upset as required in Rule 14.08 of the RIPDES Regulations; and
(d) The permittee complied with any remedial measures required under Rule 14.05 of the RIPDES Regulations.

3. In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

R. Inspection and Entry. The permittee shall allow the Director, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the permittee's premises where a regulated activity is conducted, or where records must be kept under the conditions of this permit;
2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;
3. Inspect at reasonable times any equipment, practices, or operations regulated or required under this permit; and
4. Sample or monitor any substances or parameters at any location, at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the CWA or R.I. law.

S. Permit Actions. This permit may be modified, revoked and reissued, or terminated for cause, including but not limited to: violation of any terms or conditions of this permit; obtaining this permit by misrepresentation or failure to disclose all relevant facts; or a change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

T. Requiring an Individual Permit or an Alternative General Permit

1. The Director of the Department of Environmental Management (DEM) may require any owner or operator authorized to discharge stormwater under this permit to apply for and obtain either an individual or an alternative RIPDES general permit. Any interested person may petition the Director to take action

under this paragraph. The Director may determine at his or her own discretion that an individual or an alternative general permit is required (see RIPDES Rule 32 for reasons why an alternative permit may be required).

2. Any owner or operator authorized to discharge stormwater by this permit may request to be excluded from coverage of this permit by applying for coverage under an individual permit or an alternative general permit. The request shall be granted by the issuance of an individual permit only if the reasons cited by the owner or operator are adequate to support the request. The Director shall notify the permittee within a timely fashion as to whether or not the request has been granted.

3. If a facility requests or is required to obtain coverage under an individual or an alternative general permit, then authorization to discharge stormwater under this permit shall automatically be terminated on the date of issuance of the individual or the alternative general permit. Until such time as an alternative permit is issued, the existing general permit remains fully in force.

U. Reopener Clause

1. If there is evidence indicating potential or realized impacts on water quality due to any stormwater discharge associated with construction covered by this permit, the owner or operator of such discharge may be required to obtain an individual permit or alternative general permit in accordance with Part V.T. of this permit or the permit may be modified to include different limitations and/or requirements.

2. Permit modification or revocation will be conducted in accordance with 40 CFR 122.62, 122.63, 122.64 and 124.5.

V. Availability of Reports. Except for data determined to be confidential under Part W.1. below, all reports prepared in accordance with the terms of this permit shall be available for public inspection at the DEM at 235 Promenade Street, Providence, Rhode Island. As required by the CWA, effluent data shall not be considered confidential. Knowingly making any false statement on any such report may result in the imposition of criminal penalties as provided for in Section 309 of the CWA and under Chapter 46-12-14 of the Rhode Island General Laws.

W. Confidentiality of Information

1. Any information submitted to DEM pursuant to these regulations may be claimed as confidential by the submitter, consistent with Rhode Island General Law 38-2-2. Any such claim must be asserted at the time of the submission in the manner prescribed on the application form or instructions or, in the case of other submissions, by stamping the words "confidential business information" on each page containing such information. If no claim is made at the time of submission, DEM may make the information available to the public without further notice.

2. Claims of confidentiality for the following information will be denied:

   (a) The name and address of any permit application or permittee;
   (b) Permit applications, permits and any attachments thereto; and
   (c) RIPDES effluent data.

X. Right to Appeal. Within thirty (30) days of receipt of notice of final authorization, the permittee or any interested person may submit a request to the Director for an adjudicatory hearing to reconsider or contest that decision. The request for a hearing must conform to the requirements of Rule 49 of the RIPDES Regulations.

RE: **Water Quality Certificate Extension #1: National Grid LNG Facility**
Plat 56, Lots 5, 316 & 317; and Plat 101, Lot 1
642 Allens Avenue/121 Terminal Road, Providence
WQC File No. 16-171; RIPDES RIR101477

Dear Mr. Howard:

The RIDEM-Office of Water Resources has reviewed your request for an Extension of the permit expiration date of November 21, 2021 for the above-referenced project. The extension request did not include any proposed changes from what was previously approved in the originally issued WQC (attached).

The Water Quality Certification Program hereby grants an Extension of the WQC expiration date to November 21, 2022, as requested.

Please note that, except for Condition #7 (permit expiration date), all Conditions set forth in the original WQC remain in effect.

Sincerely,

Neal B. Personeus
Sen. Env. Scientist/Project Mgr.
Federal 401/State WQC Program

RE: **Water Quality Certificate - National Grid LNG Facility**
Plat 56, Lots 5, 316 & 317; and Plat 101, Lot 1; 642 Allens Avenue, Providence
WQC File No. 16-171; RIPDES RIR101477

Dear Mr. Howard:

The RIDEM-Office of Water Resources has reviewed the above referenced project for compliance with the State Water Quality Regulations (WQR), the Rhode Island Pollutant Discharge Elimination System Construction General Permit (RIPDES CGP) Regulations, and the Rhode Island Stormwater Design and Installation Standards Manual (RISDISM). The project involves the construction of a natural gas liquefaction facility on a portion of the subject property adjacent to an existing liquefied natural gas (LNG) tank. The new plant will tie into the existing high-pressure gas line that enters the site from the east (Providence River) and will be used to fill the existing LNG tank during low-demand summer months for use during high demand months. A new outfall will be constructed for the discharge of treated stormwater to the Providence River.

We have reviewed the subject application and site plans for the project entitled "National Grid, Proposed Liquefaction Project, 642 Allens Avenue / 121 Terminal Road, Providence, Rhode Island", sheets 1, 2, 2A, 2B, 2C, 2D, and 3 through 14 (aka sheets 1 through 18 of 18), dated October 2016, Revision 1 March 27, 2017, and Revision 2 June 28, 2018, date stamped by the Department on July 20, 2018, prepared by Sara Haupt, P.E., of GZA GeoEnvironmental, Inc. of Providence, Rhode Island. The State Water associated with this project is the Providence River, Class SB1{a}.

On January 31, 2018, a Public Hearing was held at the Veterans Memorial Auditorium in Providence to hear comments from parties interested in the above-referenced proposed natural gas liquefaction plant. The Public Hearing was offered by the Department in response to requests made in accordance with Rule 15D(3) of the Water Quality Regulations (WQR). In accordance with these requirements, a Public Notice for this Hearing was provided to all direct abutters of the subject property, those interested parties requesting the Hearing, as well as the Providence Journal and postings in multiple public spaces within the subject site vicinity. The Public Comment period was also extended through February 15, 2018 for those who may not have been able to attend the Public Hearing or otherwise provide comments

30% post-consumer fiber

during the public comment period.

The purpose of this Hearing was to afford interested parties an opportunity to submit data, views, arguments, orally or in writing, on the proposed project. The Hearing was recorded by a stenographer and the transcript has been submitted to the Department and added to the public file.

The Department reviewed the Public Comments related to the proposed Water Quality Certification Application filed in accordance with the RI Water Quality Regulations, the RIPDES Regulations and the Rhode Island Stormwater Design and Installation Standards Manual (RISDISM). The Public Hearing Transcript, a Response to Comments and all associated exhibits including the complete Plans and Engineering documents can be viewed on RI DEM's website at http://www.dem.ri.gov/programs/water/permits/water-quality-certification.php.

After reviewing all written and oral comments received during the comment period and at this Public Hearing, the RI DEM has responded to all significant comments related to the water quality regulations or water quality addressing all applicable and relevant comments. The Department has required the application materials to be amended as appropriate, has deemed the application complete, and has made a decision to issue a final permit.

It has been determined that this project meets the requirements of the Water Quality and RIPDES Regulations and has been reviewed consistent with the 2010 Rhode Island Stormwater Design and Installations Standards Manual (RISDISM) provided that the applicant complies with the above-referenced plans and the following conditions:

1) You **must** notify the RIDEM contact person identified below of the anticipated date of construction and your contractor's contact information, prior to any site disturbance.

2) Prior to construction, proper erosion and sedimentation controls/procedures, as identified in the above-referenced plans are installed and maintained in functional condition for the duration of the construction project.

3) Prior to construction, you **shall** erect or post a sign resistant to the weather and at least twelve (12) inches wide and (eighteen) inches long, which boldly identifies the initials "DEM" and the application number(s) assigned to this permit. The sign must be maintained at the site in a conspicuous location until such time that the project is complete.

4) A copy of this permit, any inspection records, and a signed and updated Soil Erosion and Sediment Control (SESC) Plan **must** be kept at the site at all times during site preparation, construction, and final stabilization. Copies of this permit must be made available for review by any DEM or City representative upon request.

