

RHODE ISLAND
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

235 Promenade Street, Providence, RI 02908-5767 TDD 401-222-4462

January 30, 2008

The Honorable Donald L. Carcieri
Governor, State of Rhode Island
Executive Chambers
State House
Providence, Rhode Island 02903

Dear Governor Carcieri:

I am pleased to submit the 2007 Annual Report on the activities of the Dam Safety Program in the Department of Environmental Management. The report has been prepared in accordance with Chapter 46-19 of the Rhode Island General Laws. I would like to take this opportunity to highlight a number of important on- going projects within the Department's Dam Safety Program.

Through the Dam Safety Program and your Executive Order 05-20, the Department continues to address unsafe dams. There are two unsafe dams on the list for 2007; both owners are cooperating and progressing toward resolution.

In 2007, the Department promulgated the Dam Safety Regulations. These regulations will clarify the permitting process for dam maintenance and repair projects and the numerous responsibilities associated with owning a dam in Rhode Island (e.g., inspections, repairs, liability, and permitting). Prior to promulgation, the Dam Safety Program conducted a workshop, incorporating changes based on comments received, as appropriate, prior to finalizing the draft regulations. The formal public hearing was held on the draft regulations and resulted in no new comments. The regulations were promulgated on December 20, 2007. In 2008, the Dam Safety Program will be registering dams and notifying owners of their dam's hazard classification and inspection requirements.

In 2007, the Department continued to utilize Federal Emergency Management Agency (FEMA) grants to complete dam hazard classification assessments and inundation maps for select dams and to purchase equipment to allow the Dam Safety Program to operate more efficiently. Also in 2007, we received an additional \$26,862 FEMA grant to further improve the Dam Safety Program.

In 2006, the General Assembly passed legislation (S-2510A/H-7609A) requiring the preparation of emergency action plans (EAPs) for all high and significant hazards dams in Rhode Island. The legislation was introduced at the request of your office and RI DEM. The heavy rains of October 2005 here in RI and the dam emergency situation which threatened Taunton, MA during the same time period prompted RI DEM and your office to examine RI's emergency preparedness for dam related matters. Under this new law, by July 1, 2008, an EAP shall be prepared for each significant or high hazard dam by the city or town wherein the dam lies. An EAP is a formal document that identifies potential emergency conditions at a dam and specifies pre-planned actions, including notification information, to be followed to minimize property damage and loss of life. EAPs often times include a dam breach analysis, inundation mapping and emergency notification/evacuation plans. Under this new law, RIEMA is required to develop guidelines for the preparation of EAPs with cooperation from DEM and the RI League of Cities and Towns. RIEMA developed an EAP Template which was presented to cities and towns at a workshop on January 23, 2008. RI DEM will continue to work closely with RIEMA.

As you may be aware, the Department's Dam Safety Program has only one full time position to conduct all of the inspections and grant work identified in the annual report. While our efforts with one full time position are, if I do say so myself, extremely impressive there is still considerable work to do in the area of dam safety. RIEMA and RI DEM working collaboratively with limited additional staff, the State would be in a better position to expand comprehensive efforts to address dam safety across Rhode Island.

I hope this information is useful and will be glad to answer any questions you may have regarding this program.

Sincerely,

A handwritten signature in black ink that reads "W. Michael Sullivan". The signature is fluid and cursive, with a long horizontal flourish at the end.

W. Michael Sullivan, Ph.D.
Director

C/ The Honorable Joseph Montalbano, Senate President
The Honorable M. Teresa Paiva-Weed, Senate Majority Leader
The Honorable William Murphy, Speaker of House
The Honorable Gordon Fox, House Majority Leader
The Honorable Dennis Algieri, Senate Minority Leader
The Honorable Robert Watson, House Minority Leader

HISTORY OF RHODE ISLAND'S DAM SAFETY PROGRAM

The Rhode Island dam inspection and inventory program had its inception in 1883, and was under the authority and responsibility of the Commissioner of Dams and Reservoirs. At that time, there were 86 dams included in the inventory records; today, there are 672 inventoried dams. A list of these dams, sorted by town and river, is attached.

