The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

Sterling Analytical Lab - West Springfield, MA	Sulfur, Sulfur (Subcontracted)

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: FPLP

ESS Laboratory Work Order: 21E0013

SAMPLE RECEIPT

The following samples were received on May 03, 2021 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on May 3,2021 at 13:11.

Lab Number	Sample Name	Matrix	Analysis
21E0013-01	SP050321-1	Soil	6010, 6010C, 7471B, 8100M, 8260B Low, 8270D, 9014
21E0013-02	SP050321-2	Soil	6010, 6010C, 7471B, 8100M, 8260B Low, 8270D, 9014
21E0013-03	SP050321-3	Soil	6010, 6010C, 7471B, 8100M, 8260B Low, 8270D, 9014
21E0013-04	SP050321-4	Soil	6010, 6010C, 7471B, 8100M, 8260B Low, 8270D, 9014

PROJECT NARRATIVE

8270D Semi-Volatile Organic Compounds

D1E0030-CCV1	**Calibration required quadratic regression (Q).**
	2,4-Dinitrophenol (100% @ 80-120%), 4,6-Dinitro-2-Methylphenol (94% @ 80-120%), Pentachlorophenol (108% @ 80-120%)
D1E0030-CCV1	**Continuing Calibration %Diff/Drift is above control limit (CD+).**
	2,4-Dimethylphenol (21% @ 20%)
D1E0031-CCV1	**Calibration required quadratic regression (Q).**
	2,4-Dinitrophenol (101% @ 80-120%), 4,6-Dinitro-2-Methylphenol (94% @ 80-120%), Benzoic Acid (92% @ 80-120%), Di-n-octylphthalate (121% @ 80-120%)
D1E0031-CCV1	**Continuing Calibration %Diff/Drift is above control limit (CD+).**
	4-Chloroaniline (21% @ 20%), Aniline (21% @ 20%), Di-n-octylphthalate (21% @ 20%)

No other observations noted.

End of Project Narrative.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

Shipped/Delivered Via: Client

ESS Project ID: 21E0013
Date Received: 5/3/2021
Project Due Date: 5/10/2021
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: -6.1 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? Yes / (No)
    ESS Sample IDs: 1 - 4
    Analysis: Total Sulfur
    TAT: 5 Day
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: ____ Time: ____ By: ____
    b. Low Level VOA vials frozen: Date: 5/3/21 Time: 1211 By: ____

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted? ____ Date: ____ Time: ____ By: ____

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

REVIEWED
By ESS Laboratory at 4:40 pm, May 28, 2021

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

DE12528-BS1 **Blank Spike recovery is above upper control limit (B+).**
Acetone (149% @ 70-130%)

8270D Semi-Volatile Organic Compounds

D1E0408-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (82% @ 80-120%), 4,6-Dinitro-2-Methylphenol (92% @ 80-120%), Benzoic Acid (78% @ 80-120%), Di-n-octylphthalate (109% @ 80-120%)

D1E0408-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Benzoic Acid (22% @ 20%), N-nitrosodiphenylamine (25% @ 20%)

D1E0416-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (69% @ 80-120%), 4,6-Dinitro-2-Methylphenol (94% @ 80-120%), Pentachlorophenol (110% @ 80-120%)

D1E0416-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
2-Nitroaniline (37% @ 20%), N-Nitrosodimethylamine (23% @ 20%), N-Nitroso-Di-n-Propylamine (30% @ 20%)

D1E0416-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
2,4-Dinitrophenol (31% @ 20%), Benzoic Acid (33% @ 20%), N-nitrosodiphenylamine (27% @ 20%)

DE12123-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Hexachlorocyclopentadiene (36% @ 40-140%)

No other observations noted.

ESS Laboratory Work Order: 21E0742

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 21E0742
Date Received: 5/21/2021
Project Due Date: 5/28/2021
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: -3.8 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? (Yes) / No
    ESS Sample IDs: 1,2,3,4,
    Analysis: TOTAL SULFUR
    TAT: STD
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA

13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By:
    b. Low Level VOA vials frozen: Date: 5/21/21 Time: 1151 By: TO

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / (No)
    Who was contacted? Date: Time: By:

RE: FPLP (33554.04 Task 6.0)
ESS Laboratory Work Order Number: 21F0232

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:56 pm, Jun 14, 2021

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

Sterling Analytical Lab - West Springfield, MA	Sulfur, Sulfur (Subcontracted)

CERTIFICATE OF ANALYSIS

Client Name: GZA GeoEnvironmental, Inc.
Client Project ID: FPLP

ESS Laboratory Work Order: 21F0232

SAMPLE RECEIPT

The following samples were received on June 07, 2021 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on June 7, 2021 at 16:35.

The cooler temperature was not within the acceptance limit of <6°C, however, samples were delivered on ice and therefore meet regulatory criteria.

Lab Number	Sample Name	Matrix	Analysis
21F0232-01	SP060721-1	Soil	6010, 6010C, 7471B, 8100M, 8260B Low, 8270D, 9014

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
ICV+	Initial Calibration Verification recovery is above upper control limit (ICV+).
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

RE: FPLP (3355404 Task 6.0)
ESS Laboratory Work Order Number: 21H0604

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 12:23 pm, Aug 26, 2021

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
ICV+	Initial Calibration Verification recovery is above upper control limit (ICV+).
D+	Relative percent difference for duplicate is outside of criteria (D+).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Work Order Number: 21I0685

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laboratory Director

REVIEWED
By ESS Laboratory at 3:53 pm, Sep 28, 2021

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

Sterling Analytical Lab - West Springfield, MA	Sulfur, Sulfur (Subcontracted)

ESS Laboratory Work Order: 21I0685

SAMPLE RECEIPT

The following samples were received on September 20, 2021 for the analyses specified on the enclosed Chain of Custody Record.

Low Level VOA vials were frozen by ESS Laboratory on September 20, 2021 at 15:40.

Lab Number	Sample Name	Matrix	Analysis
21I0685-01	SP092021-1	Soil	6010, 6010C, 7471B, 8100M, 8260B, 8260B Low, 8270D, 9014
21I0685-02	SP092021-2	Soil	6010, 6010C, 7471B, 8100M, 8260B, 8260B Low, 8270D, 9014

PROJECT NARRATIVE

5035/8260B Volatile Organic Compounds / Low Level

21I0685-01 **Reported above the quantitation limit; Estimated value (E).**
1,2,4-Trimethylbenzene , 1,3,5-Trimethylbenzene , 4-Isopropyltoluene , Ethylbenzene , Isopropylbenzene , Naphthalene , n-Butylbenzene , n-Propylbenzene , sec-Butylbenzene

21I0685-02 **Reported above the quantitation limit; Estimated value (E).**
1,2,4-Trimethylbenzene , Ethylbenzene , Naphthalene , n-Butylbenzene

5035/8260B Volatile Organic Compounds / Methanol

D1I0318-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Tetrachloroethene (31% @ 30%)

DI12121-BS1 **Blank Spike recovery is above upper control limit (B+).**
1,4-Dioxane - Screen (255% @ 44-241%)

DI12121-BS1 **Blank Spike recovery is below lower control limit (B-).**
Tetrachloroethene (68% @ 70-130%)

8100M Total Petroleum Hydrocarbons

D1I0328-CCV3 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
O-Terphenyl (21% @ 20%)

8270D Semi-Volatile Organic Compounds

21I0685-01 **Elevated Method Reporting Limits due to sample matrix (EL).**

21I0685-02 **Elevated Method Reporting Limits due to sample matrix (EL).**

D1I0322-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (89% @ 80-120%), 4,6-Dinitro-2-Methylphenol (87% @ 80-120%), Benzoic Acid (67% @ 80-120%), Pentachlorophenol (81% @ 80-120%)

D1I0322-CCV1 **Continuing Calibration %Diff/Drift is above control limit (CD+).**
3-Nitroaniline (21% @ 20%), Di-n-octylphthalate (31% @ 20%), Pyridine (39% @ 20%)

D1I0322-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
Benzoic Acid (33% @ 20%)

D1I0322-CCV1 **Initial Calibration Verification recovery is above upper control limit (ICV+).**
2,4-Dinitrophenol

D1I0351-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (73% @ 80-120%), 4,6-Dinitro-2-Methylphenol (88% @ 80-120%), Di-n-octylphthalate (149% @ 80-120%), Pentachlorophenol (92% @ 80-120%)

D1I0351-CCV1 **Continuing Calibration %Diff/Drift is below control limit (CD-).**
2,4-Dinitrophenol (27% @ 20%)

No other observations noted.

End of Project Narrative.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
J	Reported between MDL and MRL
ICV+	Initial Calibration Verification recovery is above upper control limit (ICV+).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
E	Reported above the quantitation limit; Estimated value (E).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
B-	Blank Spike recovery is below lower control limit (B-).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probably Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Work Order Number: 22C0962

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 4:40 pm, Apr 01, 2022

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

DC22919-BS1 **Blank Spike recovery is below lower control limit (B-).**
Tetrachloroethene (63% @ 70-130%)

DC22919-BSD1 **Blank Spike recovery is below lower control limit (B-).**
Tetrachloroethene (64% @ 70-130%)

8270D Semi-Volatile Organic Compounds

D2C0523-CCV1 **Calibration required quadratic regression (Q).**
2,4-Dinitrophenol (109% @ 80-120%), 4,6-Dinitro-2-Methylphenol (93% @ 80-120%), Benzoic Acid (105% @ 80-120%), Pentachlorophenol (101% @ 80-120%)

D2C0523-CCV1 **Initial Calibration Verification recovery is below lower control limit (ICV-).**
Aniline

D2C0523-TUN1 **Pentachlorophenol tailing factor > 2.**

Total Metals

22C0962-01 **Elevated Method Reporting Limits due to sample matrix (EL).**
Silver

22C0962-02 **Elevated Method Reporting Limits due to sample matrix (EL).**
Silver

No other observations noted.

End of Project Narrative.

CURRENT SW-846 METHODOLOGY VERSIONS

Analytical Methods

1010A - Flashpoint
6010C - ICP
6020A - ICP MS
7010 - Graphite Furnace
7196A - Hexavalent Chromium
7470A - Aqueous Mercury
7471B - Solid Mercury
8011 - EDB/DBCP/TCP
8015C - GRO/DRO
8081B - Pesticides
8082A - PCB
8100M - TPH
8151A - Herbicides
8260B - VOA
8270D - SVOA
8270D SIM - SVOA Low Level
9014 - Cyanide
9038 - Sulfate
9040C - Aqueous pH
9045D - Solid pH (Corrosivity)
9050A - Specific Conductance
9056A - Anions (IC)
9060A - TOC
9095B - Paint Filter
MADEP 04-1.1 - EPH
MADEP 18-2.1 - VPH

Prep Methods

3005A - Aqueous ICP Digestion
3020A - Aqueous Graphite Furnace / ICP MS Digestion
3050B - Solid ICP / Graphite Furnace / ICP MS Digestion
3060A - Solid Hexavalent Chromium Digestion
3510C - Separatory Funnel Extraction
3520C - Liquid / Liquid Extraction
3540C - Manual Soxhlet Extraction
3541 - Automated Soxhlet Extraction
3546 - Microwave Extraction
3580A - Waste Dilution
5030B - Aqueous Purge and Trap
5030C - Aqueous Purge and Trap
5035A - Solid Purge and Trap

SW846 Reactivity Methods 7.3.3.2 (Reactive Cyanide) and 7.3.4.1 (Reactive Sulfide) have been withdrawn by EPA. These methods are reported per client request and are not NELAP accredited.

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
PT	Pentachlorophenol tailing factor > 2.
J	Reported between MDL and MRL
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
EL	Elevated Method Reporting Limits due to sample matrix (EL).
E	Reported above the quantitation limit; Estimated value (E).
D	Diluted.
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B-	Blank Spike recovery is below lower control limit (B-).
B	Present in Method Blank (B).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probable Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

Shipped/Delivered Via: ESS Courier

ESS Project ID: 22C0962
Date Received: 3/25/2022
Project Due Date: 4/1/2022
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: -1 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. **Were labs informed about short holds & rushes?** Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? (Yes) / No
    ESS Sample IDs: 1-2
    Analysis: Sulfur
    TAT: 5 day
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: ____ Time: ____ By: ____
    b. Low Level VOA vials frozen: Date: 3-25-22 Time: 1523 By: [signature]

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? ____ Date: ____ Time: ____ By: ____

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)
1	270827	Yes	N/A	Yes	VOA Vial	DI Water	
1	270828	Yes	N/A	Yes	VOA Vial	DI Water	
1	270831	Yes	N/A	Yes	VOA Vial	MeOH	
1	270833	Yes	N/A	Yes	8 oz jar	NP	
1	270834	Yes	N/A	Yes	8 oz jar	NP	
1	270837	Yes	N/A	Yes	4 oz. Jar	NP	
2	270829	Yes	N/A	Yes	VOA Vial	DI Water	
2	270830	Yes	N/A	Yes	VOA Vial	DI Water	
2	270832	Yes	N/A	Yes	VOA Vial	MeOH	
2	270835	Yes	N/A	Yes	8 oz jar	NP	
2	270836	Yes	N/A	Yes	8 oz jar	NP	
2	270838	Yes	N/A	Yes	4 oz. Jar	NP	

2nd Review
Were all containers scanned into storage/lab? Initials [signature]
Are barcode labels on correct containers? (Yes) / No
Are all Flashpoint stickers attached/container ID # circled? Yes / No / (NA)

ESS Laboratory Sample and Cooler Receipt Checklist

Client: GZA - Providence, RI - GZA/KPB

ESS Project ID: 22C0962

Date Received: 3/25/2022

Are all Hex Chrome stickers attached? Yes / No / NA

Are all QC stickers attached? Yes / No / NA

Are VOA stickers attached if bubbles noted? Yes / No / NA

RE: FPLP (03.0033554.04 Tank 6.2)
ESS Laboratory Work Order Number: 22D1200

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

REVIEWED
By ESS Laboratory at 3:17 pm, May 11, 2022

Analytical Summary
The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with TNI and relative state standards, and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Subcontracted Analyses

Notes and Definitions

U	Analyte included in the analysis, but not detected
Q	Calibration required quadratic regression (Q).
J	Reported between MDL and MRL
ICV-	Initial Calibration Verification recovery is below lower control limit (ICV-).
D	Diluted.
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
B-	Blank Spike recovery is below lower control limit (B-).
B	Present in Method Blank (B).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report
RL	Reporting Limit
EDL	Estimated Detection Limit
MF	Membrane Filtration
MPN	Most Probable Number
TNTC	Too numerous to Count
CFU	Colony Forming Units

Sample Description
Analysis of Soil Samples

Samples Analyzed

Enclosed are Report No(s): 76750, 76751

*Results reported on 'Dry Basis'.

Sulfur Total Blank = <0.05ppm

LCS Lo Check 0.100 = 0.092ppm

ICV 1.00 = 1.006ppm

Thank you for your business

ESS Project ID: 22D1200
Date Received: 4/29/2022
Project Due Date: 5/6/2022
Days for Project: 5 Day

1. Air bill manifest present? No
   Air No.: NA
2. Were custody seals present? No
3. Is radiation count <100 CPM? Yes
4. Is a Cooler Present? Yes
   Temp: 4.9 Iced with: Ice
5. Was COC signed and dated by client? Yes
6. Does COC match bottles? Yes
7. Is COC complete and correct? Yes
8. Were samples received intact? Yes
9. Were labs informed about **short holds & rushes**? Yes / No / (NA)
10. Were any analyses received outside of hold time? Yes / (No)

11. Any Subcontracting needed? (Yes) / No
    ESS Sample IDs: **1--2**
    Analysis: **Sulfur**
    TAT: **5 day**
12. Were VOAs received? (Yes) / No
    a. Air bubbles in aqueous VOAs? Yes / No
    b. Does methanol cover soil completely? (Yes) / No / NA
13. Are the samples properly preserved? (Yes) / No
    a. If metals preserved upon receipt: Date: Time: By/Acid Lot#:
    b. Low Level VOA vials frozen: Date: Time: By:

Sample Receiving Notes:

14. Was there a need to contact Project Manager? Yes / (No)
    a. Was there a need to contact the client? Yes / No
    Who was contacted? Date: Time: By:

Resolution:

Sample Number	Container ID	Proper Container	Air Bubbles Present	Sufficient Volume	Container Type	Preservative	Record pH (Cyanide and 608 Pesticides)

New England Liner Systems, Inc.