5) All material used for fill and construction **shall** be clean and free of matter that could cause

pollution of the waters of the State.

6) The stormwater collection and treatment system approved herein is for the discharge of stormwater only. Any other discharge is prohibited.

7) This Water Quality Certificate for the construction phase of this project shall expire on November 21, 2021. Project construction is to be completed by this date. You shall be required to submit a request for any modification(s) and/or extension(s). Any such request must be submitted sufficiently in advance of the expiration date noted above.

8) Within thirty (30) days after completion, a Notice of Completion of Construction and Installation (or Notice of Termination for the CGP) confirming that construction and installation has been completed in accordance with the approved plans **shall** be submitted to the DEM Office of Water Resources. Please be aware that if modifications are made to the SESC Plan, they must be made in accordance with Part III.F, which states "The owner and operator shall amend the SESC Plan within seven (7) days whenever there is a change in design, construction, operation, maintenance or other procedure which has a significant effect on the potential for the discharge of pollutants, or if the SESC Plan proves to be ineffective in achieving its objectives." In addition, the SESC Plan shall be amended to identify any new operator that will implement a component of the SESC Plan. The amended SESC Plan must be kept on file at the construction site and any SESC Plan modifications must be documented. Any amendments to control measures which involved the practice of engineering, must first be reviewed, signed, and stamped by a Professional Engineer registered in the State of Rhode Island. The DEM reserves the right to review any SESC Plan amendments in the same manner as described in paragraph III.E. Please be aware that if modifications are necessary during the construction of the post-construction stormwater system that would affect the system's ability to meet the Standards and Performance Criteria in the Stormwater Management, Design, and Installation Rules (250-RICR-150-10-8) they must be done in accordance with Request for modification of approval shall be in accordance with §§ 1.16 and 1.17 of the Water Quality Regulations (250-RICR-150-05-1).

Please be aware that the RIDEM's Rules and Regulations Governing the Establishment of Various Fees require that RIPDES CGP permit holders to pay an Annual Fee of $100.00. An invoice will be sent to the owner on record in May/June of each year if the construction was still active as of December 31st of the previous year. The owner will be responsible for the Annual Fee until the construction activity has been completed, the site has been properly stabilized, and a completed Notice of Termination (NOT) has been received by the RIPDES Program. A copy of the NOT can be found attached to the CGP on the web page http://www.dem.ri.gov/stormwaterconstruction.

Tolling is not applicable to the Federally Authorized "Stormwater Discharge Associated with Construction Activity" CGP 2013 permit. Your authorization to discharge **expires at midnight, on September 25, 2020**. If construction and final stabilization has not been completed by that date, you must maintain coverage by re-authorizing the project in accordance with the deadlines for requesting

authorization in the re-issued CGP. The Department will notify all permittees through the public notification process as the CGP is re-issued. The final CGP will contain deadlines and instructions for re-authorization.

In addition to any necessary enforcement actions stemming from the violation of any of the terms or conditions of this Water Quality Certificate, issuance of this Water Quality Certificate does not bar the Department, or any of its various Divisions, from instituting any investigation and/or enforcement actions that it may deem necessary for violations of any and all applicable statutes, regulations and/or permits, including but not limited to violations of the terms or conditions of any previous Water Quality Certificate(s) issued to you as an applicant or for this site.

This is the State's Water Quality Certification, which shall have the full force and effect of a permit issued by the Director. Violation of the terms and conditions of this Certification may result in violation of the State's Water Quality Regulations and appropriate enforcement action.

Sincerely,

Eric Beck, P.E., Chief
Groundwater and Freshwater Wetlands Protection
Office of Water Resources

Response to Public Comments 11-21-18

RHODE ISLAND
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
235 Promenade Street, Providence, RI 02908-5767 TDD 401-222-4462

SHORT-TERM RESPONSE ACTION APPROVAL LETTER October 27, 2017
File No. SR -28-1152
Formerly Case No. 98-004

Amy A. Willoughby
Lead Environmental Scientist
New England Site Investigation & Remediation Group
National Grid
40 Sylvan Road, E3.691
Waltham, MA 02451

RE: Providence Gas Co. – AA
A.k.a. Former New England Gas Company MGP property
642 Allens Avenue, Providence, Rhode Island
Plat Map 56 / Lot 5, Plat Map 101 / Lot 1

Dear Ms. Willoughby:

As you know, Rhode Island Department of Environmental Management (DEM), Office of Waste Management (OWM) is responsible for overseeing the remediation effort at 642 Allens Avenue – specifically, the removal and containment of contaminated soil and groundwater. This property became a regulated site in DEM's Site Remediation Program due to historic releases of hazardous materials to soil and groundwater related to its former usage as a manufactured gas plant.

On November 9, 2011, OWM amended the Rules and Regulations for the Investigation and Remediation of Hazardous Material Releases (the Remediation Regulations). The purpose of these regulations is to create an integrated program requiring reporting, investigation and remediation of contaminated sites in order to eliminate and/or control threats to human health and the environment in a timely and cost-effective manner. A Short-Term Response Action Approval Letter is a document used by the Department to approve limited phased remedial actions pursuant to Section 6.00 of the Remediation Regulations at contaminated sites that do not involve the use of complex engineered systems or techniques (i.e., groundwater pump and treat systems, soil vapor extraction systems, etc.).

In the matter of the above-referenced property, OWM is in receipt of the following final documentation submitted pursuant to the Remediation Regulations in response to the reported release at the Site:

1. Short Term Response Action Plan (STRAP), Proposed Liquefaction Project, 121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island, RIDEM Case No. 98-004 / Site Remediation File No. SR-28-1152, FERC Docket No. CP16-121-000, received by the Department on May 12, 2017, prepared by GZA Geoenvironmental, Inc. (GZA); and

2. Short Term Response Action Plan (STRAP) Addendum, Proposed Liquefaction Facility,

121 Terminal Road, RIDEM File No. SR-28-1152, RIDEM Case Number: 98-004, Providence, Rhode Island, received by the Department on October 11, 2017, and prepared by GZA.

Together these documents fulfill the requirements of Section 6.00 (Emergency or Short-term Response) of the Remediation Regulations.

The STRAP addresses remedial activities in the area of planned construction of a proposed Liquefaction Facility for the Liquefied Natural Gas (LNG) facility at the site. The STRAP describes erosion and sedimentation controls, establishment of a temporary laydown area, performance of initial subgrade remedial work, testing of and importing of clean fill materials, grading and off-Site disposal of excess regulated materials at an appropriately licensed facility. It also includes pre-clearing or pre-drilling of selected piles, which requires management of excess impacted soil and groundwater during earthwork activities, which will ultimately raise the majority of the STRAP area approximately 9 to 11 feet above existing grade. Finally, the STRAP describes installation of a variety of Department approved engineered caps, and restoration activities (fencing, gate installation and monitoring well re-installation), which are required under the Remediation Regulations.

The five (5) Department approved engineered caps include a Crushed Stone Soil Engineered Cap consisting of at least 18-inches of processed gravel, sand or other imported tested clean fill base, overlain with at least 6-inches of imported 2-inch crushed stone; a Concrete Engineered Cap consisting of at least 6-inches of processed gravel, sand or other imported tested clean fill base, overlain with at least 4-inches of concrete; an Asphalt Engineered Cap (New Paving) consisting of at least 6-inches of processed gravel, sand or other imported tested clean fill base, overlain with at least 4-inches of asphalt; a Rip-Rap Engineered Cap consisting of a non-woven geotextile, overlain with at least 12-inches of imported Rip-Rap; and a Sand Filter Engineered Cap consisting of a Linear Low Density Polyethylene (LLDPE) liner system, overlain by a minimum of 12-inches of 3/8 inch peastone, overlain by a non-woven geotextile, overlain with at least 18-inches of clean imported C-33 sand. All areas disturbed by the proposed STRAP activities shall be restored with a Department approved engineered cap consistent with those listed above. Any remaining areas within the Project Work Site, which do not currently have an existing equivalent cap, and are not subject to proposed capping during STRAP activities, shall be subject to remediation under the future Site Investigation Report (SIR) Addendum for the remainder of the Site.

Management of stormwater runoff generated from the new impervious areas shall be treated via a forebay and lined sand filter system designed and installed in accordance with the Rhode Island Stormwater Design and Installation Standards Manual (RISDISM). There shall be no infiltration of stormwater from the system into Site soils under the STRAP. A final stormwater outfall shall discharge to the Providence River. All collected groundwater shall be containerized into fractionation tanks, stored in the soil and groundwater management area, and shall be disposed/recycled off-Site at a licensed and permitted disposal/recycling facility.