STATUTES

As set forth in Rhode Island General Laws, Chapters 46-18 and 46-19, a dam owner has the responsibility for the safe operation of his/her dam, and is liable for the consequences of accidents or failures of the dam. In general, a dam owner is required to use "reasonable care" in the operation and maintenance of a dam. This responsibility includes the proper operation, maintenance, repair and rehabilitation of a dam, which are essential elements in preventing a dam failure.

The criteria governing the administration and enforcement of Rhode Island's Dam Safety Program are contained in the General Laws of Rhode Island, Chapter 46-19. The Department of Environmental Management (DEM) has the responsibility to cause to be inspected dams to determine their condition, to review and approve plans for construction or substantial alteration of a dam, to order the owner to make repairs or to take other necessary action to make a dam safe.

Section 46-12.2-2 was amended in 2001, authorizing the Clean Water Finance Agency to issue loans for projects associated with dam safety.

In 2005, Chapter 45-62 (Dam Management Districts) was added, authorizing municipalities to create dam management districts to collect funds for dam repairs, maintenance, management and/or removal.

Two amendments to Chapter 46-19 were enacted in 2006. Section 4 was amended to authorize DEM, in an emergency, to take necessary actions to mitigate an unsafe condition at a dam and to assess the costs of those actions against the dam owner. Section 9 was amended to require a city or town where a high or significant hazard dam is located, and to require a state agency that owns a high or significant hazard dam, to complete by July 1, 2008, an Emergency Action Plan (EAP) for the dam. Rhode Island's Emergency Management Agency (EMA) is responsible for coordinating development of the EAPs and must give final approval for the EAP to be considered complete.

GOVERNOR'S TASK FORCE ON DAM SAFETY AND MAINTENANCE

In May 2000, Governor Almond issued Executive Order 00-6, *Creation of Dam Safety and Maintenance Task Force*. The Task Force was charged with developing recommendations for a comprehensive program of monitoring, maintenance and repairs that will enhance upkeep and safety of the dams in the State.

The Task Force, co-chaired by the Directors of DEM and EMA, was comprised of representatives of the RI Budget Office, the RI Clean Water Finance Agency, the Natural Resources Conservation Service, Public Works Directors for three Rhode Island municipalities, five dam associations, two dam owners, and four members of the General Assembly (not all General Assembly members were officially appointed to the Task Force).

The Task Force convened for 12 two hour sessions over a six month period, and finalized their recommendations in a report dated January 2001. The recommendations included legislative, regulatory, administrative and policy proposals designed to protect public safety, create an efficient approach to dam repairs and ensure a timely response should a community be threatened by a dam failure.

Although the proposed legislation developed by the Task Force was not enacted, DEM identified a number of recommendations that have been implemented through regulation (see *Dam Safety Regulations* on page 9).

Upstream side of Arctic Dam (No. 148), West Warwick

INSPECTION PROGRAM

Each dam's hazard classification determines the frequency of inspection. The higher the classification, the more frequently the inspection is conducted. A high or significant hazard dam is also inspected upon request by the owner, a municipal official, or a person owning or representing property liable to damage from the dam in the event of failure.

The inspections performed by DEM are visual inspections and are conducted under a general inspection format based on guidelines established in 1976 by the United States Army Corps of Engineers (ACOE) for the National Program for the Inspection of (Non-Federal) Dams.

As part of each visual inspection, the condition of the major components of the dam are subjectively rated as *good*, *fair* or *poor*. The major components of a dam are the embankment, the spillway and the low level outlet. *Good* is defined as meeting minimum guidelines, whereas no irregularities are observed and the component appears to be maintained properly. *Fair* indicates a component which requires maintenance (e.g., missing mortar in a masonry wall that has not yet caused displacement of the masonry units). *Poor* indicates a component that has deteriorated beyond a maintenance issue and requires repair; the component no longer functions as it was originally intended (e.g., an inoperable low level outlet, a permanently blocked outlet, or an earthen embankment with extensive, deep rooted vegetation).

Following a visual inspection, a dam inspection report is prepared, identifying specific deficiencies and, when warranted, recommending corrective measures. A copy of the report is forwarded to the owner, with the expectation that the deficiencies will be corrected. However, unless DEM has determined that a dam is unsafe, DEM can only recommend corrective measures, rather than require them. If a dam is determined to be unsafe, then DEM may order corrective actions.

