

### Emissions Summary Table for Selected Pollutants

**Facility:**

**Reporting Year 2019**

Boiler or Process Originating Air Pollution	Appr. No(s).	Stack No.	Particulate	SO <sub>x</sub>	NO <sub>x</sub>		VOC <sup>1,2</sup>		CO	
			(lb/yr)	(lb/yr)	(lb/yr)	PPSD <sup>3</sup>	(lb/yr)	PPSD	(lb/yr)	PPSD
<b>Total</b>										

<sup>1</sup>Emission estimates for each Listed Air Contaminant on the purple sheet, ammonia, PM2.5 and PM10 should be recorded in a separate table or spreadsheet. Miscellaneous VOC (Misc. VOC) may be used to report VOCs from fuel burning or to report in the aggregate small quantities of VOCs (<500 lbs.) that are not Listed Air Contaminants.

<sup>2</sup>Report emissions before and after Rule Effectiveness, if applicable. Label carefully. Previously, RIDEM has used a notation such as 75.46(RE) to denote that an emission estimate has been adjusted for Rule Effectiveness.

<sup>3</sup>PPSD = Pounds per summer day, i.e., pounds per typical peak ozone season day.