Construction Quality Control

1. INTRODUCTION

1 – Purpose

This manual addresses the Quality Control Program developed and utilized by New England Liner Systems, Inc. installation personnel to assure the quality of workmanship and the installation integrity of geomembranes and other geosynthetic products.

2 - Scope

All geosynthetic components of lining systems will be addressed in this manual, including geomembranes, geotextiles, geonets, geocomposites, and geosynthetic clay liners.

2. - MATERIAL DELIVERY

2.1 - Documentation of Material Delivery

A Quality Assurance representative should be present, whenever possible, to observe and assist in material delivery and unloading on site. This representative may be employed by the contractor or may be an employee of an independent CQA firm if so required by the project specifications. This QA representative is to note any material received in damaged state and to remove any necessary conformance samples.

Upon mobilization to site, a New England Liner Systems representative shall:

- Verify the equipment used on site is adequate and does not risk damage to the geomembrane or other materials.
- Mark rolls or portions of rolls that appear damaged.
- Verify that storage of materials ensures adequate protection against dirt, theft, vandalism, and passage of vehicles.
- Ensure that rolls are properly labeled and that labeling corresponds with the manufacturers quality control and shipping documents.
- Assist the Third Party QA Representative, if present, with material sampling or record keeping as may be required by the project specifications.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

3. - GEOMEMBRANE INSTALLATION

3.1 Earth Work

1 - *Standard Responsibilities* - The General and / or Earthwork Contractor shall be responsible for preparing and maintaining the subgrade in a condition suitable for installation of the liner unless specifically agreed otherwise.

2 - *Minimum QC Guidelines* - In cases where no site specific earthwork quality control guidelines exist, the following general guidelines should be followed.

a - Surfaces to be lined shall be smooth and free of debris, roots, and angular or sharp rocks. All fill shall consist of well-graded material, free of organics, trash, clayballs, or other deleterious material that may cause damage to the geomembrane. Unless otherwise required by design specifications, the upper six inches (6") of the finished subgrade shall not contain stones or debris larger than one-half inch (1/2"). The subgrade shall be compacted in accordance with design specifications, but in no event less than is required to provide a firm unyielding foundation sufficient to permit the movement of vehicles and welding equipment over the subgrade without causing rutting or other deleterious effects. The subgrade shall have no sudden sharp or abrupt changes in grade.

b - The Earthwork Contractor shall protect the subgrade from desiccation, flooding, and freezing. Protection, if required, may consist of a thin plastic protective cover *(or other material as approved by the engineer)* installed over the completed subgrade until such time as the placement of geomembrane liner begins. Subgrades found to have desiccation cracks greater than one-half inch (1/2") in width or depth, or which exhibit swelling, heaving, or other similar conditions shall be replaced or reworked by the General and / or Earthwork Contractor to remove these defects.

3 - *Surface Acceptance*. - Upon request, New England Liner Systems' Site Supervisor will provide the Owner's and / or Contractor's Representatives with a written acceptance of the surface to be lined. This acceptance will be limited to an amount of area that New England Liner Systems is capable of lining during a particular work shift. Subsequent repairs to the subgrade and the surface shall remain the responsibility of the Earthwork Contractor. An example of New England Liner Systems' Subgrade Surface Acceptance form is included in Appendix A.

3.2 - Crest Anchorage System

The anchor trench shall be excavated by the General and/or the Earthwork Contractor to lines and widths shown on the design drawings prior to geomembrane placement.

Anchor trenches excavated in clay soils susceptible to desiccation cracks should be excavated only the distance required for that days liner placement to minimize the potential of desiccation cracking of the clay soils.

Corners in the anchor trench shall be slightly rounded where the geomembrane adjoins the trench to minimize sharp bends in the geomembrane.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

3.3 - Preparation for Geomembrane Deployment

1 - *Panel Layout* - Prior to commencement of liner deployment, layout drawings shall be produced to indicate the panel configuration and general location of field seams for the project.

2 – *Identification* - Each panel used for the installation will be given a number, which will be correlated with a batch or roll number. This panel identification number shall be related on the NELS Panel Placement Form to a manufacturers roll or production number.

3.4 - Field Panel Placement

1 - *Weather Conditions* - Geomembrane deployment will generally not be done during any precipitation, in the presence of excessive moisture *(i.e. fog, dew* or *snow),* in an area of standing water, or during high winds. New England Liner Systems' site supervisor shall have sole desecration in determining the suitability of conditions for geomembrane deployment.

2 - *Location* - New England Liner Systems will attempt to install field panels as indicated on the layout drawing. If the panels are deployed in a location other than that indicated on the layout drawings, the revised location will be noted in the field on a record set of " As-Built" drawings. These notations will be maintained and submitted by New England Liner Systems and / or third party QA Consultants as required by project specifications, or contract requirements, on a site-specific basis.

3 - *Documentation of Panel Placement* - Information relating to geomembrane panel placement including date, time, panel number, and panel dimensions may be maintained on a site specific bases, on the Panel Placement Form as presented in Appendix A.

4 - *Method of Deployment* – Based upon site conditions, and to the extent possible, the method and equipment used to deploy the panels should not damage the geomembrane or the supporting subgrade surface. No personnel working on the geomembrane will wear shoes that can damage the geomembrane or engage in actions which could result in damage to the geomembrane. Adequate temporary loading and / or anchoring, (i.e. sandbags, tires), which will not damage the geomembrane, will be placed to prevent uplift of the geomembrane by wind. The geomembrane will be deployed with slack to allow for typical thermal expansion and contraction.

5 - *Damage Repairs* - Any area of a panel seriously damaged (torn, twisted, or crimped) will be marked and repaired in accordance with Paragraph 5 of this document.

3.5 - Geomembrane Field Seaming

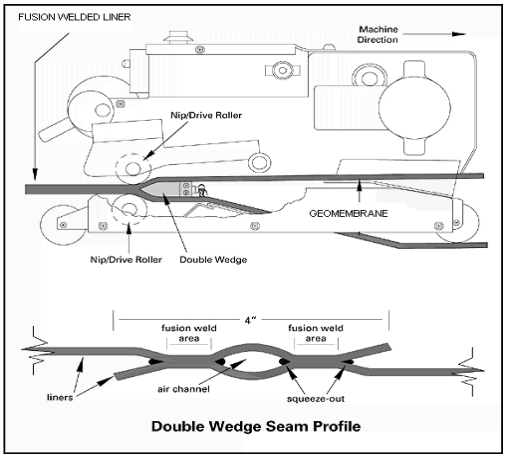
1 - *General Requirements – Layout* - In general, seams shall be oriented parallel to the slope, i.e., oriented along, not across the slope. Each seam made in the field shall be numbered and indicated on the record drawings. Seaming information to include seam number, welder ID, machine number, and temperature setting may be recorded on New England Liner Systems' Panel Seaming Form as presented in Appendix A.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

2 - *Personnel* - All personnel performing seaming operations shall be trained in the operation of the specific seaming equipment being used and will qualify by successfully welding a test seam as described in Paragraph 3.5.3.

3- *Equipment* - Fusion Welding consists of placing a heated wedge, mounted on a self propelled vehicular unit, between two over-lapped sheets such that the surfaces of both sheets are heated above the polyethylene's melting point. After being heated by the wedge, the overlapped panels pass through a set of pre-set pressure wheels which compress the two panels together to form the weld. The fusion welder is equipped with a device which continuously monitors the temperature of the wedge.



Double Wedge Seam Profile

Extrusion fillet welding consists of introducing a ribbon of molten resin along the edge of the overlap of the two geomembrane sheets to be welded. A hot-air preheat and the addition of molten polymer causes some of the material of each sheet to be liquefied resulting in a homogeneous bond between the molten weld bead and the surfaces of the overlapped sheets. The extrusion welder is equipped with gauges giving the temperature in the apparatus and a numerical setting for the preheating unit.

4 - *Weather Conditions for Seaming* - New England Liner Systems relies on the experience of the field superintendent and the results of test seams to determine whether seaming is restricted by weather. Many factors, such as the geomembrane temperature, humidity, wind, precipitation, etc., can effect the integrity of field seams and must be taken into account when deciding whether or not seaming should proceed. Test seams, as described in Paragraph **3.5.3,** are required prior to daily production seaming to determine if the weather conditions will effect New England Liner Systems ability to produce quality seams. Additional non-destructive and destructive testing of production seams substantiate the decision made by the field superintendent to seam on any given day.

5 - *Seam Preparation - Fusion Welding*

- Overlap the panels of geomembrane approximately four (4") to six (6") inches prior to welding. Clean the seam area prior to seaming to assure the area is clean and free of moisture, dust, dirt, or debris of any kind.
- No grinding is required for fusion welding.
- Adjust the panels so that seams are aligned with the fewest possible number of wrinkles and "fishmouths".
- A movable protective layer may be used, at the discretion of the New England Liner Systems Project Superintendent, directly below the overlap of the geomembrane that is to be seamed to prevent build-up of dirt or moisture between the panels.

5 - *Seam Preparation - Extrusion Fillet Welding*

- Whenever possible, the sheet will be pre-beveled prior to heat tacking into place.
- Overlap the panels of geomembrane approximately three inches (3").

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

- Using a hot-air device, temporarily tack the panels of geomembrane to be welded, taking care not to damage the geomembrane.

- Clean the seam area prior to seaming to assure the area is clean and free of moisture, dust, dirt, and debris of any kind.

5 - *Seam Preparation - Extrusion Fillet Welding* (cont'd)

- Grind seam overlap prior to welding within one (1) hour of the welding operation in a manner that does not damage the geomembrane. Grind marks should be covered with extrudate whenever possible. In all cases grinding should not extend more than one-quarter inch (1/4") past the edge of the area covered by the extrudate during welding.

- Purge the extruder prior to beginning the seam to remove all heat-degraded extrudate from the barrel.

- Keep welding rod clean and dry.

6 - *Trial Welds* - Trial welds shall be conducted by welding technicians prior to each seaming period, every five (5) hours, as weather conditions dictate or as requested by NELS CQC personnel if welding problems are suspected. All trial welds will be conducted under the same conditions as will be encountered during actual seaming. Once qualified by a passing trial weld, welding technicians will not change parameters without performing another trial weld. Trail welds for fusion welds will be 15 feet long and extrusion trial welds will be a minimum of four feet (4') long. Upon completion of trial weld the welding technician shall:

- Visually inspect the seam for squeeze out, footprint, pressure, and general appearance.

- Cut three (3) one inch (1") wide specimens, one (1) from the middle of the seam and one foot (1') from each end of the test seam using a one inch (1") die cutter.

- Test specimens using a field tensiometer.

- Record test data in NELS Trial Weld data sheet.

In order for a trial weld to be considered acceptable, all three specimens must meet the following criteria:

- Exhibit Film Tearing Bond (FTB).

- Meet or exceed the minimum peel strength values listed in the membrane manufacturers material specification sheet or project specifications.

If any specimen is nonconforming the entire procedure shall be repeated. In the case of double track fusion welded seams, both welds must pass in order to be considered acceptable.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

Trial Weld Documentation – NELS' CQC Coordinator and / or Assistant will be present during trial weld testing and will record the date, time, operator, machine number, ambient and operating temperatures, speed setting, peel values, and pass / fail designation. All trail weld records shall be maintained on New England Liner Systems Trial Weld Form as exhibited in Appendix A.

The New England Liner Systems CQC Coordinator and / or Superintendent will give final approval to proceed with welding.

7 - *General Seaming Procedures* - Seaming shall extend into the anchor trench.

- While welding a seam, monitor and maintain the proper overlap.
- Inspect seam area to assure it is clean and free of moisture, dust, dirt, and debris of any kind.
- Welding Technicians will periodically check machine operating temperature and speed, and mark this information on the geomembrane.
- Align wrinkles at the seam overlap to allow welding through the wrinkle.
- "Fishmouths" or wrinkles at seam overlaps that cannot be welded through shall be cut along the ridge in order to achieve a flat overlap. The cut "fishmouth" or wrinkle shall be heat-tacked flat and extruded or patched with an oval or round patch of the same geomembrane extending a minimum of three inches (3") beyond the cut in all directions.
- All cross / butt seams between two (2) rows of seamed panels shall be welded during the coolest time of the day when practical, to allow for typical thermal expansion of the geomembrane.
- Prior to welding cross/butt seams, the top and bottom overlap of intersecting fusion-welded seams will be trimmed six inches (6"). Intersecting extrusion fillet welded seams will be ground to flatten the extrusion bead prior to welding butt seams.
- All "T" joints produced as a result of cross/butt seams shall be extrusion fillet welded. Overlap on each "leg" of the "T" joint will be trimmed back six inches (6"). Then grind three inches (3") minimum on each of the three (3) legs of the "T" and extrusion weld all of the area prepared by grinding.
- Whenever possible, Welding Technicians will cut a one inch (1") peel specimen at the end of every seam. Prior to welding the next seam, the specimen will be tested for peel.
- In the event non-complying seam test strips are encountered, the welding machine will be taken out of service until a passing trial weld is obtained, and additional peel specimens will be taken to localize the flaw. The CQC Coordinator may, after consulting with NEW ENGLAND LINER SYSTEMS' Site Superintendent, take destructive samples from any seam, if defects are suspected.

8 - *Seaming Documentation* - Welding Technicians will mark on the liner with permanent markers at the start of all seams information regarding, date, time, Welding Technician ID, machine number, and set temperature.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

- CQC Coordinator or Assistant will record date, time, seam number, Technician ID, machine ID, set temperature, and speed, conditions on the NEW ENGLAND LINER SYSTEMS Panel Seaming Form (See Appendix A).

- Welding Technicians will periodically check operating temperature and speed and mark the information along the seam.

- CQC Coordinator will make periodic checks on welding operations to verify overlap, cleanliness, etc.

4. SEAM TESTING - GEOMEMBRANES

4.1 – *Concept* - The welded seam created by New England Liner Systems' fusion welding process is composed of a primary seam and a secondary track that creates an unwelded channel. The presence of an unwelded channel permits New England Liner Systems fusion seams to be tested by inflating the sealed channel with air to a predetermined pressure and observing the stability of the pressurized channel over time.

New England Liner Systems performs non-destructive air-pressure testing in accordance with Geosynthetic Research Institutes Test Method GM-6.

4.2 - *Air Pressure Testing*

1. Equipment for Air Testing

- An air pump (manual or motor driven) capable of generating and sustaining a pressure between 20 to 60 psi.

- A rubber hose with fittings and connections.

- A sharp hollow needle, or other approved pressure feed device with a pressure gauge capable of reading and sustaining a pressure between 0 to 60 psi.

2 - *Procedure for Air Testing*

- Seal both ends of the seam to be tested.

- Insert needle or other approved pressure feed device into the sealed channel created by the fusion weld.

- Inflate the test channel in accordance with schedule detailed in table 1 and maintain the pressure within the range listed.

- Initial pressure settings are recorded after an optional two minute stabilization period. The purpose of this "relaxing period" is to permit the air temperature and pressure to stabilize.

- The initial pressure reading may be recorded once stabilization has taken place.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

- Observe and record the air pressure five (5) minutes after the initial pressure setting is recorded. If loss of pressure exceeds the following or if the pressure does not stabilize, locate the suspect area and repair in accordance with Section 4.2.3.

- At the conclusion of all pressure tests, the end of the air-channel opposite the pressure gauge is cut. A decrease in gauge pressure must be observed or the air channel will be considered "blocked" and the test will have to be repeated from the point of blockage. If the point of blockage cannot be found, cut the air channel in the middle of the seam and treat each half as a separate test.

- Remove the pressure feed needle and seal resulting hole by extrusion welding.