An estimated 2,988 cubic yards of excess regulated soil materials will be removed to facilitate installation of piles and utilities. Excess regulated soils shall be temporarily stored in the soil and groundwater management area on at least two (2) layers of polyethylene sheeting and covered with

a layer of polyethylene sheeting to control the generation of wind-blown dusts and potential migration of soils with stormwater runoff. All stockpile areas shall be equipped with appropriate controls to limit the loss of the cover and protect against storm water erosion. Any soils which exhibit excessive visual or olfactory evidence of impact, evidence of free non-aqueous phase liquid (NAPL), or elevated total volatile organic compound (TVOC) headspace screening via a photoionization detector (PID), shall be segregated and stockpiled separately for off-Site disposal/recycling at a permitted/licensed facility and shall be kept in designated, separate piles from other Site soils that may be reused under the engineered cap. Excess regulated soils which do not exhibit excessive visual or olfactory evidence of impact, evidence of free NAPL, or elevated TVOC headspace screening may be reused on Site only under an engineered cap in the STRAP area. All excess soil materials not reused under an engineered cap shall be disposed of off-Site at a licensed and permitted facility.

During all STRAP earthwork activities, best management practices (BMPs) shall be implemented for dust, odor & organic vapor control, including performance of an Air Monitoring Program (AMP). The AMP shall include three (3) unmanned continuous air monitoring stations located along the perimeter of the STRAP area positioned in the direction of the nearest potential receptors, as well as real-time monitoring utilizing portable instrumentation, including a PID MiniRAE to measure TVOCs, and a DustTRAK Dust Meter to sense airborne respirable particulate dust. If readings above the action levels for TVOCs or dust are encountered and exceeded at sustained levels for a period of 5 minutes at the perimeter locations, the likely source of exceedance shall immediately be evaluated, and if determined that the source is the actual work, Site personnel shall implement appropriate engineering controls and/or modify work practices to address exceedances, including stopping the work as necessary until exceedances are controlled. Results of the air monitoring shall be provided to the Department on a weekly basis in an air monitoring summary report suitable for web posting. In the event of any sustained perimeter exceedance, the weekly summary report shall include information regarding the date/time of exceedance, nature of exceedance, field measures/work practice modifications implemented in response to the exceedance, and how the causes were controlled and/or finally resolved.

At this time, the OWM offers its concurrence with the proposed remedial action for the property. The OWM approves the STRAP provided that all activities and procedures detailed in the STRAP are strictly adhered to. Furthermore, this letter continues to place primary responsibility for the construction, operation, maintenance, and monitoring of the approved STRAP and its associated implementation on National Grid. As the Responsible Party and Performing Party, National Grid is expected to implement the STRAP in an expeditious and professional manner that prevents non-compliance with this Short-Term Response Action Approval Letter and said STRAP, and is protective of human health and the environment.

The Performing Party shall notify all abutting property owners, tenants, easement holders, the municipality, and any community well suppliers associated with any well head protection areas which encircle the site, that the Short-Term Remedial Action is complete and make available to them the findings of the Short-Term Response Report submitted in accordance with Rule 6.06 II of the Remediation Regulations. Please submit a draft notification to the Department via E-mail for review and approval prior to distribution.

Within thirty (30) days of completion of all the above mentioned remedial work outlined in the STRAP, please submit a STRA Closure Report in accordance with Rule 6.09 inclusive of any disposal documentation and laboratory sampling analysis to the OWM for review and approval.

This Short-Term Response Action Approval Letter does not remove your obligation to obtain any other necessary permits from other local, State, or Federal agencies. The OWM shall require at least forty-eight (48) hours notice in advance of any remedial work.

If you have any questions regarding this letter or would like the opportunity to meet with Department personnel, please contact me by telephone at (401) 222-2797, ext. 7109, or by E-mail at joseph.martella@dem.ri.gov.

PRE-CAST STORM STRUCTURE NOTES:

1. ALL STORM SEWER STRUCTURES SHALL BE PRE-CAST.
2. PRE-CAST SHOP DRAWINGS ARE TO BE APPROVED BY THE ENGINEER.
3. DO NOT SCALE THESE DRAWINGS FOR DIMENSIONS OR CLEARANCES. ANY QUESTIONS REGARDING DIMENSIONS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO CONSTRUCTION.
4. ALL CONCRETE SHALL BE 4000 PSI.
5. EXPANSION JOINTS SHALL BE EITHER HOT OR COLD POURED JOINT SEALING COMPOUND, OR PRE-MOLDED EXPANSION JOINT FILLER.
6. STEEL INLET FRAME SPACERS SHALL BE PLACED AT EQUAL SPACING NOT TO EXCEED 4'-0".
7. PLASTIC COATED STEPS MAY BE M.A. INDUSTRIES, INC. NO PS1-PF, OR APPROVED STEPS SHALL BE SPACED AT 1'-4" OC VERTICALLY. THE DISTANCE FROM THE LAST STEP TO THE TOP OF THE CONCRETE INVERT SHOULD BE A MAXIMUM OF 24".
8. BACKFILL AROUND STRUCTURES SHALL BE COMPACTED PER GEOTECHNICAL REPORT REQUIREMENTS.
9. PLACE PIPE END FLUSH WITH STRUCTURE FACE AND FINISH WITH MORTAR.
10. SHALL BE IN ACCORDANCE WITH SECTION 702 OF THE R.I STANDARD SPECIFICATIONS.
11. INLET FLOORS SHALL BE SHAPED WITH NON-REINFORCED CONCRETE. INVERTS TO PROVIDE SMOOTH FLOW.
12. BEVEL ALL EXPOSED EDGES WITH 3/4" CHAMFER STRIP.
13. PIPE CONNECTIONS TO PRE-CAST STRUCTURES SHALL HAVE A MINIMUM OF 6" OF CONCRETE AROUND THE ENTIRE PIPE WITHIN 2'-0" OF THE STRUCTURE.
14. THE FOLLOWING SHALL BE STENCILED USING 2" HIGH LETTERS AND BLACK PAINT ON THE TOP OF THE INLET (EITHER SIDE): NO DUMPING DRAINS TO STREAM.
15. PRE-CAST STORM SEWER STRUCTURES SHALL MEET THE REQUIREMENTS OF ASTM C478 AND ASTM 890.
16. POINTS OF ATTACHMENT PROVIDED FOR LIFTING PRECAST TOPS SHALL NOT BE LOCATED ON THE TOP SIDE OF INLET TOP.
17. HDPE: PIPE - 4" HDPE MEETING AASHTO M252, TYPE S; GRATE - 4" HDPE - MEETS ASTM D-3350;MAXIMUM OPENING SIZE 1/4".
18. ANY NECESSARY ADJUSTMENTS DURING CONSTRUCTION WILL BE DONE BY SAW-CUTTING AND/OR CORING ONLY. NO JACKHAMMERS, HAMMERS AND CHISELS OR PNUEMATIC TOOLS WILL BE ALLOWED.
19. THE CENTERLINE OF THE OPENING MUST BE WITHIN 2'-0" FROM THE STEPS.
20. TOP SLAB, RISER AND BASE SECTIONS HAVE BEEN REINFORCED TO MEET OR EXCEED H-20 OR HS-20 LOADING WITH EARTH PRESSURES INCLUDED. THIS IMPLIES THAT THE TOP SLAB, RISER AND BASE SECTIONS ARE DESIGNED FOR AXLE LOAD OF NO GREATER THAN 20 TONS. ALL STRUCTURES SHALL BE DESIGNED FOR AASHTO HS-20 LOADING.
21. THERE IS TO BE 2" MINIMUM COVER ON ALL REBAR.
22. ALL REBARS ARE TO HAVE MINIMUM 2" CLEARANCE FROM OPENINGS.
23. LINK-SEAL SHALL BE INSTALLED PER LINK-SEAL STANDARD SPECIFICATIONS.