ACTIVITIES IN 2007

UNSAFE DAMS

One of DEM's primary responsibilities in the Dam Safety Program is to identify unsafe dams and take appropriate action to return the dams to a safe condition. DEM has defined an unsafe dam as a high or significant hazard dam in which an unreasonable risk of failure exists.

In 2007, DEM was working to address two (2) dams deemed to be unsafe, as indicated in the following table:

TOWN	DAM NO.	DAM NAME	HAZARD CLASSIFICATION	EMBANKMENT	SPILLWAY	LOW LEVEL OUTLET
Hopkinton	229	Blue	Significant	Poor	Fair	Poor
Lincoln	295	Limerock	High	Poor	Fair	Not Present

A summary of the activities completed in 2007 regarding the two unsafe dams follows:

Dam number 229 (Blue) in Hopkinton

DEM's engineering consultant inspected the dam to reassess its hazard classification (see *Grants To DEM* on page 12) and submitted a report to DEM recommending the dam be classified as a significant hazard. In addition to the classification, the report advised DEM of a potential unsafe condition at the dam. That is, significant leakage at two locations along with other stability problems including the downstream masonry wall tipping slightly downstream, downward movement of the material on the upstream and downstream slopes, and sinkholes on the crest were observed. DEM issued an informal enforcement action to the dam owner in April 2007. The action required the owner to temporarily lower the impoundment such that leakage no longer poses a safety threat, and to develop a report specifying how the dam will be returned to a safe condition. Due to the significant leakage and lack of precipitation, the impoundment lowered without further intervention. The owner is working with an engineering consultant on developing a long term plan to permanently lower the impoundment. The plan is expected to be finalized in February 2008.

Seepage/leakage at Blue Dam (No. 229), Hopkinton

Dam number 295 (Limerock) in Lincoln.

DEM's engineering consultant inspected this dam and advised DEM, in their hazard classification report, of conditions present at the dam which could lead to an unsafe condition. DEM followed up this report with a visual inspection of the dam. The inspection revealed that the condition of the spillway was inadequate and the dam was unsafe. DEM issued an informal enforcement action to the Town of Lincoln in April 2005 as the owner of the dam. The action required that the Town perform frequent inspections of the dam, lower the impoundment as a temporary measure and retain an engineer to develop a plan that described how the dam would be made safe. In October 2005, the Town submitted an engineering report to DEM that presented options for addressing both the short term and long term safety of the dam. In 2006, the Town implemented the short term measures and their engineer was completing the final evaluations to address the long term measures. The Town and their engineer met with DEM in July 2007 to review progress and verify that the proposed direction of permanently lowering the impoundment, is feasible. During 2007, the Town continued monitoring the dam on a regular basis and worked with partners collecting data to be utilized in the DEM permitting process.

INSPECTIONS

High Hazard Dam Inspections

In 2004, all seventeen of the dams that were previously classified as high hazard were inspected, but the reports were not completed. Subsequent inspections were scheduled for 2006, and the reports were to include the findings from the 2004 inspections. However, due to limited staff and higher priority work requirements, it was decided that only the six dams that had a "poor" rating in 2004 would be inspected. Two such inspections were performed in 2006 but the reports were not completed. In 2007, the other four dams were inspected and the reports were completed for all six dams and included findings from the 2004 inspections. The six dams are listed in the following table:

TOWN	DAM NO.	DAM NAME	EMBANKMENT	SPILLWAY	LOW LEVEL OUTLET
Cumberland	078	Pawtucket Reservoir	Good To Fair	Good	Good
East Providence	407	James V Turner Reservoir	Good To Fair	Good To Fair	Good
Smithfield	126	Georgiaville Pond	Fair To Poor	Fair	Good to Fair
Smithfield	108	Stillwater Reservoir	Good	Good	Good
West Warwick	148	Arctic	Fair to Poor	Good	Poor
West Warwick	145	Natick Pond	Fair	Fair	Poor

Natick Dam (No. 145), Warwick & West Warwick

DEM will develop a revised inspection schedule in early 2008, based on the frequency requirements in the new Rules and Regulations for Dam Safety (see *Dam Safety Regulations* on page 9).

Significant Hazard Dam Inspections

No significant hazard dams were inspected in 2007. As indicated under High Hazard Dam Inspections (above), DEM will develop a revised inspection schedule in early 2008, based on the frequency requirements in the new Rules and Regulations for Dam Safety (see *Dam Safety Regulations* on page 9).