TABLE 1

GEOSYNTHETIC RESEARCH INSTITUTE			
GRI TEST METHOD GM-6			
Air Pressure Inflation Schedule for HDPE and Coextruded Polyethylene Geomembranes (Smooth & Textured)			
Geomembrane Thickness (mil)	*Minimum Pressure lbs. / sq in.*	*Maximum Pressure lbs. / sq in.*	*Max Pressure Drop over 5 minutes lbs. / sq in.*
40	24	30	4
60	27	30	3
80	30	35	2
100	30	35	2
Air Pressure Inflation Schedule for VLDPE & LLDPE, PVC, PP and other Nonreinforced Geomembranes (Smooth & Textured)			
Geomembrane Thickness (mil)	*Minimum Pressure lbs. / sq in.*	*Maximum Pressure lbs. / sq in.*	*Max Pressure Drop over 5 minutes lbs. / sq in.*
20	10	20	5
30	15	25	5
40	20	30	4
50	25	35	4
60	25	35	3

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

3 - *Procedure for Non-Complying Test* - In the event of a Non-Complying Air Pressure Test, the following procedure shall be followed:

- Check seam end seals and retest seams.
- If a seam will not maintain the specified pressure, the seam should be visually inspected to localize the flaw. If this method is unsuccessful cut one inch (1") samples from each end of the seam.
- Perform destructive peel tests on the samples using the field tensiometer.
- If all samples pass destructive testing remove the overlap left by the wedge welder and vacuum test the entire length of seam in accordance with Paragraph 4.3.
- If a leak is located by the vacuum test, repair by extrusion fillet welding. Test the repair by vacuum testing.
- If no leak is discovered by vacuum testing, the seam will be considered to have passed non-destructive testing.
- If one or more peel specimens are in non-compliance, additional samples will be taken in accordance with Paragraph 4.4.3.
- When two (2) passing samples are located, the length of seam bounded by the two (2) passing test locations will be considered non-complying. The overlap left by the wedge welder will be heat tacked in place along the entire length of seam and the non-complying portion of seam will be extrusion fillet welded.
- Test the entire length of the repaired seam by vacuum testing in accordance with Paragraph 4.3.

5 - *Air Pressure Testing Documentation* All information regarding air-pressure testing, (date, initial time and pressure, final time and pressure, pass / fail designation, and Technicians ID will be written on one end of the seam, or portion of seam tested. All of the above information be logged on the NEW ENGLAND LINER SYSTEMS Non-Destructive Testing Form as exhibited in Appendix A.

4.3 - Vacuum Testing

This test is used on extrusion welds, or when the geometry of a fusion weld makes air pressure testing impossible or impractical, or when attempting to locate the precise location of a defect believed to exist after air pressure testing. The vacuum box testing procedures detailed herein are in accordance with ***EPA Technical Guidance Document EPA/600/R-93/182***, entitled ***Quality Assurance and Quality Control for Waste Containment Facilities***.

1 - *Equipment for Vacuum Testing*

- A self contained vacuum box unit specifically designed for the testing of geomembranes, with vacuum motor and vacuum gauge. In lieu of a self contained vacuum box unit the following component parts may also be used.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

- Vacuum box assembly consisting of a rigid housing with a soft neoprene gasket attached to the open bottom, a transparent viewing window, port hole or valve assembly, and a vacuum gauge.
- Vacuum pump or Venturi assembly equipped with a pressure controller and pipe connection.
- A rubber pressure / vacuum hose with fittings and connections.
- A bucket and means to apply a soapy solution.
- A soapy solution.

2 - *Procedure for Vacuum Testing*

- Trim excess overlap from the seam, if any.
- Apply a generous amount of a strong solution of liquid detergent and water to the area to be tested.
- Place the vacuum box over the area to be tested and apply sufficient downward pressure to "seat" the seal strip against the liner.
- Turn on the vacuum pump / compressor to reduce the pressure within the vacuum box to approximately 6 in / Hg *(inches of mercury*), or - 3 lbs / in ^{2}.
- Ensure that a leak tight seal is created.
- For a period of approximately 10 seconds, examine the geomembrane through the viewing window for the presence of soap bubbles.
- After this period close the vacuum valve and open the bleed valve, move the box over the next adjoining area with a minimum three inch (3") overlap, and repeat the process.

3 - *Procedure for Non-Complying Test*

- Mark all areas where soap bubbles appear and repair the marked areas in accordance with Paragraph 5.3.
- Retest repaired areas.

4 - *General Vacuum Testing Procedures*

Vacuum box testing will be performed by qualified construction personnel.

- Overlap must be trimmed prior to vacuum boxing all seams.
- Special attention shall be exercised when vacuum testing "T" seams or patch intersections with seams.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

5 - *Vacuum Testing Documentation*

- Vacuum testing crew will use Mean Streak permanent markers to write on liner indicating tester's ID number, date, and pass/fail designation on all areas tested.

- Records of vacuum testing will be maintained by the CQC Coordinator or testing crew on NEW ENGLAND LINER SYSTEMS Non-Destructive Testing Form or NEW ENGLAND LINER SYSTEMS Repair Report Form.

4.4 - Destructive Testing

1 – *Concept* - The purpose of destructive testing is to determine and evaluate seam strength. These tests require direct sampling and thus subsequent patching. Therefore, destructive testing should be held to a minimum to reduce the amount of repairs to the geomembrane.

2 - *Procedure for Destructive Testing*

- Destructive test samples shall be marked and cut out randomly at a minimum average frequency of one (1) test location per 500 feet of seam length, unless otherwise specified or agreed.

- Location of destructive samples will be selected by CQC Coordinator *(or the third party QA Representative)*, with samples cut by NEW ENGLAND LINER SYSTEMS Construction or CQC Personnel.

- Destructive samples should be taken and tested as soon as possible after the seams are welded (the same day), in order to receive test results in a timely manner.

- Qualified NEW ENGLAND LINER SYSTEMS personnel will observe all field destructive testing and record date, time, seam number, location, and test results on NEW ENGLAND LINER SYSTEMS Destructive Testing Form as contained in Appendix A.

- All destructive test locations with pass / fail designation will be marked on liner with permanent Mean Streak markers.

- The sample should be twelve inches (12″) wide with a seam sixteen inches (16″) long centered length-wise in the sample. The sample may be increased in size to accommodate independent laboratory testing by the Owner at the Owner's request or by site specific project specifications.

- A one-inch (1″) specimen shall be cut from each end of the test seam for field testing. The two (2) one inch (1″) wide specimens shall be tested on a field tensiometer for peel strength. If either field specimen does not pass, it will be assumed the sample would also not pass laboratory destructive testing.

- The procedure outlined in Paragraph 4.4.3 shall be followed to locate passing samples to send to the laboratory.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

3 - *Procedure for Non-Complying Destructive Test*

- Cut additional field samples for peel testing. In the case of a field production seam, the samples must lie a minimum of ten (10') feet in each direction from the location of the initial non-complying sample. Perform a field test for peel strength. If these field samples pass, then laboratory samples can be cut and forwarded to the laboratory for full testing.

- If the laboratory samples pass, then repair the seam between the two (2) passing sample locations according to procedures detailed in Section 5.3.

- If either of the samples are still in non-compliance, then additional samples are taken in accordance with the above procedure until two (2) passing samples are found to establish the zone in which the seam should be reconstructed.

- All passing seams must be bounded by two (2) locations from which samples passing laboratory destructive tests have been taken.

- In cases of repaired seams exceeding 150 consecutive feet, a sample must be taken and pass destructive testing from within the zone in which the seam has been reconstructed. Each destructive must be considered a seam.

- All destructive seam samples shall be numbered and recorded on New England Liner Systems International's Destructive Test Form as exhibited in Appendix A.

4.5 - Laboratory Testing of Destructive Seam Samples

1 - *Destructive Seam Testing* Laboratory Seam destructive samples may be sent to an independent third party laboratory or tested on site when permitted by a site specific quality control plan or in the event that third party laboratory destructive testing is not being performed.

2 - *Acceptance Criteria* Destructive samples will be tested for "shear strength" and Peel Adhesion" (ASTM D4437 as modified by NSF). Five (5) specimens shall be tested for each test method. Four (4) out of the five (5) specimens must exhibit FTB (as defined by NSF Standard Number 54-1993) for each round of peel and shear testing. In addition, four (4) of the five (5) individual specimens and the average of the five (5) peel and shear tests must meet or exceed the strength requirements as listed in the manufacturers material specification sheet in order for the seam to pass the destructive test.

5. - DEFECTS AND REPAIRS

1 - *Superintendent's Review* - New England Liner Systems International's CQC Coordinator and/or Project Superintendent shall conduct a detailed walk through and visually check all seams and non-seam areas of the geomembrane for defects, holes, blisters, and signs of damage during installation.

2 - Technician's Responsibility - All other New England Liner Systems installation personnel shall, at all times, be on the lookout for any damaged areas. Damaged areas shall be marked and repaired.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

3 - *Repair Procedures* - Any portion of the geomembrane or geomembrane seam showing a flaw, or having a destructive or non-destructive test in non-compliance shall be repaired. Several procedures exist for repair and the decision as to the appropriate repair procedure shall be made by New England Liner Systems' Project Superintendent.

Procedures available for repair include the following:

- Patching Used to repair large holes, tears, and destructive sample locations. All patches shall extend at least three inches (3") beyond the edges of the defect and all corners of patches shall be rounded.
- Grinding and Welding Used to repair sections of extruded fillet seams.
- Spot Welding or Seaming Used to repair small tears, pinholes, or other minor localized flaws.
- Capping Used to repair lengths of extrusion or fusion welded seams.
- Extrude Overlap Runs along the length of fusion welded seams.

4 - *Verification of Repairs* - Every repair shall be non-destructively tested. Repairs which pass the non-destructive test shall be deemed acceptable. Non-destructive testing of repair shall be logged on a New England Liner Systems' Repair Report Form.

6. - GEOTEXTILES

1 - *Handling and Placement* - All geotextiles shall be handled in a manner to ensure they are not damaged. The following special handling requirements shall be adhered to:

- On slopes, the geotextiles shall be secured in the anchor trench and then rolled down the slope when practical. In any event it should be deployed in such a manner as to continually keep the geotextile sheet in sufficient tension to reduce folds and wrinkles.
- In presence of wind, all geotextiles shall be weighted with sandbags or the equivalent.
- Care shall be taken not to entrap stones or excessive dirt that could damage the geomembrane, or generate clogging of drains or filters.

2 - *Seams and Overlaps* - Geotextiles may be seamed by thermal bonding or by sewing.

- On slopes steeper than ten (10) horizontal to one (1) vertical, it is recommended that geotextiles be continuously sewn along the entire length of the seam.
- Geotextiles shall be overlapped a minimum of four (4") inches prior to sewing.
- On Cell Floors and slopes shallower than ten (10) horizontal to one (1) vertical, geotextiles can be either sewn as indicated above or thermally bonded.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

- If thermally bonded the geotextile shall be overlapped a minimum of four inches (4") prior to seaming.

3 – *Repairs* - Any holes or tears in the geotextile shall be repaired as follows:

- On Slopes - A patch made from the same geotextile shall be seamed into place.

- Horizontal Areas - A patch made from the same geotextile shall be spot-seamed in place with a minimum of twelve inches (12") overlap in all directions.

7. GEONETS

1 - *Handling and Placement* - The geonets shall be handled in such a manner as to ensure the geonets are not damaged in any way.

- On slopes, the geonets shall be secured in the anchor trench and then rolled down the slope in such a manner as to continually keep the geonet sheet in tension.

- If necessary, the geonet shall be positioned by hand after being unrolled to minimize wrinkles. Geonets can be placed in the horizontal direction (i.e., across the slope) in some special locations *(across slopes and special locations where extra layers are required or where slope is less than 10:1)*.

- Geonets shall not be welded to geomembranes. Geonets shall be cut using approved cutters, i.e. , hook blade, scissors, etc. Care should be taken to prevent damage to underlying layers.

- Care must be taken not to entrap dirt in the geonet that could cause clogging of the drainage system, and/or stones that could damage the adjacent geomembrane.

2 - *Layering and Tying of Geonet* - When several layers of geonets are installed, care should be taken to prevent the strands of one layer from penetrating the channels of the next layer.

Adjacent geonets shall be joined according to the following requirements.

- Adjacent rolls shall be overlapped by at least four inches (4") and securely tied.

- Tying can be achieved by plastic fasteners. Tying devices shall be white or yellow for easy inspection. Metallic devices are not allowed.

- Tying shall be five (5') to ten (10') along the bottom, every five (5') along the slope every two feet (2') across the slope and at top of berm and into anchor trench at least with one (1') foot intervals.

- When more than one layer of geonet is installed, overlaps must be staggered.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

3 – *Repairs* - Any holes or tears in the geonet shall be repaired by placing a patch extending two feet (2') beyond edges of the hole or tear. The patch shall be secured to the original geonet by tying every twelve inches (12"). If the hole or tear width across the roll is more than 50% the width of the roll, the damaged area shall be cut out and the two (2) portions of the geonet shall be joined.

8. GEOSYNTHETIC CLAY LINERS

1 *Definition* - Geosynthetic Clay Liner (GCL). A manufactured hydraulic barrier consisting of clay bonded to a layer or layers of geosynthetics. The GCL may be reinforced or unreinforced as required by site conditions.

2 *Storage* **-** A dedicated storage area shall be selected at the job site that is away from high traffic areas and is level, dry and well-drained.

Rolls should be stored in a manner that prevents sliding or rolling from the stacks and may be accomplished by the use of chock blocks or by use of the dunnage shipped between rolls. Rolls should be stacked at a height no higher than that at which the lifting apparatus can be safely handled (typically no higher than four).

All stored GCL materials and the accessory bentonite must be covered with a plastic sheet or tarpaulin until their installation.

The integrity and legibility of the labels should be preserved during storage.

3 *Earthwork* - Any earthen surface upon which the GCL is installed shall be prepared and compacted in accordance with the project specifications and drawings. The surface shall be smooth, firm, and unyielding, and free of:

- Vegetation.
- Construction Debris.
- Sticks.
- Sharp rocks.
- Void spaces.
- Ice.
- Abrupt elevation changes.
- Standing water.
- Cracks larger than one-quarter inch (6 mm) in width.
- Any other foreign matter that could contact the GCL.

Subgrade surfaces consisting of granular soils or gravel may not be acceptable due to their large void fraction and puncture potential. Subgrade soils should possess a particle size distribution such that at least 80 percent of the soil is finer than a #60 sieve (0.250 mm).

Immediately prior to GCL deployment, the subgrade shall be final-graded to fill in all voids or cracks and then smooth-rolled to provide the best practicable surface for the GCL. At completion of this activity, no wheel ruts, footprints or other irregularities shall exist in the subgrade. Furthermore, all protrusions extending more than one-half inch (12 mm) from the surface shall either be removed, crushed or pushed into the surface with a smooth-drum compactor.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

4 GCL Placement –

A. Unreinforced GCL shall be placed on the flatter areas of the site; reinforced GCL shall be placed on the more steeply sloped areas. The Installer and Project engineer shall review and agree upon which GCL shall be placed on these areas prior to installation.

B. GCL rolls should be delivered to the working area of the site in their original packaging. Immediately prior to deployment, the packaging should be carefully removed without damaging the GCL. The orientation of the GCL (i.e., which side faces up) should be in accordance with the Engineer's recommendations.

C. Equipment which could damage the GCL shall not be allowed to travel directly on it. If the installation equipment causes rutting of the subgrade, the subgrade must be restored to its originally accepted condition before placement continues.

D. Care must be taken to minimize the extent to which the GCL is dragged across the subgrade in order to avoid damage to the bottom surface of the GCL. A temporary geosynthetic subgrade covering commonly known as a slip sheet or rub sheet may be used to reduce friction damage during placement.

E. The GCL shall be placed so that seams are parallel to the direction of the slope.

F. All GCL panels should lie flat on the underlying surface, with no wrinkles or folds, especially at the exposed edges of the panels.

G. Only as much GCL shall be deployed as can be covered at the end of the working day with soil, a geomembrane, or a temporary waterproof tarpaulin.

5 *Seaming* -

A. The GCL seams are constructed by overlapping their adjacent edges. Care should be taken to ensure that the overlap zone is not contaminated with loose soil or other debris. Supplemental bentonite may be required for certain GCL products such as Bentomat® CL, Bentomat® DN and Bentomat® ST.

B. The minimum dimension of the longitudinal overlap should be 6 inches (150 mm). End-of-roll overlapped seams should be similarly constructed, but the minimum overlap should measure 24 inches (600 mm).