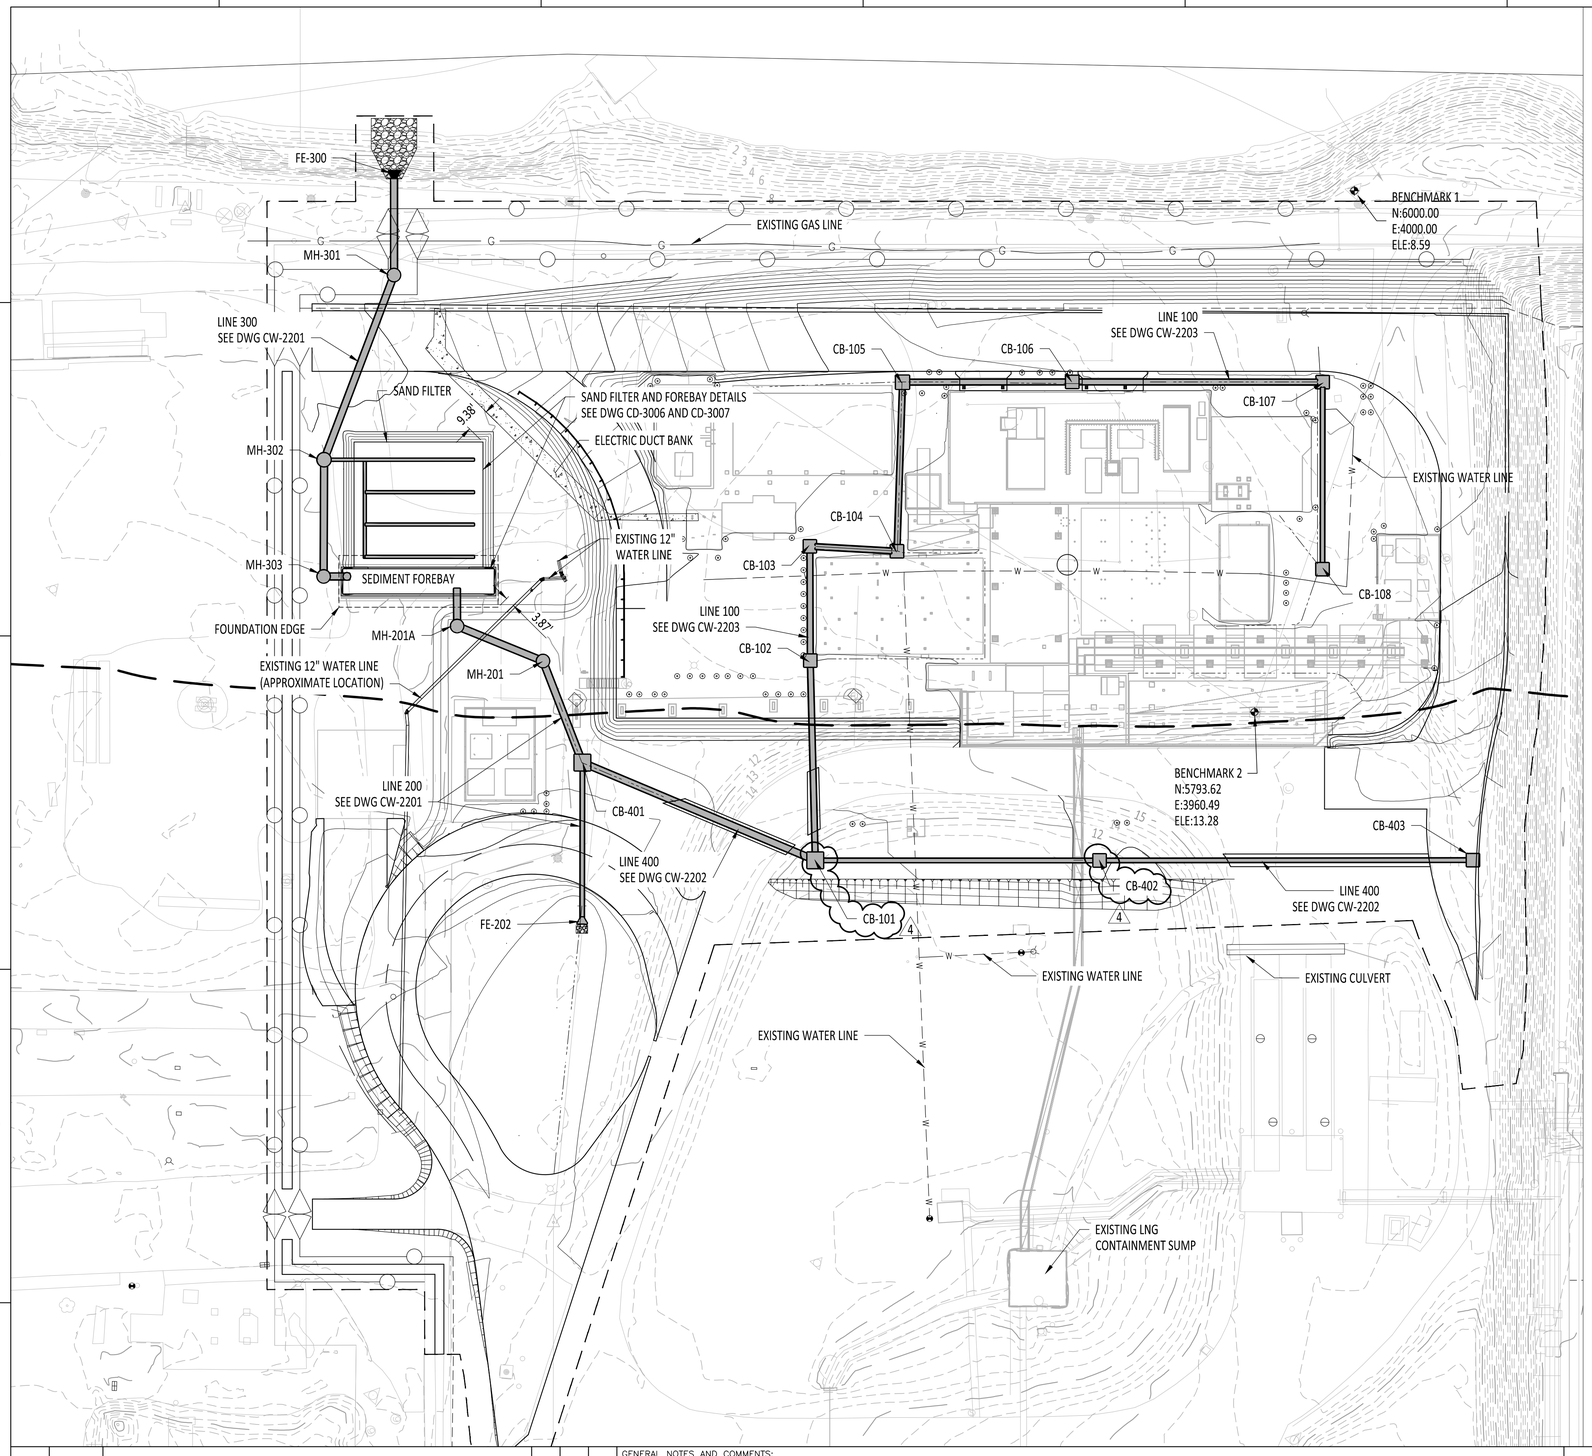
CONCRETE TRENCH PLAN AND PROFILE

DRAWING NO:	SHT:	REV.
102761-B-00-0000-CIV-CP-1001	1 OF 1	3

SEP 15, 2022 - 8:03pm DRAWING NAME: H:\1Projects\NGUS\20011628_FieldsPoint\DES\CIV\Civil Drawings\DWG\AREA J SUMP _DWG\102761-B-00-0000-CIV-CP-1001_CONCRETE TRENCH PLAN PROFILE.dwg



NOTES:

1. SEE DWG CN-0002 FOR GENERAL NOTES, ABBREVIATIONS AND LEGEND.
2. SEE DWG CN-0002 AND CT-2660 FOR SURVEY CONTROL.
3. SEE DRAWINGS CG-2103 FOR GRADING.
4. SEE DRAWINGS CW-2200 TO CW-2203 FOR STORM WATER PLAN AND PROFILES.
5. SEE DRAWING CD-3004 AND CD-3005 FOR STORM WATER DETAILS.
6. STRUCTURE LOCATIONS ARE INDICATED FROM CENTER OF STRUCTURE. GRATE ELEVATIONS ARE SHOWN AT THE CENTER OF INLET GRATE.
7. BLOCK ALL INLET GRATES TO PREVENT STORM WATER FROM ENTERING THE SYSTEM UNTIL CONNECTION TO THE FUTURE STORM DRAIN IS MADE.
8. VARIOUS ABOVE GROUND AND UNDER GROUND UTILITIES ARE NOT SHOWN. FOR DUCT BANKS AND DIRECT-BURIED CONDUIT SEE THE ELECTRICAL PLANS. FOR PIPING SEE THE MECHANICAL PLANS. FOR CLARITY PURPOSES THE ABOVE GROUND AND UNDERGROUND UTILITIES ARE NOT SHOWN IN THE PROFILES.
9. ALL STORM DRAINAGE STRUCTURES SHALL BE FABRICATED AND INSTALLED IN ACCORDANCE WITH SPECIFICATION 102761-B-CIV-SPC-0002 STORM DRAINAGE.
10. UNDERGROUND STORM SEWERS SHALL HAVE THEIR DESIGN COVER IN PLACE PRIOR TO SUBJECTING TO TRAFFIC LOADING.
11. REFER TO THE PROJECT STORMWATER MANAGEMENT PLAN (SWMP) AND THE SOIL EROSION AND SEDIMENT CONTROL (SESC) PLAN, FOR ALL APPLICABLE EROSION AND SEDIMENT CONTROL PRACTICES RELATED TO STORM DRAINAGE SYSTEM.
12. UNLESS OTHERWISE INDICATED, PENETRATIONS FOR PIPES ENTERING OR LEAVING RECTANGULAR STORM DRAIN STRUCTURES SHALL BE PLACED ON THE CENTERLINES OF THE RESPECTIVE WALLS OF EACH STRUCTURE.
13. CONTRACTOR SHALL PROVIDE 'AS-CONSTRUCTED" DATA ON THE INSTALLED STORM SEWER THAT INCLUDES THE FOLLOWING SURVEYED INFORMATION:
    - A. STRUCTURE TOP ELEVATION
    - B. STORMWATER INVERT ELEVATION STRUCTURE
    - C. UNDERGROUND BENDS, TEES, WYES, CONNECTIONS WITH NORTHING, EASTING,ELEVATION OF TOP OF PIPE.
    - D. STORM PIPE SIZE
    - E. STORM STRUCTURE SIZE
    - F. STORM INLET OPENING ORIENTATION (FOR AREA INLETS ONLY)
    - G. STORMWATER TREATAMENT SYSTEM (TOP, TOE, OVERFLOW ELEVATION, OUTLET STRUCTURE, NORMAL POOL FOR WET PONDS)
15. STORM SEWER "AS-CONSTRUCTED" DATA SHALL BE SUBMITTED TO THE LEAD CIVIL ENGINEER FOR REVIEW AND APPROVAL WITHIN TWO WEEKS OF INSTALLATION OF EACH STRUCTURE AND/OR PIPE.

ESS Laboratory Work Order Number: 19F0752

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:59 pm, Jun 28, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 19F0752

SAMPLE RECEIPT

The following samples were received on June 21, 2019 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on June 21, 2019 at 16:00.

Lab Number	Sample Name	Matrix	Analysis
19F0752-01	062119-1.5DG	Soil	6010C, 7471B, 8100M, 8260B Low, 8270D
19F0752-02	062119-1.5DG-A1	Soil	6010C
19F0752-03	062119-1.5DG-A2	Soil	6010C
19F0752-04	062119-1.5DG-A3	Soil	6010C

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

CF92443-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (136% @ 70-130%)

CF92443-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (29% @ 25%)

8270D Semi-Volatile Organic Compounds

C9F0401-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (96% @ 80-120%), 4,6-Dinitro-2-Methylphenol (102% @ 80-120%), Benzoic Acid (122% @ 80-120%), Pentachlorophenol (107% @ 80-120%)

C9F0401-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Benzoic Acid (22% @ 20%)

C9F0401-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Hexachlorocyclopentadiene (43% @ 20%), Isophorone (21% @ 20%), N-Nitrosodimethylamine (22% @ 20%)

Total Metals

CF92446-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Lead (24% @ 20%)

No other observations noted.

End of Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

Shipped/Delivered Via: Client

ESS Project ID: 19F0752
Date Received: 6/21/2019
Project Due Date: 6/28/2019
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.3 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. Were labs informed about short holds & rushes? Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 6/21/19 Time: 1600 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted: Date: Time: By:

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 2:46 pm, Jul 29, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

CERTIFICATE OF ANALYSIS

Sophia Narkiewicz
GZA GeoEnvironmental, Inc.
188 Valley Street
Providence, RI 02909

RE: 642 Allens Ave (03.0033554.04)
ESS Laboratory Work Order Number: 19G0613

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:15 pm, Jul 26, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

RE: NGRID Liquefication Project (03.0033554.04)
ESS Laboratory Work Order Number: 19K0808

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:42 pm, Dec 05, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 19K0808

SAMPLE RECEIPT

The following samples were received on November 25, 2019 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on November 25, 2019 at 19:31.

Lab Number	Sample Name	Matrix	Analysis
19K0808-01	Keating - 1.5in dense grade - pile B Sample 1	Soil	6010C
19K0808-02	Keating - 1.5in dense grade - pile B Sample 2	Soil	6010C
19K0808-03	Keating - 1.5in dense grade - pile B Sample 3	Soil	6010C

Semivolatile Organics Internal Standard Information

Semivolatile Organics Surrogate Information

Volatile Organics Internal Standard Information

Volatile Organics Surrogate Information

EPH and VPH Alkane Lists

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: NGRID Liquefication Project

ESS Laboratory Work Order: 19K0808

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: NGRID Liquefication Project
Client Sample ID: Keating - 1.5in dense grade - pile B Sample 1
Date Sampled: 11/25/19 14:10
Percent Solids: 96

ESS Laboratory Work Order: 19K0808
ESS Laboratory Sample ID: 19K0808-01
Sample Matrix: Soil
Units: mg/kg dry

Extraction Method: 3050B

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

Providence, RI 02909

RE: 642 Allens Ave (03.0033554.04)
ESS Laboratory Work Order Number: 20D0445

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:47 pm, Apr 24, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

SAMPLE RECEIPT

The following samples were received on April 16, 2020 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on April 16, 2020 at 1307.

Lab Number	Sample Name	Matrix	Analysis
20D0445-01	Pile C S-1 1.5in Dense Grade	Soil	6010C, 7471B, 8100M, 8260B Low, 8270D
20D0445-02	Pile C S-2 1.5in Dense Grade	Soil	6010C, 7471B, 8100M, 8260B Low, 8270D
20D0445-03	Pile C As-1 1.5in Dense Grade	Soil	6010C
20D0445-04	Pile C As-2 1.5in Dense Grade	Soil	6010C

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

D0D0339-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Bromomethane (82% @ 30%)

DD01726-BS1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (195% @ 70-130%)

DD01726-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (199% @ 70-130%)

8270D Semi-Volatile Organic Compounds

D0D0266-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (98% @ 80-120%), 4,6-Dinitro-2-Methylphenol (114% @ 80-120%), Benzoic Acid (97% @ 80-120%), Pentachlorophenol (101% @ 80-120%)

D0D0266-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Pyridine (25% @ 20%)

D0D0266-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Hexachlorocyclopentadiene (24% @ 20%)

D0D0351-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (94% @ 80-120%), 4,6-Dinitro-2-Methylphenol (107% @ 80-120%), Benzoic Acid (94% @ 80-120%), Pentachlorophenol (97% @ 80-120%)

D0D0351-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Hexachlorocyclopentadiene (28% @ 20%)

DD01519-BS1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (39% @ 40-140%)

DD01519-BSD1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (37% @ 40-140%)

No other observations noted.

End of Project Narrative.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: Client

ESS Project ID: 20D0445
Date Received: 4/16/2020
Project Due Date: 4/23/2020
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.3 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No (NA)
10. Were any analyses received outside of hold time? Yes (No)

11. Any Subcontracting needed? Yes (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 4/16/20 Time: 1307 By: MR

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes (No)
    a. Was there a need to contact the client? Yes (No)
    Who was contacted: Date: Time: By:

RE: FPLP (03.0033554.05 Task 6.2)
ESS Laboratory Work Order Number: 20F0959

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 2:31 pm, Jun 29, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

DF02651-BS1 **Blank Spike recovery is below lower control limit (B-).**
1,4-Dioxane (69% @ 70-130%), Acetone (66% @ 70-130%)

DF02651-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Bromoform (64% @ 70-130%)

DF02651-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
1,4-Dioxane (37% @ 20%), Acetone (34% @ 25%)

8270D Semi-Volatile Organic Compounds

D0F0492-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (128% @ 80-120%), 4,6-Dinitro-2-Methylphenol (122% @ 80-120%), Benzoic Acid (126% @ 80-120%), Pentachlorophenol (125% @ 80-120%)

D0F0492-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,4-Dinitrophenol (28% @ 20%), 4,6-Dinitro-2-Methylphenol (22% @ 20%), Benzoic Acid (26% @ 20%), Pentachlorophenol (25% @ 20%), Pyridine (35% @ 20%)