C. Seams at the ends of the panels should be constructed such that they are shingled in the direction of the grade to prevent the potential for runoff flow to enter the overlap zone.

D. Bentonite-enhanced seams are constructed between the overlapping adjacent panels described above. The underlying edge of the longitudinal overlap is exposed and then a continuous bead of granular sodium bentonite is applied along a zone defined by the edge of the underlying panel and the 6-inch (150 mm) line. A similar bead of granular sodium bentonite is applied at the end-of-roll overlap. The bentonite shall be applied at a minimum application rate of one quarter pound per lineal foot (0.4 kg/m).

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

6 *Detail Work* The GCL shall be sealed around penetrations and embedded structures embedded in accordance with the design drawings and the GCL Manufacturers installation guidelines.

7 *Damage Repair* If the GCL is damaged (torn, punctured, perforated, etc.) during installation, it may be possible to repair it by cutting a patch to fit over the damaged area. The patch shall be obtained from a new GCL roll and shall be cut to size such that a minimum overlap of 12 inches (300 mm) is achieved around all of the damaged area. Dry bentonite or bentonite mastic should be applied around the damaged area prior to placement of the patch. It may be desirable to use an adhesive to affix the patch in place so that it is not displaced during cover placement.

8 *Cover Placement*

A. Cover soils shall be free of angular stones or other foreign matter which could damage the GCL. Cover soils should be approved the project Engineer with respect to particle size, uniformity and chemical compatibility. Cover soils with high concentrations of calcium (e.g., limestone, dolomite) are not acceptable.

B. Soil cover shall be placed over the GCL using construction equipment that minimizes stresses on the GCL. A minimum thickness of 1 foot (300 mm) of cover should be maintained between the equipment tires/tracks and the GCL at all times during the covering process. This thickness recommendation does not apply to frequently trafficked areas or roadways, for which a minimum thickness of 2 feet (600 mm) is required.

C. Soil cover should be placed in a manner that prevents the soil from entering the GCL overlap zones. Cover soil shall be pushed up slopes, not down slopes, to minimize tensile forces on the GCL.

D. Although direct vehicular contact with the GCL is to be avoided, lightweight, low ground pressure vehicles (such as 4-wheel all-terrain vehicles) may be used to facilitate the installation of any geosynthetic material placed over the GCL. The GCL supplier or CQA engineer should be contacted with specific recommendations on the appropriate procedures in this situation.

E. When a textured geomembrane is installed over the GCL, a temporary geosynthetic covering known as a slip sheet or rub sheet should be used to minimize friction during placement and to allow the textured geomembrane to be more easily moved into its final position.

APPROVED - 03/01/2022

7300007943-QC-0001-001 - Fields Point Liquefaction Project - Received: 02/02/2022

9. – GEOCOMPOSITE

1 - *Handling and Placement* All Geocomposites shall be handled in a manner to ensure they are not damaged. The following special handling requirements shall be adhered to:

- On slopes, the geocomposites shall be secured in the anchor trench and then rolled down the slope when practical. In any event it should be deployed in such a manner as to continually keep the geocomposite sheet in sufficient tension to reduce folds and wrinkles.

- In the presence of high wind, all geocomposites shall be weighted with sandbags or the equivalent.

- Geocomposite shall be cut using an approved cutter, i.e. hook blade. If the material is being cut in place, special care must be taken to protect other geosynthetic materials from damage.

- Care shall be taken not to entrap stones or excessive dust that could damage the geomembrane, or generate clogging of drains or filters.

2 - *Seams and Overlaps* Geocomposites may be seamed by thermal bonding or by sewing.

- On slopes steeper than then (10) horizontal to one (1) vertical, it is recommended that geocomposites be continuously sewn. The geotextile must be overlapped by at least three (3) inches, the geonet overlap by approx. four (4) inches.

- On slopes shallower than ten (10) horizontal to one (1) vertical, geocomposites can be either sewn as indicated above or thermally bonded.

- Tying of the geonet will be with plastic fasteners. Tying devices shall be white or yellow for easy inspection. Metallic devices are not allowed.

- Tying shall be every five (5') to ten (10') feet across the bottom, every five (5') feet along the slope, at the top of the berm and into anchor trench at least with one (1') intervals. End to end joints on the bottom will be overlapped two (2') with no tying.

3 – *Repairs* The repair will be observed and if smaller than three (3') by three (3') the geocomposite will be repaired. If the tear or hole is larger, then the roll will be cut and a butt joint placed.

- If the geonet is undamaged, and the geotextile is damaged, a patch of geotextile shall be placed. The geotextile patch shall be thermally bonded in place with a minimum of twelve (12") inches overlap in all directions.

- If the geonet is damaged, the damaged geonet shall be removed. A section of geonet shall be cut to replace the removed section. The geonet shall be tied to the existing geonet using plastic fasteners placed at least every six (6") overlap. A geotextile patch shall be placed over the repaired geonet section. The geotextile patch shall be thermally bonded in place with a minimum of twelve (12") inch overlap in all directions.

Nathan Ivy - Corporate Quality Control/Technical Manager
Agru America, Inc.
800 Rockmead #122
Kingwood, TX 77339
281-358-4741

Dear Mr. Ivy:

Please recall your request for testing of oven-exposed and UV-exposed geomembrane samples produced primarily from Marlex® 7104 LLDPE and Marlex® K307 HDPE. Agru blended other components with each of these polyethylenes to produce the geomembrane samples for testing. Smooth geomembrane samples have been received from Agru and test results are reported below. The samples were tested for HP-OIT in their as-received condition, and were also tested after oven and UV exposures of 90 days and 1600 hours of irradiance, respectively, in accordance with GRI-GM13 and GRI-GM17.
The following geomembrane sheet samples were received from Agru in mid-June 2017 and were reported to be primarily composed of each of the Chevron Phillips Chemical Company grades in the description below:

- K307 Lot #HHB620720, Agru Roll #G17D000534, black sheet, smooth, nominal 0.040" thick.
- 7104 Lot #CFJ810540, Agru Roll #G15B434055, black sheet, smooth, nominal 0.040" thick.

Exposure and testing conditions, along with the test results are tabulated on the next page. GM-13 and GM-17 require minimum % HP-OIT retention after a 90-day oven exposure and after a 1600 hour UV irradiance exposure. These test results indicate these GM-13 and GM-17 minimum % HP-OIT retentions were exceeded by these Agru-supplied K307 and 7104 sheet samples, respectively.

If you have any questions, please feel free to contact me (contact information given above).

Sincerely,

Vergil Rhodes
Polyethylene Technical Service and Applications Development, Geomembrane

APPROVED - 03/01/2022

The following oven aging and UV exposure test methods were conducted in accordance with the GRI-GM13 (HDPE) and GRI-GM17 (LLDPE) requirements:

Test Name	**Exposure Conditions**	**Test Method**
Oven Aging	90 days in an oven at 85 °C	ASTM D5721
UV Exposure	1600 UV irradiance hours. Cycle: 20 hours UVA-340 at 75 °C followed by 4 hours dark with condensation at 60 °C. Irradiance was 0.78 W/m^2 at wavelength 340 nm. Note: This implies a total UV chamber residence time of 1920 hours, e.g., 1600 hours of irradiance and 320 hours of dark/condensation.	ASTM D7238
HP-OIT	150 °C in an oxygen atmosphere at 500 psi	ASTM D5885

Oven Aging Results:

Sample	Initial HP-OIT (min)	HP-OIT after 90 days of oven aging. (min)	% HP-OIT Retained after 90 days of oven aging.	GRI-GM13 and GRI-GM17 minimum % HP-OIT retained after 90 days of oven aging.
K307 Lot #HHB620720, Agru Roll #G17D000534, black sheet, smooth, nominal 0.040" thick	1264	1123	89	GRI-GM13: 80 minimum
7104 Lot #CFJ810540, Agru Roll #G15B434055, black sheet, smooth, nominal 0.040" thick	550	508	92	GRI-GM17: 60 minimum

UV Aging Results:

Sample	Initial HP-OIT (min)	HP-OIT after 1600 hrs of UV exposure. (min)	% HP-OIT Retained after 1600 hrs of UV exposure.	GRI-GM13 and GRI-GM17 minimum % HP-OIT retained after 1600 hrs of UV exposure.
K307 Lot #HHB620720, Agru Roll #G17D000534, black sheet, smooth, nominal 0.040" thick	1264	1024	81	GRI-GM13: 50 minimum
7104 Lot #CFJ810540, Agru Roll #G15B434055, black sheet, smooth, nominal 0.040" thick	550	470	85	GRI-GM17: 35 minimum

Note: 1600 hours of UV exposure in accordance with ASTM D7238 implies a total UV chamber residence time of 1920 hours, e.g., 1600 hours of irradiance and 320 hours of darkness with condensation.

APPROVED - 03/01/2022

Dear Mr. Ivy:

Thank you for consulting TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs.
TRI is pleased to submit this final report of the laboratory testing for the sample(s) listed below.

Project: **Trial 16-006**

TRI Job Reference Number: 24280

Material(s) Tested: One, Agru 40 mil Smooth LLDPE Geomembrane

Test(s) Requested: 2% Secant Modulus (ASTM D 5323)
Multi-axial Tensile (ASTM D 5617)
Data Updated==> UV Resistance (ASTM D 7238)
Data Updated==> Oven Aging (ASTM D5721)

If you have any questions or require any additional information, please call us at 1-800-880-8378

Sincerely,

Mansukh Patel
Laboratory Manager
Geosynthetic Services Division

TRI Client: Agru America
Project: Trial 16-006

Material: Agru 40 mil Smooth LLDPE Geomembrane
Sample Identification: G16D002549 , , Formasa L91507H
TRI Log #: 24280

PARAMETER	TEST REPLICATE NUMBER										MEAN	STD. DEV.
	1	2	3	4	5	6	7	8	9	10		
UV Resistance (ASTM D 7238)												
The resistance to degradation due to exposure to ultraviolet light and moisture was determined in accordance with GRI-GM11, Accelerated Weathering of Geomembranes Using a Fluorescent UVA Device. This standard covers the basic principles for using the QUV apparatus to accelerate the weathering of geomembranes using UVA bulbs and condensation. To comply with Specification GRI GM13, the sample was exposed to 1600 hours of UV exposure composed of 80 cycles of UA at 75 C for 20 hours followed by condensation at 60 C for 4 hours. The High Pressure Oxidative Induction Time (HPOIT) was evaluated before and after the exposure and results were as follows.												
												PERCENT RETAINED
HPOIT (minutes) - Baseline	574										**574**	
HPOIT (minutes) - After QUV Aging	418										**418**	73
Note: No surface cracking was observed.												
Oven Aging (ASTM D 5721)												
The geomembrane was exposed to 90 days of elevated temperature exposure in an air oven maintained at 85°C ± 0.5°C in accordance with ASTM D 5721-95, Standard Practice for Air-Oven Aging of Polyolefin Geomembranes. High Pressure Oxidative Induction Time (HPOIT) was tested after exposure and compared to values generated for unexposed material. The results are provided below.												
												PERCENT RETAINED
HPOIT (minutes) - Baseline	574										**574**	
HPOIT (minutes) - After Oven Aging	561										**561**	98
Note: No surface cracking was observed.												

The testing herein is based upon accepted industry practice as well as the test method listed. Test results reported herein do not apply to samples other than those tested. Dear Mr. Palmer:

Thank you for consulting TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs.
TRI is pleased to submit this final report of the laboratory testing for the sample(s) listed below.

TRI Job Reference Number:	E2386-67-07
Material(s) Tested:	One Agru 60 mil. Microspike LLDPE Geomembrane
Test(s) Requested:	2% Secant (ASTM D5323 via ASTM D638, GM17) Multi-axial Tensile (ASTM D 5617)

If you have any questions or require any additional information, please call us at 1-800-880-8378

Sincerely,

Mansukh Patel
Laboratory Manager
Geosynthetic Services Division

Client:	New England Liner Systems		
Project:	Fields Point Sand Filter		
Project Location:	---		
GTX Project No.:	315142	Tested By:	dln
Test Date:	3/9/2022	Checked By:	bfs
Sample ID:	Roll #GTC007178003		
Description:	Black, 60 mil Agru microspike geomembrane		

Water Absorption of Plastics by ASTM D570

Conditioning Time:	24 hours	Immmersion Time:	24 hours
Conditioning Temperature:	50 ±3°C	Immersion Temperature:	23 ±1°C
Specimen Size:	1 inch x 3 inch	Immersion Fluid:	Distilled Water

Specimen Number	Dimensions			Weights, g		Increase in Weight, %	Soluble Matter Lost, %	Water Absorbed, %
	Length, in.	Width, in.	Thickness, mil	Pre-Immersion	Post-Immersion			
1	3.015	1.002	62.4	3.071	3.072	0.03	0	0.03
2	3.011	1.024	59.9	2.821	2.822	0.02	0	0.02
3	3.031	1.020	62.5	3.135	3.136	0.01	0	0.01
Average	3.019	1.015	61.6	3.009	3.010	0.02	0	0.02

Comments: - Specimens are condtitioned in an oven at 50 ±3°C for 24 hours prior to immersion.

- At the end of the 24 immersion, specimens are removed one at time, wiped with a dry cloth, and weighed immediately.

Notes: These results apply only to the sample tested for the specific test conditions. The test procedures employed follow accepted industry practice and the indicated test method. GeoTesting Express has no specific knowledge as to conditioning, origin, sampling procedure or intended use of the material.