D0F0504-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (91% @ 80-120%), 4,6-Dinitro-2-Methylphenol (86% @ 80-120%), Benzoic Acid (95% @ 80-120%), Pentachlorophenol (104% @ 80-120%)

D0F0504-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Pyridine (29% @ 20%)

No other observations noted.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: Client

ESS Project ID: 20F0959
Date Received: 6/25/2020
Project Due Date: 6/26/2020
Days for Project: 1 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.3 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) No / NA
13. Are the samples properly preserved? (Yes) No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 6/25/20 Time: 1312 By: [illegible]

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
1	59015	Yes	N/A	Yes	8 oz jar	NP	
1	59016	Yes	N/A	Yes	8 oz jar	NP	
1	59017	Yes	N/A	Yes	VOA Vial	MeOH	
1	59018	Yes	N/A	Yes	VOA Vial	DI Water	
1	59019	Yes	N/A	Yes	VOA Vial	DI Water	
2	59013	Yes	N/A	Yes	4 oz. Jar	NP	
3	59014	Yes	N/A	Yes	4 oz. Jar	NP	

2nd Review
Were all containers scanned into storage/lab? Initials [illegible]
Are barcode labels on correct containers? Yes / No
Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA
Are all Hex Chrome stickers attached? Yes / No / NA
Are all QC stickers attached? Yes / No / NA
Are VOA stickers attached if bubbles noted? Yes / No / NA

RE: 642 Allens Ave (03.0033554)
ESS Laboratory Work Order Number: 20G0354

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:36 pm, Jul 16, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Project ID: 642 Allens Ave

ESS Laboratory Work Order: 20G0354

SAMPLE RECEIPT

The following samples were received on July 14, 2020 for the analyses specified on the enclosed Chain of Custody Record.

Revision 1 July 16, 2020: This report has been revised to include lowered reporting limit for Beryllium for 20G0354-01.

Lab Number	Sample Name	Matrix	Analysis
20G0354-01	PJ Keating 1.5in Dense Grade Pile E S-1	Soil	6010C, 6020A, 7010, 7471B, 8100M, 8260B Low, 8270D
20G0354-02	PJ Keating 1.5in Dense Grade Pile E AS-1	Soil	7010
20G0354-03	PJ Keating 1.5in Dense Grade Pile E AS-2	Soil	7010
20G0354-04	PJ Keating 1.5in Dense Grade Pile E AS-3	Soil	7010

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

DG01445-BS1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (146% @ 70-130%)

DG01445-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (44% @ 25%)

8270D Semi-Volatile Organic Compounds

D0G0192-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (109% @ 80-120%), 4,6-Dinitro-2-Methylphenol (106% @ 80-120%), Benzoic Acid (96% @ 80-120%)

D0G0192-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Hexachlorocyclopentadiene (21% @ 20%)

Total Metals

DG01404-BS5 **Blank Spike recovery is below lower control limit (B-).**
Thallium (105% @ 80-120%)

DG01404-BSD3 **Blank Spike recovery is above upper control limit (B+).**
Antimony (236% @ 40-160%)

DG01404-BSD3 **Blank Spike recovery is below lower control limit (B-).**
Chromium (43% @ 80-120%), Copper (47% @ 73-127%), Nickel (36% @ 65-132%), Selenium (24% @ 52-147%), Zinc (49% @ 80-120%)

DG01404-BSD3 **Relative percent difference for duplicate is outside of criteria (D+).**
Antimony (97% @ 30%), Copper (67% @ 30%), Nickel (92% @ 30%), Selenium (125% @ 30%), Silver (48% @ 30%), Zinc (71% @ 30%)

DG01404-BSD5 **Relative percent difference for duplicate is outside of criteria (D+).**
Thallium (46% @ 30%)

No other observations noted.

End of Project Narrative.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / (No)
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 7/14/20 Time: 16:37 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted? Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
1	63706	Yes	N/A	Yes	VOA Vial	MeOH	
1	63707	Yes	N/A	Yes	VOA Vial	DI Water	
1	63708	Yes	N/A	Yes	VOA Vial	DI Water	
1	63712	Yes	N/A	Yes	8 oz jar	NP	
2	63709	Yes	N/A	Yes	8 oz jar	NP	
3	63710	Yes	N/A	Yes	8 oz jar	NP	
4	63711	Yes	N/A	Yes	8 oz jar	NP	

2nd Review

Were all containers scanned into storage/lab? Initials

	Yes / No
Are barcode labels on correct containers?	Yes / No
Are all Flashpoint stickers attached/container ID # circled?	Yes / No / NA
Are all Hex Chrome stickers attached?	Yes / No / NA
Are all QC stickers attached?	Yes / No / NA
Are VOA stickers attached if bubbles noted?	Yes / No / NA

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 5:27 pm, Oct 01, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

DI02437-BS1 **Blank Spike recovery is above upper control limit (B+).**
2-Hexanone (131% @ 70-130%), Acetone (142% @ 70-130%), Tetrachloroethene (133% @ 70-130%)

DI02437-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Tetrachloroethene (138% @ 70-130%)

8100M Total Petroleum Hydrocarbons

D0I0407-CCV2 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Decane (C10) (24% @ 20%), Nonane (C9) (27% @ 20%)

8270D Semi-Volatile Organic Compounds

D0I0342-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (72% @ 80-120%), 4,6-Dinitro-2-Methylphenol (85% @ 80-120%), Benzoic Acid (93% @ 80-120%), Pentachlorophenol (108% @ 80-120%)

D0I0342-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
2,4-Dinitrophenol (28% @ 20%), N-Nitrosodimethylamine (25% @ 20%)

DI02427-BS1 **Blank Spike recovery is below lower control limit (B-).**
Aniline (34% @ 40-140%)

DI02427-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Aniline (36% @ 40-140%)

No other observations noted.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: Client

ESS Project ID: 2010659
Date Received: 9/23/2020
Project Due Date: 9/30/2020
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.6 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 9/23/20 Time: 15:42 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
1	87253	Yes	N/A	Yes	VOA Vial	MeOH	
1	87254	Yes	N/A	Yes	VOA Vial	DI Water	
1	87255	Yes	N/A	Yes	VOA Vial	DI Water	
1	87256	Yes	N/A	Yes	8 oz jar	NP	

2nd Review
Were all containers scanned into storage/lab? Initials: MA (Yes) / No
Are barcode labels on correct containers? Yes / No / NA
Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA
Are all Hex Chrome stickers attached? Yes / No / NA
Are all QC stickers attached? Yes / No / NA
Are VOA stickers attached if bubbles noted? Yes / No / NA

RE: FPLP (03.0033554.04 Task 6.2)
ESS Laboratory Work Order Number: 21D0181

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 6:07 pm, Apr 08, 2021

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: FPLP

ESS Laboratory Work Order: 21D0181

SAMPLE RECEIPT

The following samples were received on April 07, 2021 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on April 7, 2021 at 1335.

Lab Number	Sample Name	Matrix	Analysis
21D0181-01	1.5 Dense Grade	Soil	6010C, 7471B, 8100M, 8260B Low, 8270D
21D0181-02	1.5 Dense Grade	Soil	6010C

PROJECT NARRATIVE

8270D Semi-Volatile Organic Compounds

D1D0079-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (70% @ 80-120%), 4,6-Dinitro-2-Methylphenol (88% @ 80-120%), Benzoic Acid (84% @ 80-120%), Di-n-octylphthalate (114% @ 80-120%), Pentachlorophenol (96% @ 80-120%)

D1D0079-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Pyridine (28% @ 20%)

D1D0079-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
2,4-Dinitrophenol (30% @ 20%)

D1D0127-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (121% @ 80-120%), 4,6-Dinitro-2-Methylphenol (113% @ 80-120%), Benzoic Acid (115% @ 80-120%), Pentachlorophenol (112% @ 80-120%)

D1D0127-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,4-Dinitrophenol (21% @ 20%)

DD10608-BS1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (32% @ 40-140%), Aniline (36% @ 40-140%), Hexachlorocyclopentadiene (39% @ 40-140%)

No other observations noted.

End of Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 21D0181
Date Received: 4/7/2021
Project Due Date: 4/8/2021
Days for Project: 1 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 5.7 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 4/7/21 Time: 1335 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
1	151394	Yes	N/A	Yes	8 oz jar	NP	
1	151395	Yes	N/A	Yes	8 oz jar	NP	
1	151396	Yes	N/A	Yes	4 oz. Jar	NP	
1	151397	Yes	N/A	Yes	VOA Vial	MeOH	
1	151398	Yes	N/A	Yes	VOA Vial	DI Water	
1	151399	Yes	N/A	Yes	VOA Vial	DI Water	
2	151392	Yes	N/A	Yes	4 oz. Jar	NP	

2nd Review
Were all containers scanned into storage/lab? Initials
Are barcode labels on correct containers? Yes / No
Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA
Are all Hex Chrome stickers attached? Yes / No / NA
Are all QC stickers attached? Yes / No / NA
Are VOA stickers attached if bubbles noted? Yes / No / NA

RE: FPLP (03.0033554.02 Task 6.2)
ESS Laboratory Work Order Number: 21J0120

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:18 pm, Oct 13, 2021

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: FPLP

ESS Laboratory Work Order: 21J0120

SAMPLE RECEIPT

The following samples were received on October 06, 2021 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on October 6, 2021 at 12:11.

Lab Number	Sample Name	Matrix	Analysis
21J0120-01	C-33 Sand	Soil	6010C, 6020A, 7471B, 8100M, 8260B Low, 8270D

CERTIFICATE OF ANALYSIS

Client Project ID: FPLP

ESS Laboratory Work Order: 21J0120

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

21J0120-01 **Surrogate recovery(ies) above upper control limit (S+).**
1,2-Dichloroethane-d4 (136% @ 70-130%)

DJ10605-BS1 **Blank Spike recovery is above upper control limit (B+).**
Chloromethane (142% @ 70-130%), Dichlorodifluoromethane (131% @ 70-130%), Vinyl Chloride (136% @ 70-130%)

DJ10605-BSD1 **Blank Spike recovery is above upper control limit (B+).**
4-Methyl-2-Pentanone (135% @ 70-130%), Chloromethane (136% @ 70-130%), Diethyl Ether (133% @ 70-130%)

8270D Semi-Volatile Organic Compounds

D1J0065-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (113% @ 80-120%), 4,6-Dinitro-2-Methylphenol (107% @ 80-120%), Benzoic Acid (87% @ 80-120%), Di-n-octylphthalate (101% @ 80-120%), Pentachlorophenol (99% @ 80-120%)

D1J0065-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
4-Nitrophenol (25% @ 20%), Benzyl Alcohol (21% @ 20%)

D1J0065-CCV1 **Initial Calibration Verification recovery is below lower control limit (ICV-).**
Aniline

D1J0085-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (81% @ 80-120%), 4,6-Dinitro-2-Methylphenol (92% @ 80-120%), Benzoic Acid (108% @ 80-120%), Pentachlorophenol (85% @ 80-120%)

D1J0085-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Di-n-octylphthalate (32% @ 20%)

Total Metals

DJ10734-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Mercury (22% @ 20%)

No other observations noted.

End of Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
S+	Surrogate recovery(ies) above upper control limit (S+).
Q	Calibration required quadratic regression (Q).
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 21J0120
Date Received: 10/6/2021
Project Due Date: 10/14/2021
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 1 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: _____ Time: _____ By: _____
    b. Low Level VOA vials frozen: Date: 10/6/21 Time: 1211 By: TO

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted: _____ Date: _____ Time: _____ By: _____

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
1	214238	Yes	N/A	Yes	VOA Vial	DI Water	
1	214239	Yes	N/A	Yes	VOA Vial	DI Water	
1	214240	Yes	N/A	Yes	VOA Vial	MeOH

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 1:31 pm, Feb 09, 2022

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

D2B0131-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (61% @ 80-120%), 4,6-Dinitro-2-Methylphenol (55% @ 80-120%), Benzoic Acid (78% @ 80-120%)

D2B0131-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
2,4-Dinitrophenol (39% @ 20%), 4,6-Dinitro-2-Methylphenol (45% @ 20%), Benzoic Acid (22% @ 20%)

D2B0131-CCV1 **Percent difference between primary and confirmation results exceeds 40% (P).**
Pentachlorophenol (94% @ 80-120%)

DB20721-BS1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (37% @ 40-140%), Hexachlorocyclopentadiene (38% @ 40-140%)

No other observations noted.

End of Project Narrative.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
P	Percent difference between primary and confirmation results exceeds 40% (P).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probable Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.5 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 2-7-22 Time: 1214 By: TD

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 3:47 pm, Apr 24, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

SAMPLE RECEIPT

The following samples were received on April 16, 2020 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on April 16, 2020 at 1307.

Lab Number	Sample Name	Matrix	Analysis
20D0445-01	Pile C S-1 1.5in Dense Grade	Soil	6010C, 7471B, 8100M, 8260B Low, 8270D
20D0445-02	Pile C S-2 1.5in Dense Grade	Soil	6010C, 7471B, 8100M, 8260B Low, 8270D
20D0445-03	Pile C As-1 1.5in Dense Grade	Soil	6010C
20D0445-04	Pile C As-2 1.5in Dense Grade	Soil	6010C
20D0445-05	Pile C As-3 1.5in Dense Grade	Soil	6010C

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

D0D0339-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Bromomethane (82% @ 30%)

DD01726-BS1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (195% @ 70-130%)

DD01726-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (199% @ 70-130%)

8270D Semi-Volatile Organic Compounds

D0D0266-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (98% @ 80-120%), 4,6-Dinitro-2-Methylphenol (114% @ 80-120%), Benzoic Acid (97% @ 80-120%), Pentachlorophenol (101% @ 80-120%)

D0D0266-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Pyridine (25% @ 20%)

D0D0266-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Hexachlorocyclopentadiene (24% @ 20%)

D0D0351-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (94% @ 80-120%), 4,6-Dinitro-2-Methylphenol (107% @ 80-120%), Benzoic Acid (94% @ 80-120%), Pentachlorophenol (97% @ 80-120%)

D0D0351-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Hexachlorocyclopentadiene (28% @ 20%)

DD01519-BS1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (39% @ 40-140%)

DD01519-BSD1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (37% @ 40-140%)

No other observations noted.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

RE: NGRID Liquefication Project (03.0033554.04)
ESS Laboratory Work Order Number: 19K0808

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 1:42 pm, Dec 05, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

Shipped/Delivered Via: Client

ESS Project ID: 19K0808
Date Received: 11/25/2019
Project Due Date: 12/4/2019
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 0.9 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 11/25/19 Time: 1931 By: A

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted? Date: Time: By:

CERTIFICATE OF ANALYSIS

Sophia Narkiewicz
GZA GeoEnvironmental, Inc.
188 Valley Street
Providence, RI 02909

RE: 642 Allens Ave (03.0033554.04)
ESS Laboratory Work Order Number: 19G0613

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:15 pm, Jul 26, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

RE: 642 Allens Ave (03.0033554)
ESS Laboratory Work Order Number: 19F0752

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:59 pm, Jun 28, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

CF92443-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (136% @ 70-130%)

CF92443-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (29% @ 25%)

8270D Semi-Volatile Organic Compounds

C9F0401-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (96% @ 80-120%), 4,6-Dinitro-2-Methylphenol (102% @ 80-120%), Benzoic Acid (122% @ 80-120%), Pentachlorophenol (107% @ 80-120%)

C9F0401-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Benzoic Acid (22% @ 20%)

C9F0401-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Hexachlorocyclopentadiene (43% @ 20%), Isophorone (21% @ 20%), N-Nitrosodimethylamine (22% @ 20%)

Total Metals

CF92446-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Lead (24% @ 20%)

No other observations noted.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

Shipped/Delivered Via: Client

ESS Project ID: 19F0752
Date Received: 6/21/2019
Project Due Date: 6/28/2019
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.3 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. Were labs informed about short holds & rushes? Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 6/21/19 Time: 1600 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted: Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)

ESS Laboratory Work Order Number: 1901548

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 4:54 pm, Jan 28, 2019

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

1901548-01 **Surrogate recovery(ies) above upper control limit (S+).**
1,2-Dichloroethane-d4 (133% @ 70-130%)

CA92502-BS1 **Blank Spike recovery is above upper control limit (B+).**
2,2-Dichloropropane (132% @ 70-130%), Carbon Tetrachloride (132% @ 70-130%)

8270D Semi-Volatile Organic Compounds

C9A0457-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (87% @ 80-120%), Benzoic Acid (87% @ 80-120%), Pentachlorophenol (116% @ 80-120%)

C9A0457-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Hexachlorocyclopentadiene (35% @ 20%)

C9A0457-CCV1 **Initial Calibration Verification recovery is below lower control limit (ICV-).**
Hexachlorocyclopentadiene

CA92512-BS1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (38% @ 40-140%)

CA92512-BSD1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (38% @ 40-140%)

Total Metals

CA92528-SRM1 **Standard Reference Material is biased low (R-).**
Silver (42% @ 70-130%)

No other observations noted.