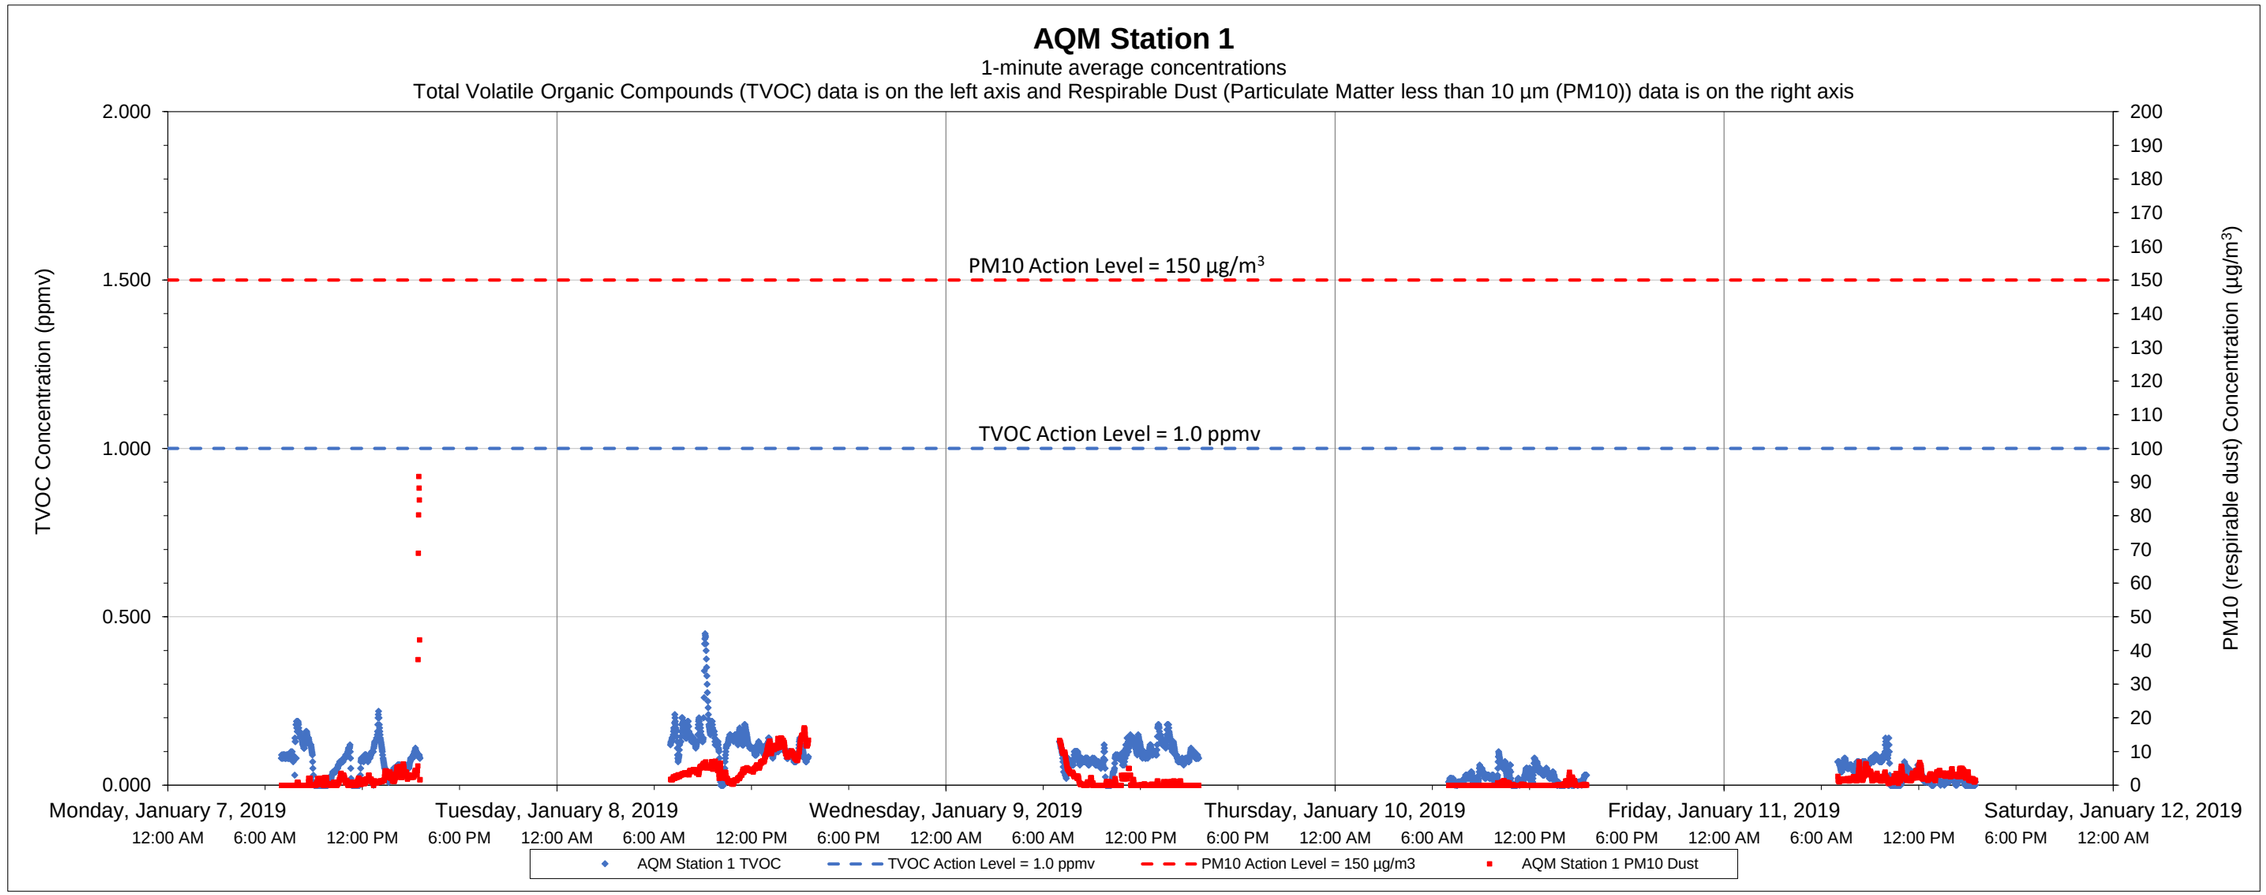
APPENDIX J

PERIMETER AIR MONITORING

Prepared by National Grid LNG LLC
Liquefaction Facility Project -
STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
1/14/2019



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

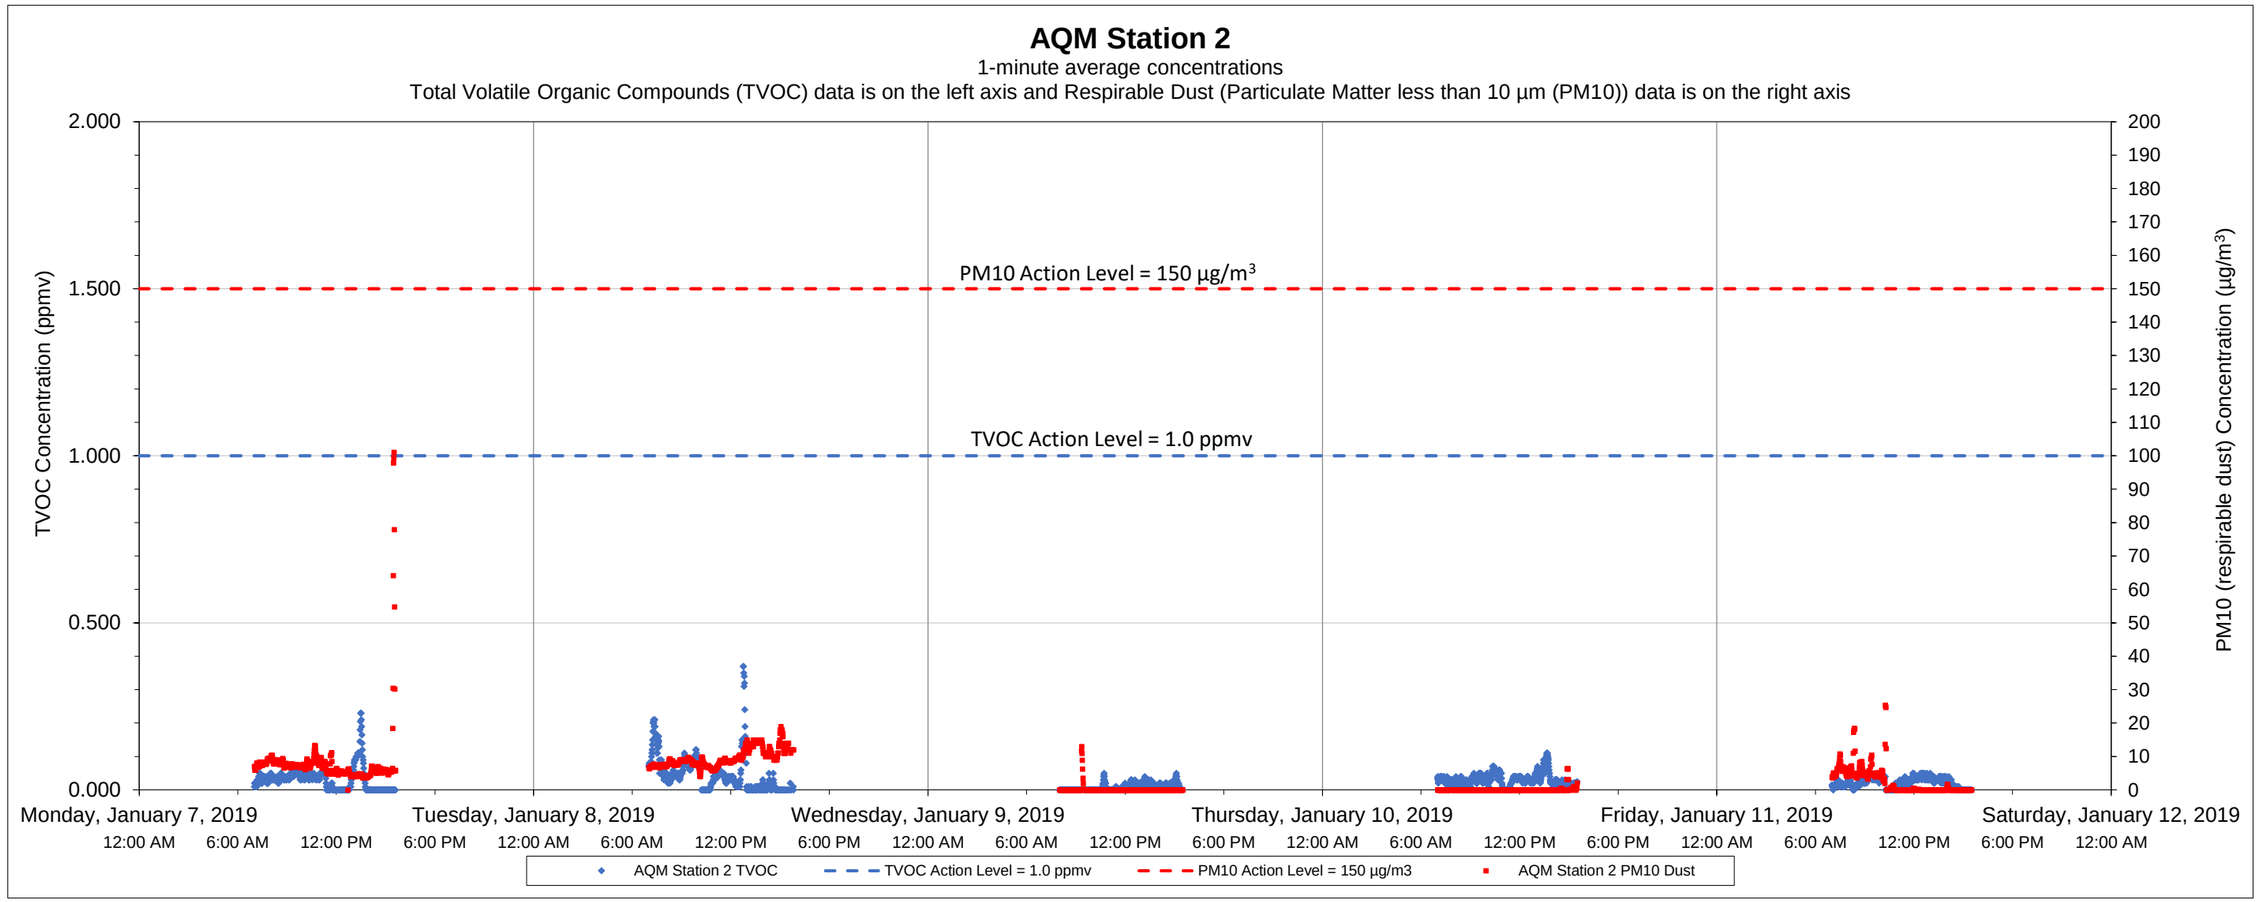
Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.07	ppm
TVOCs maximum concentration	0.45	ppm
TVOCs action level	1	ppm
PM10 average concentration	2.53	µg/m^3
PM10 maximum concentration	91.71	µg/m^3
PM10 action level	150	µg/m^3

Notes:
1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.
2) The location of each AQM Station is presented on the attached summary figure.
3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

Prepared by National Grid LNG LLC
Liquefaction Facility Project -
STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
1/14/2019



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Data Summary Statistics		
TVOCs average concentration	0.03	ppm
TVOCs maximum concentration	0.37	ppm
TVOCs action level	1	ppm
PM10 average concentration	4.07	µg/m^3
PM10 maximum concentration	101.08	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
1/9/2019 - Power outage noted at 7:00AM. Power restored at 8:09AM. No soil disturbance work of any kind was occurring during this time frame.

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

PM10 maximum concentration	186.29	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
1/24/2019 - Precipitation events caused transient action level exceedance at 14:11. Equipment temporarily removed from service and calibrated. No soil disturbance work of any kind was occurring during this time frame.

Notes:
1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.
2) The location of each AQM Station is presented on the attached summary figure.
3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

Liquefaction Facility Project -
STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
4/12/2019

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.03	ppm
TVOCs maximum concentration	0.26	ppm
TVOCs action level	1	ppm
PM10 average concentration	9.19	µg/m^3
PM10 maximum concentration	58.81	µg/m^3
PM10 action level	150	µg/m^3

Notes:
1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.
2) The location of each AQM Station is presented on the attached summary figure.
3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
6/24/2019

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Data Summary Statistics		
TVOCs average concentration	0.15	ppm
TVOCs maximum concentration	0.70	ppm
TVOCs action level	1	ppm
PM10 average concentration	16.73	µg/m^3
PM10 maximum concentration	64	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
None

Notes:

1) Transient readings were conducted over a three minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM location is presented on the attached summary figure. This graph depicts data collected by the roving unit.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

9/6/2019

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Data Summary Statistics		
TVOCs average concentration	0.05	ppm
TVOCs maximum concentration	0.97	ppm
TVOCs action level	1	ppm
PM10 average concentration	7.56	µg/m^3
PM10 maximum concentration	23.87	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
None

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

Prepared by GZA on behalf of National Grid LNG LLC
Liquefaction Facility Project -

Liquefaction Facility Project -
STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
12/27/2019

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Data Summary Statistics		
TVOCs average concentration	0.08	ppm
TVOCs maximum concentration	0.72	ppm
TVOCs action level	1	ppm
PM10 average concentration	19.42	µg/m^3
PM10 maximum concentration	66.16	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
None

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

GZA Job No. 03.0033554.04
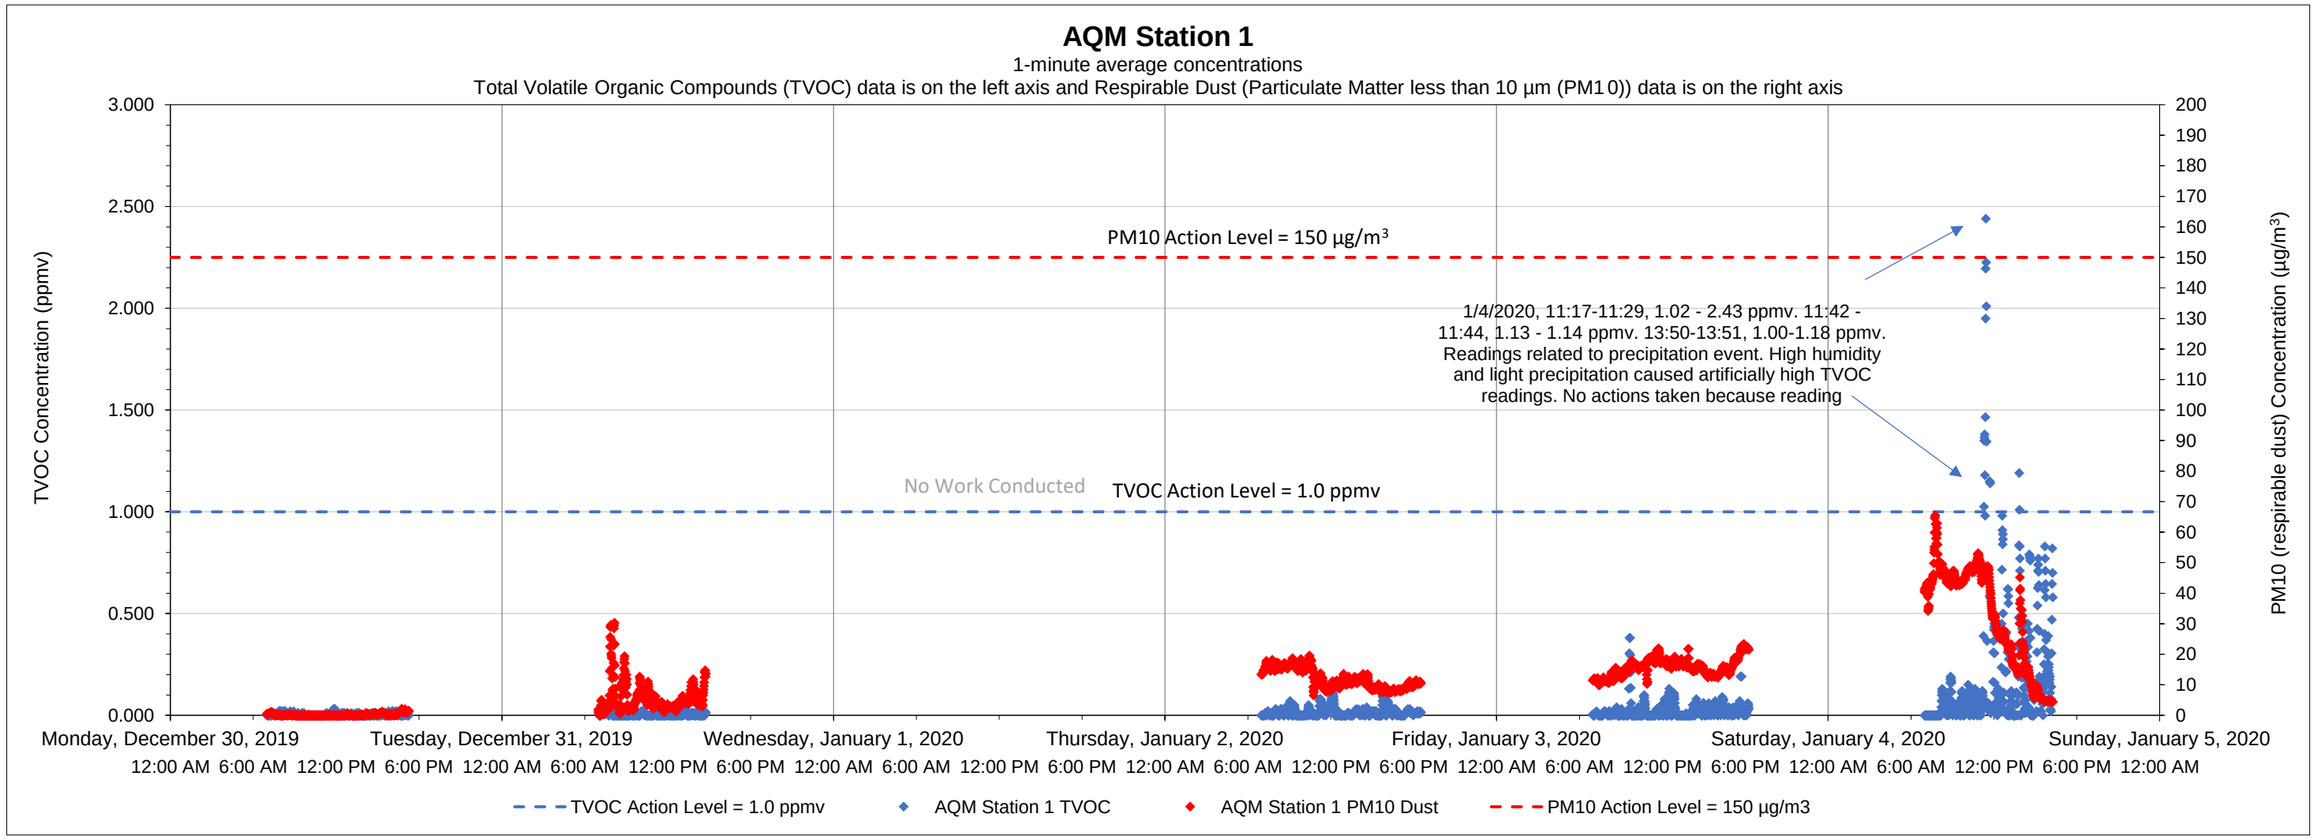
1/6/2020



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
1/4/2020	11:17	TVOCs	1.02-2.44	No actions taken, readings were not attributed to ongoing site work.

Data Summary Statistics		
TVOCs average concentration	0.04	ppm
TVOCs maximum concentration	2.44	ppm
TVOCs action level	1	ppm
PM10 average concentration	13.15	µg/m^3
PM10 maximum concentration	65.55	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
1/4/2020 - Precipitation events caused sustained action level exceedances. Equipment temporarily removed from service and calibrated. A handheld PID was utilized to confirm that the station's readings were innacurate, and the site was checked for odors. Readings can be attributed to moisture from high humidity and precipitation entering the equipment box. Further troubleshooting planned for Monday 1/6/2020.

Notes:
1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.
2) The location of each AQM Station is presented on the attached summary figure.
3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Liquefaction Facility Project -
STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
2/3/2019

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.01	ppm
TVOCs maximum concentration	0.60	ppm
TVOCs action level	1	ppm
PM10 average concentration	21.73	µg/m³
PM10 maximum concentration	54.00	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a three minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM location is presented on the attached summary figure. This graph depicts data collected by the roving unit.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

05/11/2020

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.01	ppm
TVOCs maximum concentration	0.19	ppm
TVOCs action level	1	ppm
PM10 average concentration	5.91	µg/m^3
PM10 maximum concentration	23.82	µg/m^3
PM10 action level	150	µg/m^3

Notes:
1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.
2) The location of each AQM Station is presented on the attached summary figure.
3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

Prepared by GZA on behalf of National Grid LNG LLC
Liquefaction Facility Project -
STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

Prepared by GZA on behalf of National Grid LNG LLC
Liquefaction Facility Project -
STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
06/29/2020

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.02	ppm
TVOCs maximum concentration	0.88	ppm
TVOCs action level	1	ppm
PM10 average concentration	24.62	µg/m^3
PM10 maximum concentration	168.00	µg/m^3
PM10 action level	150	µg/m^3

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.
2) The location of each AQM Station is presented on the attached summary figure.
3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

STRAP Perimeter Air Quality Monitoring (AQM)
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

GZA Job No. 03.0033554.04
07/20/2020

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Data Summary Statistics		
TVOCs average concentration	0.06	ppm
TVOCs maximum concentration	0.25	ppm
TVOCs action level	1	ppm
PM10 average concentration	10.80	µg/m^3
PM10 maximum concentration	46.60	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
AQM Station 1 was relocated approximately 75 feet southwest of its original location to improve radio communication performance.
The radio communication performance did not impact data collection or reporting.

Notes:
1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.
2) The location of each AQM Station is presented on the attached summary figure.
3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.06	ppm
TVOCs maximum concentration	1.53	ppm
TVOCs action level	1	ppm
PM10 average concentration	8.20	µg/m³
PM10 maximum concentration	47.00	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

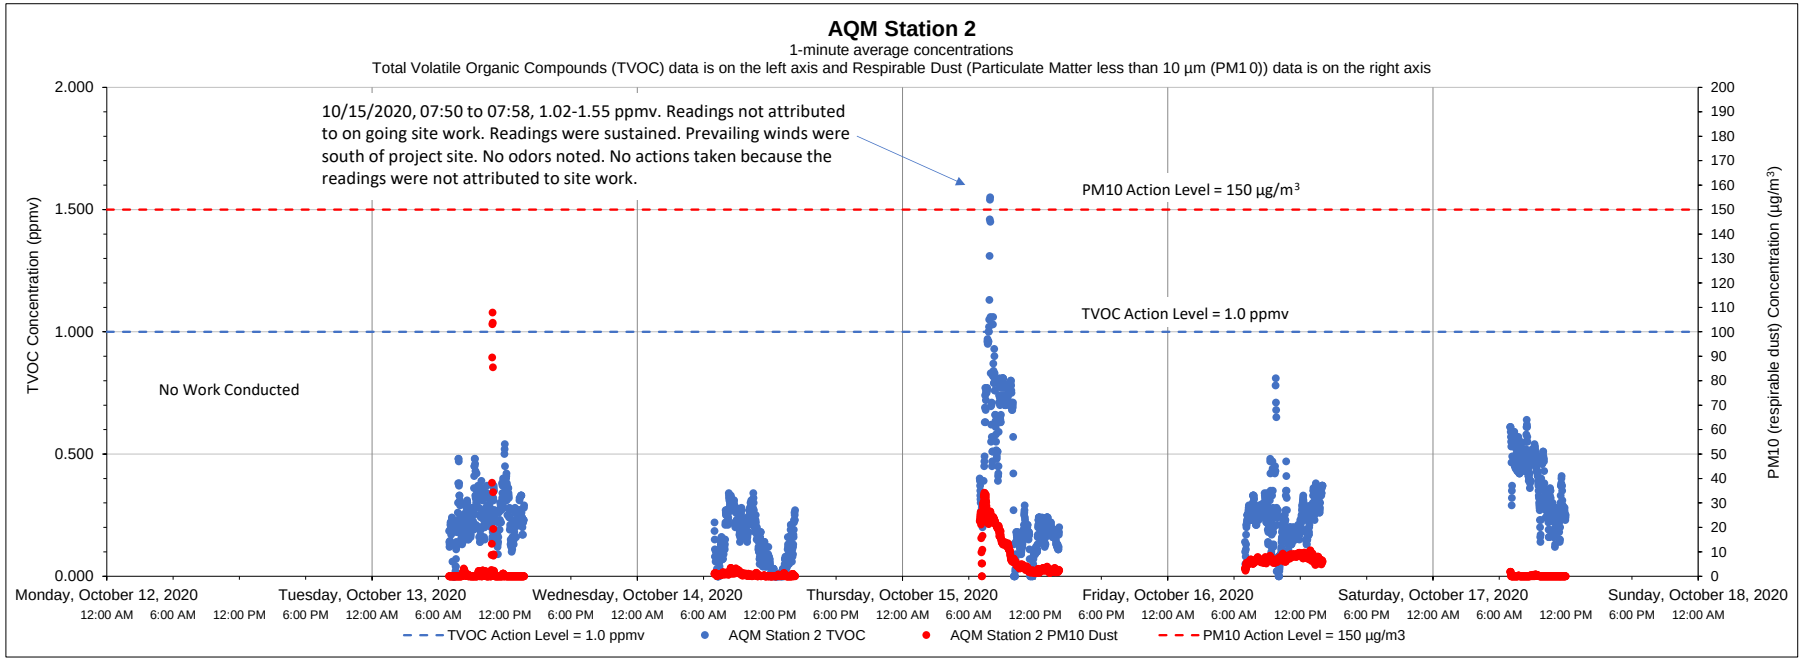
Liquefaction Facility Project -

STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
10/28/2020	11:11 to 13:12	TVOC	1.11-3.02 ppmv	No actions taken because readings were not attributed to site work

Data Summary Statistics		
TVOCs average concentration	0.41	ppm
TVOCs maximum concentration	3.02	ppm
TVOCs action level	1	ppm
PM10 average concentration	5.71	µg/m³
PM10 maximum concentration	57.68	µg/m³
PM10 action level	150	µg/m³

Equipment Notes
10/28/2020 - Equipment error caused sustained action level exceedances. A handheld PID was utilized to confirm that the station's readings were inaccurate,
and the site was checked for odors. Equipment temporarily removed from service, recalibrated and replaced.

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Liquefaction Facility Project -

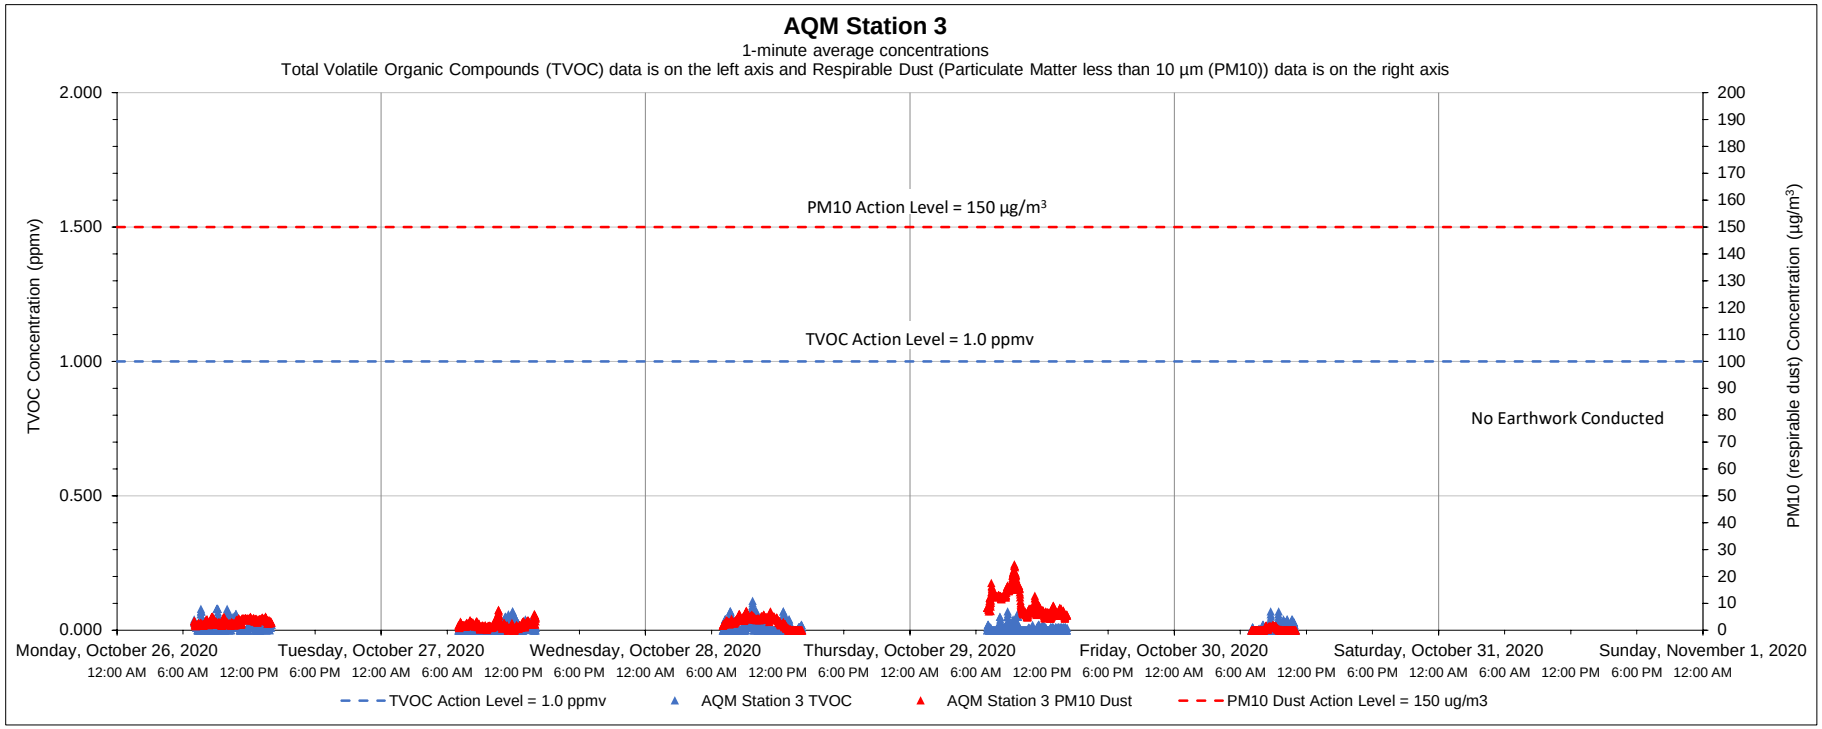
STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.02	ppm
TVOCs maximum concentration	0.26	ppm
TVOCs action level	1	ppm
PM10 average concentration	40.81	µg/m³
PM10 maximum concentration	124.55	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

GZA Job No. 03.0033554.04
3/21/2020

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
3/19/2020	09:06-09:12	TVOC	1.17-2.55 ppmv	No actions taken. Readings not attributed to ongoing site work.

Data Summary Statistics		
TVOCs average concentration	0.09	ppm
TVOCs maximum concentration	2.55	ppm
TVOCs action level	1	ppm
PM10 average concentration	11.48	µg/m^3
PM10 maximum concentration	50.97	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
3/19/2020 - Equipment error caused sustained action level exceedances. A handheld PID was utilized to confirm that the station's readings were innacurate, and the
site was checked for odors. Equipment temporarily removed from service and recalibrated.