End of Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
S+	Surrogate recovery(ies) above upper control limit (S+).
R-	Standard Reference Material is biased low (R-).
Q	Calibration required quadratic regression (Q).
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/HDM

Shipped/Delivered Via: Client

ESS Project ID: 1901548
Date Received: 1/25/2019
Project Due Date: 1/28/2019
Days for Project: 1 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.1 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted? Date: Time: By:

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 1:31 pm, Feb 09, 2022

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

D2B0105-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Bromomethane (39% @ 30%)

DB20705-BS1 **Blank Spike recovery is below lower control limit (B-).**
Bromoform (69% @ 70-130%)

DB20705-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Bromomethane (140% @ 70-130%)

8270D Semi-Volatile Organic Compounds

D2B0131-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (61% @ 80-120%), 4,6-Dinitro-2-Methylphenol (55% @ 80-120%), Benzoic Acid (78% @ 80-120%)

D2B0131-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
2,4-Dinitrophenol (39% @ 20%), 4,6-Dinitro-2-Methylphenol (45% @ 20%), Benzoic Acid (22% @ 20%)

D2B0131-CCV1 **Percent difference between primary and confirmation results exceeds 40% (P).**
Pentachlorophenol (94% @ 80-120%)

DB20721-BS1 **Blank Spike recovery is below lower control limit (B-).**
4-Chloroaniline (37% @ 40-140%), Hexachlorocyclopentadiene (38% @ 40-140%)

No other observations noted.

End of Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
P	Percent difference between primary and confirmation results exceeds 40% (P).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probable Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 22B0164
Date Received: 2/7/2022
Project Due Date: 2/8/2022
Days for Project: 1 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.5 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 2-7-22 Time: 1214 By: TD

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted: Date: Time: By:

RE: FPLP (03.0033554.04 Task 6.2)
ESS Laboratory Work Order Number: 21D0181

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 6:07 pm, Apr 08, 2021

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: FPLP

ESS Laboratory Work Order: 21D0181

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 21D0181
Date Received: 4/7/2021
Project Due Date: 4/8/2021
Days for Project: 1 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 5.7 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / NA
10. Were any analyses received outside of hold time? Yes / No

11. Any Subcontracting needed? Yes / No
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? Yes / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? Yes / No / NA
13. Are the samples properly preserved? Yes / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 4/7/21 Time: 1335 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / No
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:27 pm, Oct 01, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

DI02437-BS1 **Blank Spike recovery is above upper control limit (B+).**
2-Hexanone (131% @ 70-130%), Acetone (142% @ 70-130%), Tetrachloroethene (133% @ 70-130%)

DI02437-BSD1 **Blank Spike recovery is above upper control limit (B+).**
Tetrachloroethene (138% @ 70-130%)

8100M Total Petroleum Hydrocarbons

D0I0407-CCV2 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Decane (C10) (24% @ 20%), Nonane (C9) (27% @ 20%)

8270D Semi-Volatile Organic Compounds

D0I0342-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (72% @ 80-120%), 4,6-Dinitro-2-Methylphenol (85% @ 80-120%), Benzoic Acid (93% @ 80-120%), Pentachlorophenol (108% @ 80-120%)

D0I0342-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
2,4-Dinitrophenol (28% @ 20%), N-Nitrosodimethylamine (25% @ 20%)

DI02427-BS1 **Blank Spike recovery is below lower control limit (B-).**
Aniline (34% @ 40-140%)

DI02427-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Aniline (36% @ 40-140%)

No other observations noted.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: Client

ESS Project ID: 2010659
Date Received: 9/23/2020
Project Due Date: 9/30/2020
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 2.6 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 9/23/20 Time: 15:42 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
1	87253	Yes	N/A	Yes	VOA Vial	MeOH	
1	87254	Yes	N/A	Yes	VOA Vial	DI Water	
1	87255	Yes	N/A	Yes	VOA Vial	DI Water	
1	87256	Yes	N/A	Yes	8 oz jar	NP	

2nd Review
Were all containers scanned into storage/lab? Initials: MA (Yes) / No
Are barcode labels on correct containers? Yes / No / NA
Are all Flashpoint stickers attached/container ID # circled? Yes / No / NA
Are all Hex Chrome stickers attached? Yes / No / NA
Are all QC stickers attached? Yes / No / NA
Are VOA stickers attached if bubbles noted? Yes / No / NA

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 5:36 pm, Jul 16, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

ESS Laboratory Work Order: 20G0354

SAMPLE RECEIPT

The following samples were received on July 14, 2020 for the analyses specified on the enclosed Chain of Custody Record.

Revision 1 July 16, 2020: This report has been revised to include lowered reporting limit for Beryllium for 20G0354-01.

Lab Number	Sample Name	Matrix	Analysis
20G0354-01	PJ Keating 1.5in Dense Grade Pile E S-1	Soil	6010C, 6020A, 7010, 7471B, 8100M, 8260B Low, 8270D
20G0354-02	PJ Keating 1.5in Dense Grade Pile E AS-1	Soil	7010
20G0354-03	PJ Keating 1.5in Dense Grade Pile E AS-2	Soil	7010
20G0354-04	PJ Keating 1.5in Dense Grade Pile E AS-3	Soil	7010

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

DG01445-BS1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (146% @ 70-130%)

DG01445-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
Acetone (44% @ 25%)

8270D Semi-Volatile Organic Compounds

D0G0192-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (109% @ 80-120%), 4,6-Dinitro-2-Methylphenol (106% @ 80-120%), Benzoic Acid (96% @ 80-120%)

D0G0192-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Hexachlorocyclopentadiene (21% @ 20%)

Total Metals

DG01404-BS5 **Blank Spike recovery is below lower control limit (B-).**
Thallium (105% @ 80-120%)

DG01404-BSD3 **Blank Spike recovery is above upper control limit (B+).**
Antimony (236% @ 40-160%)

DG01404-BSD3 **Blank Spike recovery is below lower control limit (B-).**
Chromium (43% @ 80-120%), Copper (47% @ 73-127%), Nickel (36% @ 65-132%), Selenium (24% @ 52-147%), Zinc (49% @ 80-120%)

DG01404-BSD3 **Relative percent difference for duplicate is outside of criteria (D+).**
Antimony (97% @ 30%), Copper (67% @ 30%), Nickel (92% @ 30%), Selenium (125% @ 30%), Silver (48% @ 30%), Zinc (71% @ 30%)

DG01404-BSD5 **Relative percent difference for duplicate is outside of criteria (D+).**
Thallium (46% @ 30%)

No other observations noted.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: Client

ESS Project ID: 20G0354
Date Received: 7/14/2020
Project Due Date: 7/15/2020
Days for Project: 1 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 5.9 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** (Yes) / No / NA
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs:
    Analysis:
    TAT:
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / (No)
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 7/14/20 Time: 16:37 By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted? Date: Time: By:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)

RE: FPLP (03.0033554.05 Task 6.2)
ESS Laboratory Work Order Number: 20F0959

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 2:31 pm, Jun 29, 2020

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

SAMPLE RECEIPT

The following samples were received on June 25, 2020 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on June 25, 2020 at 1312.

Lab Number	Sample Name	Matrix	Analysis
20F0959-01	SP062520-1	Soil	6010C, 6020A, 7471B, 8100M, 8260B Low, 8270D

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

DF02651-BS1 **Blank Spike recovery is below lower control limit (B-).**
1,4-Dioxane (69% @ 70-130%), Acetone (66% @ 70-130%)

DF02651-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Bromoform (64% @ 70-130%)

DF02651-BSD1 **Relative percent difference for duplicate is outside of criteria (D+).**
1,4-Dioxane (37% @ 20%), Acetone (34% @ 25%)

8270D Semi-Volatile Organic Compounds

D0F0492-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (128% @ 80-120%), 4,6-Dinitro-2-Methylphenol (122% @ 80-120%), Benzoic Acid (126% @ 80-120%), Pentachlorophenol (125% @ 80-120%)

D0F0492-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2,4-Dinitrophenol (28% @ 20%), 4,6-Dinitro-2-Methylphenol (22% @ 20%), Benzoic Acid (26% @ 20%), Pentachlorophenol (25% @ 20%), Pyridine (35% @ 20%)

D0F0504-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (91% @ 80-120%), 4,6-Dinitro-2-Methylphenol (86% @ 80-120%), Benzoic Acid (95% @ 80-120%), Pentachlorophenol (104% @ 80-120%)

D0F0504-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
Pyridine (29% @ 20%)

No other observations noted.