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				
Equipment Notes				
None				

Data Summary Statistics		
TVOCs average concentration	0.18	ppm
TVOCs maximum concentration	0.39	ppm
TVOCs action level	1	ppm
PM10 average concentration	6.92	µg/m³
PM10 maximum concentration	20.42	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

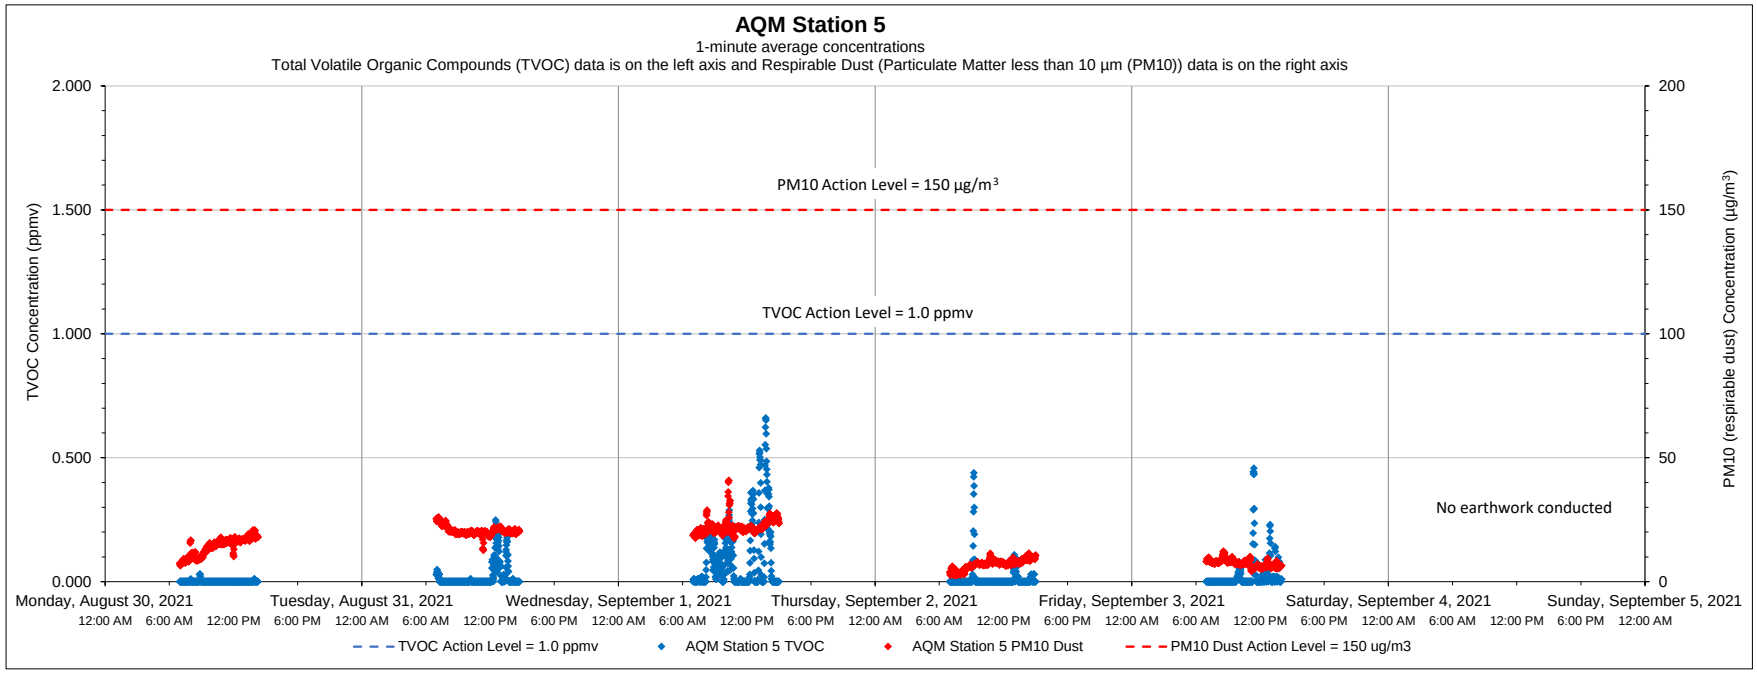
STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				
Equipment Notes				
None				

Data Summary Statistics		
TVOCs average concentration	0.05	ppm
TVOCs maximum concentration	0.98	ppm
TVOCs action level	1	ppm
PM10 average concentration	3.07	µg/m³
PM10 maximum concentration	14.83	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				

Equipment Notes
None

Data Summary Statistics		
TVOCs average concentration	0.02	ppm
TVOCs maximum concentration	0.48	ppm
TVOCs action level	1	ppm
PM10 average concentration	14.53	µg/m³
PM10 maximum concentration	45.72	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

7/06/2021

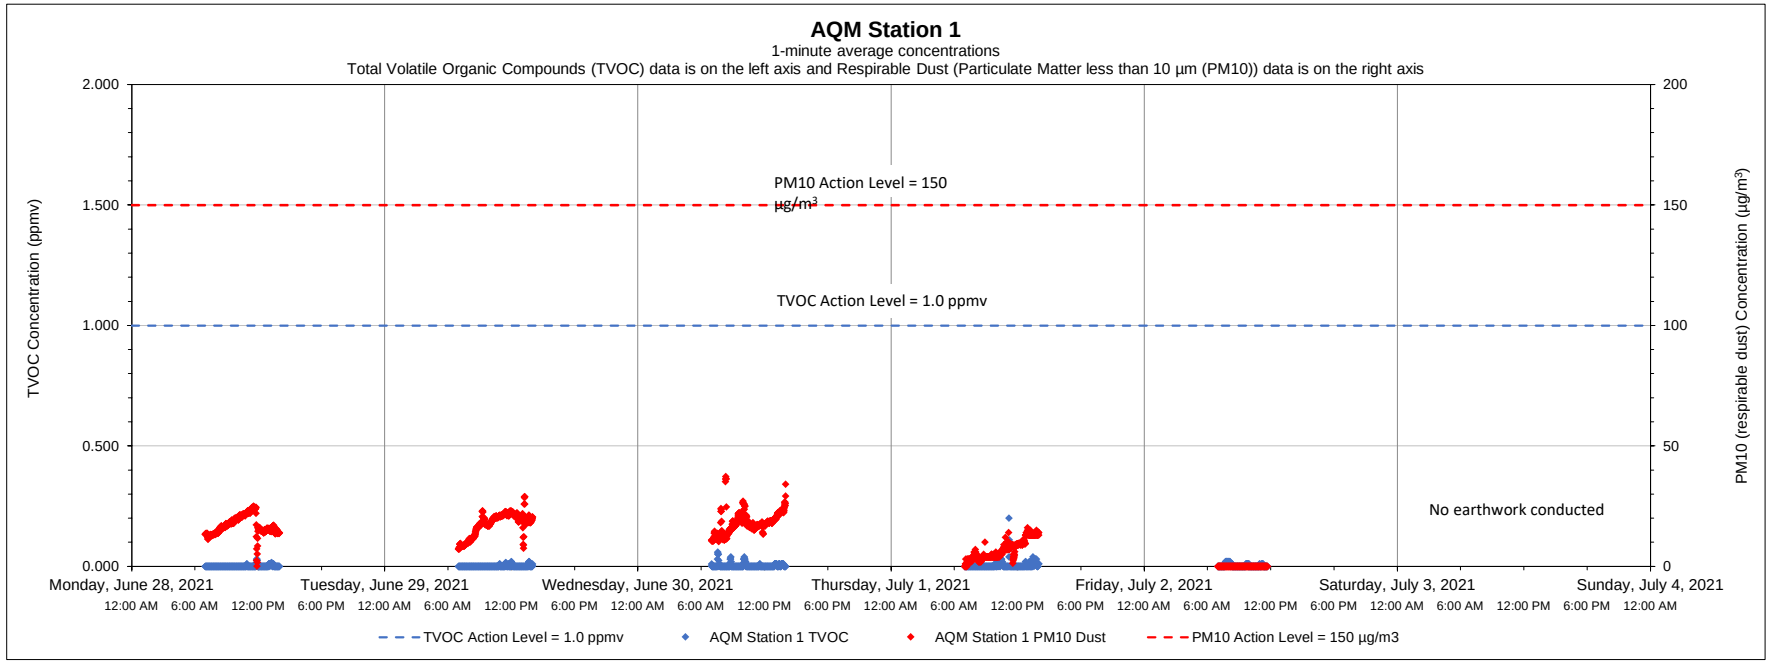
STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
7/1/2021	13:28 to 13:33	TVOC	1.05 to 1.17 ppmv	No actions taken because the readings were not attributed to site work
7/1/2021	13:35 to 13:41	TVOC	1.00 to 1.09 ppmv	No actions taken because the readings were not attributed to site work
7/2/2021	09:36 to 10:00	TVOC	1.02 to 1.81 ppmv	No actions taken because the readings were not attributed to site work
7/2/2021	10:08 to 10:21	TVOC	1.01 to 1.03 ppmv	No actions taken because the readings were not attributed to site work
Equipment Notes				
7/2/2021 -Equipment error caused sustained action level exceedances. A handheld PID was utilized to confirm that the station's readings were inaccurate,				
and the site was checked for odors. Troubleshooting was performed to resolve error. Equipment was removed from service and replaced.				

Data Summary Statistics		
TVOCs average concentration	0.22	ppm

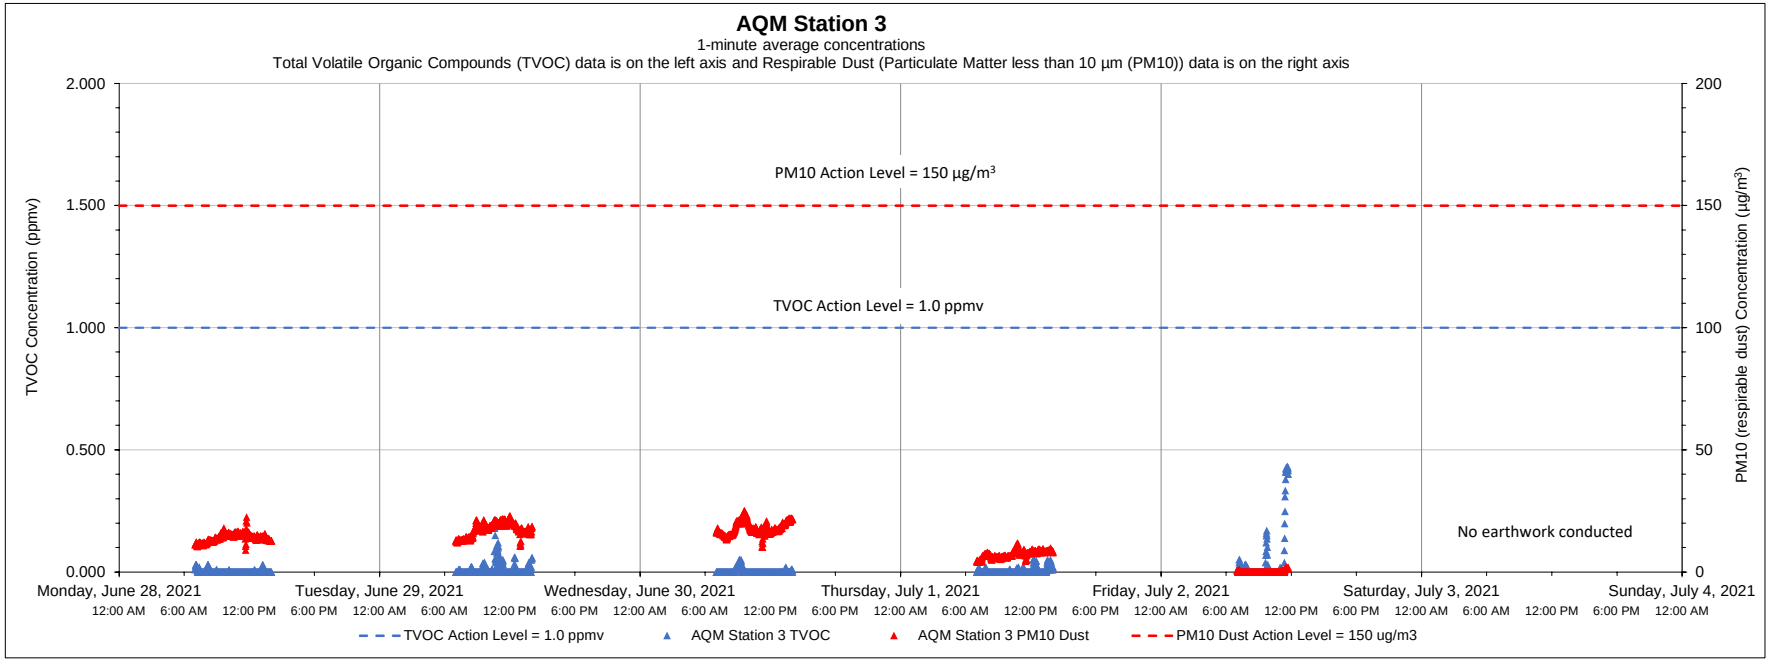
STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
None				
Equipment Notes				
None				

Data Summary Statistics		
TVOCs average concentration	0.02	ppm
TVOCs maximum concentration	0.55	ppm
TVOCs action level	1	ppm
PM10 average concentration	10.28	µg/m^3
PM10 maximum concentration	66.87	µg/m^3
PM10 action level	150	µg/m^3

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

GZA Job No. 03.0033554.04

03/21/2022

Liquefaction Facility Project -

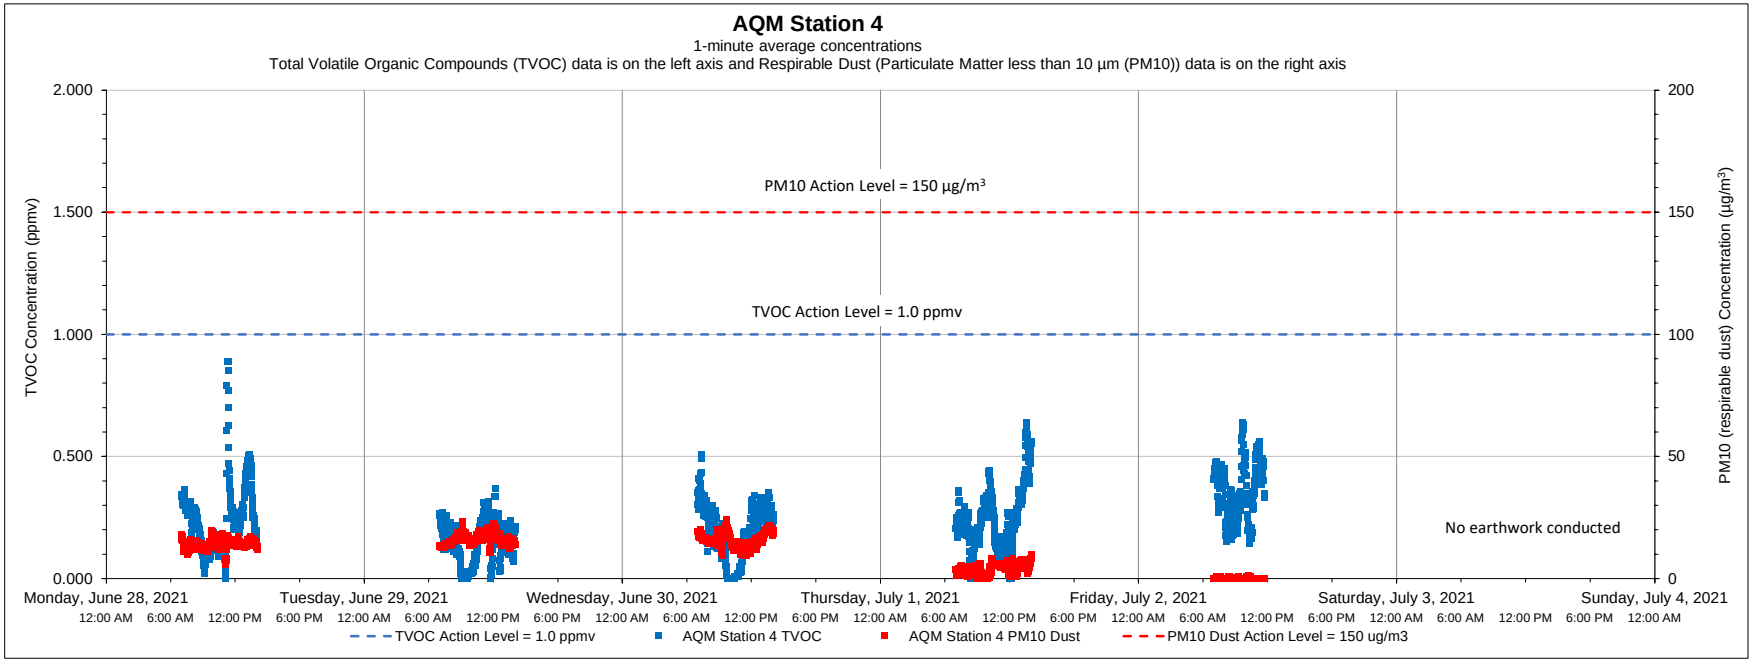
STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
3/16/2022	11:24 to 11:35	TVOC	1.14 to 2.52 ppmv	No action taken because readings were not related to site work.
Equipment Notes				
None				

Data Summary Statistics		
TVOCs average concentration	0.04	ppm
TVOCs maximum concentration	2.52	ppm
TVOCs action level	1	ppm
PM10 average concentration	22.20	µg/m³
PM10 maximum concentration	105.04	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

4/6/2022	14:35 to 14:48	TVOC	3.22 to 9.16 ppmv	No actions taken because readings not related to site work.
Equipment Notes				
Station 3 was experiencing equipment error from 6:59 to 14:48 on 4/6/22. TVOCs and respirable dust readings from all other stations and the work zone were less than action levels during this period.				
Based on the readings from other stations and observations onsite, these reading were equipment error.				

Data Summary Statistics		
TVOCs average concentration	0.18	ppm
TVOCs maximum concentration	10.25	ppm
TVOCs action level	1	ppm
PM10 average concentration	2.26	µg/m^3
PM10 maximum concentration	21.00	µg/m^3
PM10 action level	150	µg/m^3

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.

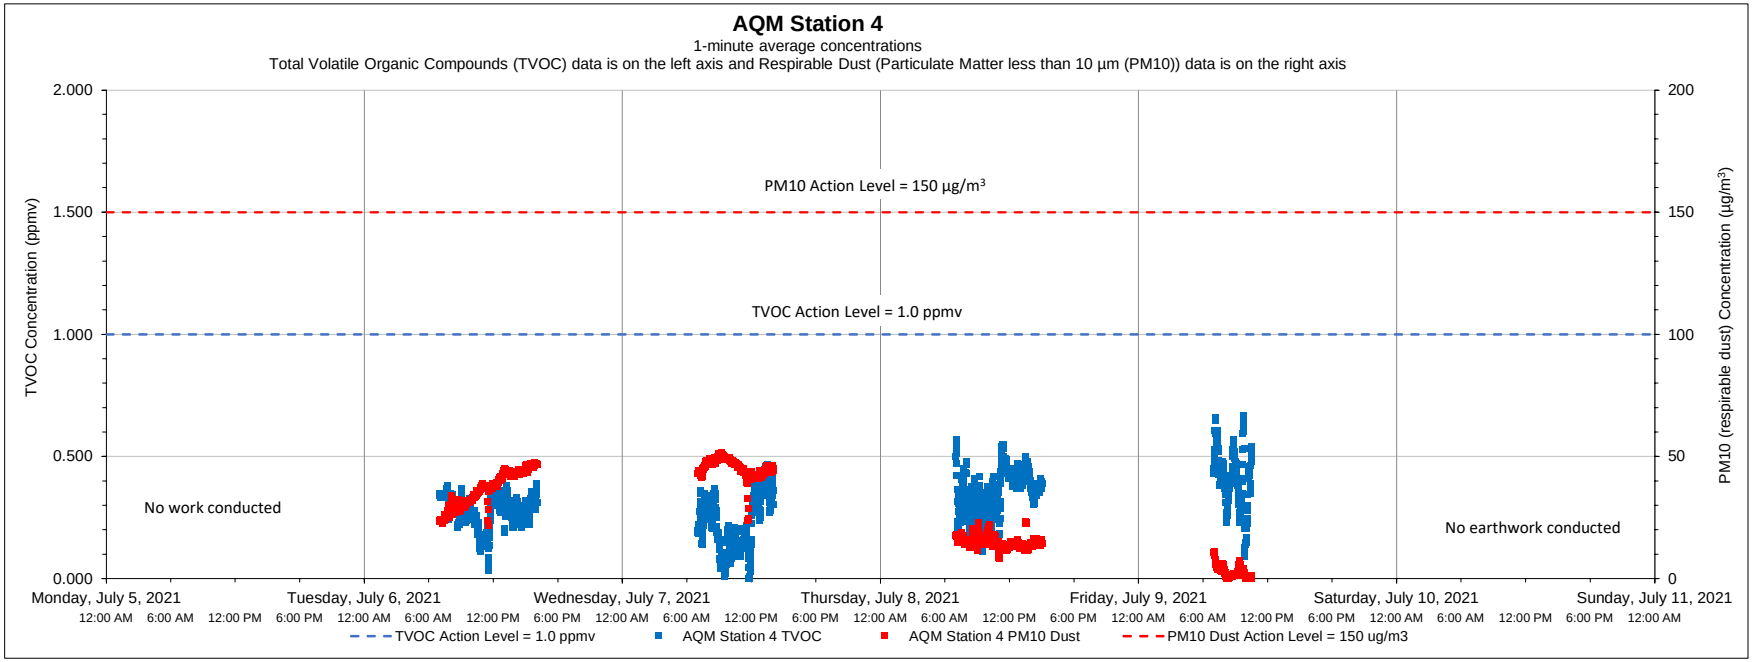
Liquefaction Facility Project -

STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
1/25/2022	15:33 to 15:44	TVOC	1.44 to 4.80 ppmv	Equipment was recalibrated.
1/25/2022	16:05 to 16:34	TVOC	1.23 to 3.11 ppmv	Equipment was recalibrated.
1/25/2022	16:43 to 16:53	TVOC	1.12 to 1.68 ppmv	Equipment was recalibrated.
1/26/2022	7:07 to 7:18	TVOC	1.24 to 4.18 ppmv	Equipment was recalibrated.

Data Summary Statistics		
TVOCs average concentration	0.10	ppm
TVOCs maximum concentration	4.80	ppm
TVOCs action level	1	ppm
PM10 average concentration	25.41	µg/m^3
PM10 maximum concentration	85.92	µg/m^3
PM10 action level	150	µg/m^3

Equipment Notes
1/25/2022 and 1/26/2022 - Equipment error caused sustained action level exceedances. A handheld PID was utilized to confirm that the station's readings were inaccurate,
and the site was checked for odors. Troubleshooting was performed to resolve error.

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

Liquefaction Facility Project -

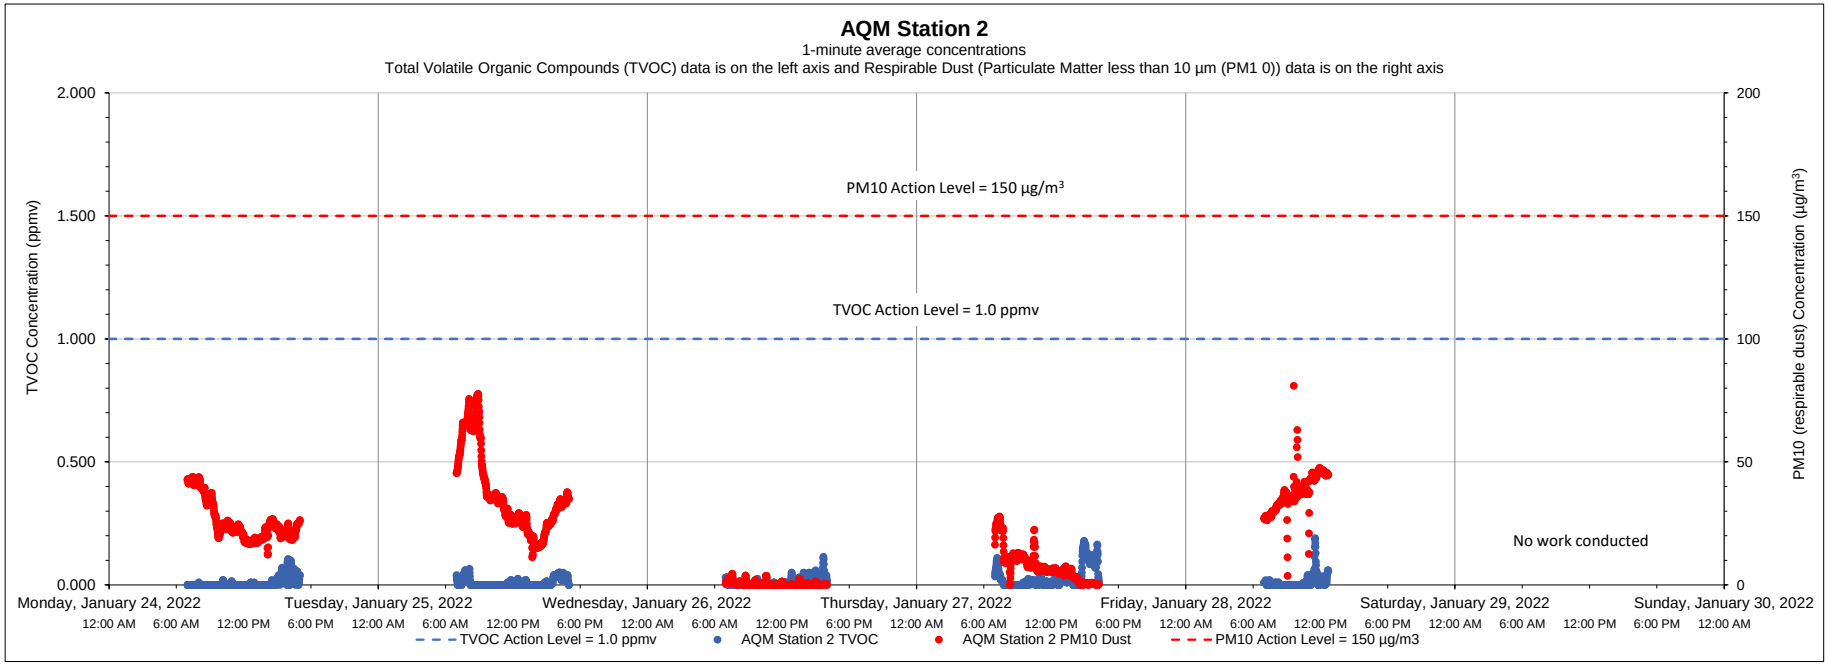
STRAP Perimeter Air Quality Monitoring (AQM)

121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
4/6/2022	6:59 t 7:11	TVOC	1.01 to 2.89 ppmv	No actions taken because readings not related to site work.
4/6/2022	8:04 to 8:33	TVOC	1.28 to 6.21 ppmv	No actions taken because readings not related to site work.
4/6/2022	10:48 to 11:01	TVOC	1.63 to 7.06 ppmv	No actions taken because readings not related to site work.
4/6/2022	11:57 to 12:12	TVOC	1.25 to 10.25 ppmv	No actions taken because readings not related to site work.
4/6/2022	13:47 to 14:05	TVOC	1.31 to 8.89 ppmv	No actions taken because readings not related to site work.
4/6/2022	14:35 to 14:48	TVOC	3.22 to 9.16 ppmv	No actions taken because readings not related to site work.
Equipment Notes				
Station 3 was experiencing equipment error from 6:59 to 14:48 on 4/6/22. TVOCs and respirable dust readings from all other stations and the work zone were less than action levels during this period.				
Based on the readings from other stations and observations onsite, these reading were equipment error.				

Data Summary Statistics		
TVOCs average concentration	0.18	ppm
TVOCs maximum concentration	10.25	ppm
TVOCs action level	1	ppm
PM10 average concentration	2.26	µg/m^3
PM10 maximum concentration	21.00	µg/m^3
PM10 action level	150	µg/m^3

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

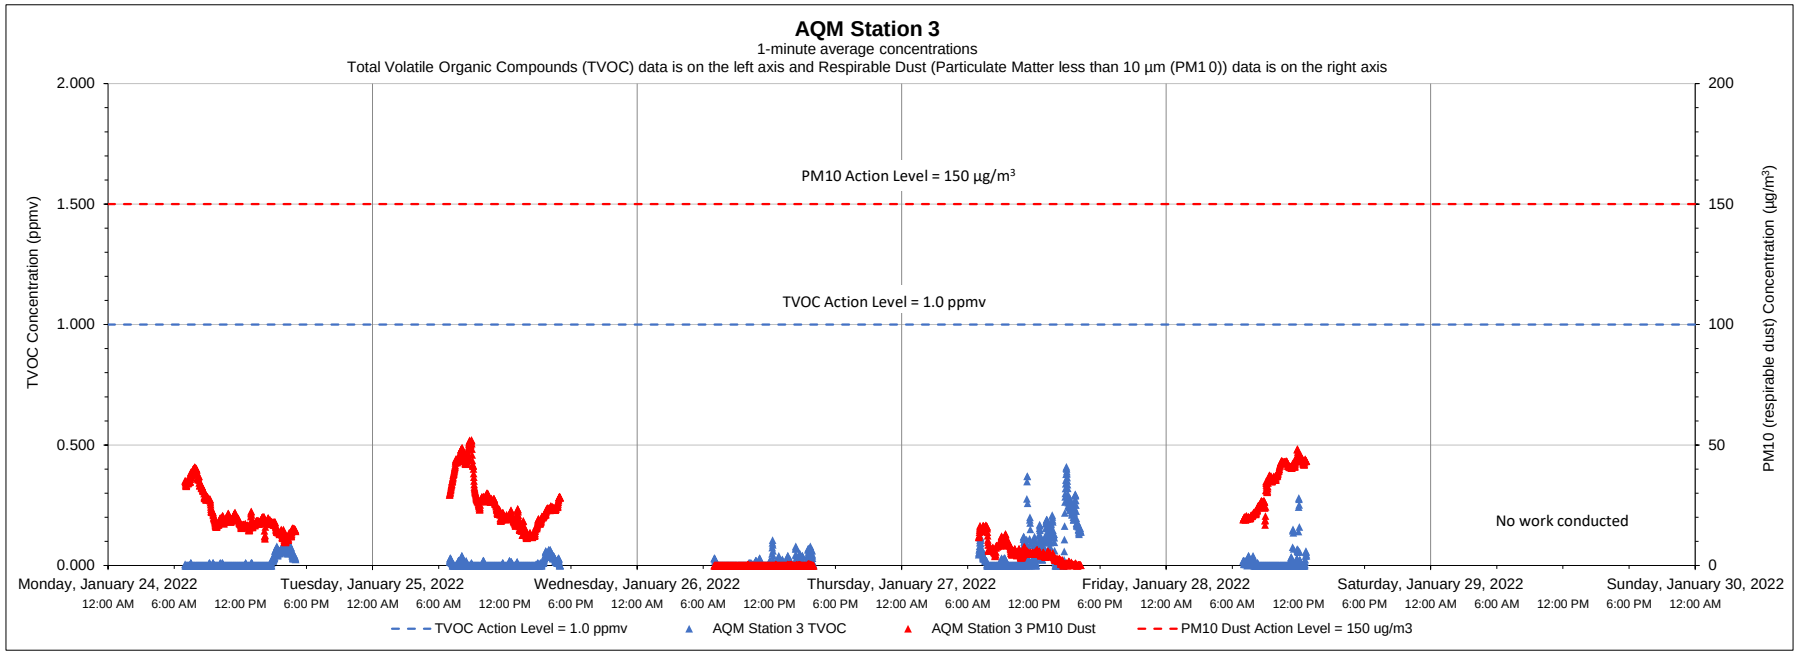
121 Terminal Road / 642 Allens Avenue, Providence, Rhode Island



Date	Time	Constituent	Observed Range of Sustained Readings	Response Actions Performed
6/8/2022	9:09 to 9:15	TVOC	1.12 to 1.55 ppmv	No actions taken, readings not related to site work.
Equipment Notes				
None				

Data Summary Statistics		
TVOCs average concentration	0.07	ppm
TVOCs maximum concentration	1.55	ppm
TVOCs action level	1	ppm
PM10 average concentration	9.71	µg/m³
PM10 maximum concentration	54.99	µg/m³
PM10 action level	150	µg/m³

Notes:

1) Transient readings were conducted over a one minute time period. A reading is sustained if it is held for over a five minute time period.

2) The location of each AQM Station is presented on the attached summary figure.

3) Air quality monitoring performed in accordance with the May 12, 2017 Short Term Response Action Plan (STRAP), the October 11, 2017 STRAP Addendum (including Attachment N - Clarifications to the Proposed Air Monitoring Program for STRAP Activities) and the October 27, 2017 Short Term Response Action Approval Letter issued by RIDEM. Monitoring conducted during active STRAP activities.