Requested Inspections

State law requires DEM to inspect any dam upon a written request by a person owning property that would be subject to harm resulting from failure of the dam, or by a city or town official concerned with loss of life or damage to a highway or bridge resulting from the failure. The following 12 dams were inspected based on such requests or requests from some other concerned person:

TOWN	DAM NO.	DAM NAME	HAZARD CLASSIFICATION	REASON FOR INSPECTION REQUEST	OUTCOME
Coventry	186	Upper	Significant	Severe erosion & seepage	Valid – repaired
Coventry	187	Middle	Significant	Pond level dropping	Unfounded
Cumberland	79	Rawson	Low	Dam leaning	Unfounded
Glocester	29	Mower	Significant	Pond level lowered	Valid – no further action
Glocester	381	Sucker Brook	Significant	Pond emptied	Valid – repaired
Johnston	170	Simmons Upper	High	Leakage	Valid – minor leakage
North Providence	760	Louisquisset Flood Control	High	Dam cracked	Valid – minor cracks
Scituate	657	Betty Pond	Low	Dam breached	Valid – no further action
Scituate	160	Hope	Significant	Vegetation removal	Valid – no further action
Smithfield	116	Hopkins	Significant	Pond level lowered	Valid – no further action
Smithfield	121	Lower Sprague	Significant	Vegetation removal	Valid – no further action
Warwick	764	Grist Mill	High	Dam failing	Unfounded – seepage present

Dam number 29 (Mower) in Glocester was inspected following a complaint that the impoundment has been about 12 inches lower than usual. The dam owner indicated that the drain valve was inoperable. An inspection revealed that the pond was 12 inches lower than previously, however, this level is appropriate for this dam. The previous level exceeded the spillway capacity and was not an appropriate level for proper operation of the dam under normal conditions.

Dam number 79 (Rawson) in Cumberland was inspected following a complaint that the dam was leaning downstream. Although inspection revealed that wooden portions of the dam were deteriorated and leaking, it was not leaning.

Dam number 116 (Hopkins) in Smithfield was inspected following a complaint that the pond was about one foot lower than typical due to a lack of water being released from the next upstream dam (Slack, number 115). Inspection revealed that Slack pond was at an elevation of about six inches below the spillway and therefore not spilling water into Hopkins Pond. Hopkins pond was just above the elevation of the spillway. The high water mark on a nearby rock was about 6 inches higher. Seepage through the dam was observed on the upstream slope and was likely contributing to a lowered pond level. However, the current level appeared to be normal. The operator of the Slack Dam agreed to coordinate with the complainant and open the pond drain to allow flow into Hopkins Pond.

Dam number 121 (Lower Sprague) in Smithfield was inspected following a complaint that the owner was removing vegetation in the vicinity of the dam. Inspection and discussion with the owner revealed that he was attempting to drain pooled water from the base of the dam. Since the pooled water did not appear to be impacting the safety of the dam, DEM advised the owner to stop the clearing, to which he agreed.

Dam number 160 (Hope) in Scituate was inspected following a complaint that vegetation was being removed from the dam and surrounding areas. Inspection revealed that nearly all vegetation (brush and various size trees) were removed from the dam and downstream areas. Bare soil remained on much of the dam which the owner was advised to stabilize. DEM has taken enforcement action against the dam owner for removing vegetation in areas beyond that which is allowed for dam safety.

Dam number 170 (Simmons Upper) in Johnston was inspected following a complaint of seepage adjacent to the spillway. Inspection revealed the presence of flow where it should not have been. However, it could not be determined if the water was flowing through the dam or under the training wall's cap stone. The flow was clear and there did not appear to be an immediate safety concern.

Dam number 186 (Upper) in Coventry was inspected following a complaint that there was severe erosion (3 to 4 feet deep) and leakage adjacent to the spillway pipe. Upon inspection, the dam owner had already repaired the dam, which was functioning properly.

Dam number 187 (Middle) in Coventry was inspected following complaints that the pond level was dropping. Inspection revealed that the dam was operating properly. The corrugated metal pipes which made up the primary spillway were flowing about one third full and the pond appeared to be at its normal level.

Dam number 381 (Sucker Brook) in Gloucester was inspected following a complaint that the wooden spillway / low level drain boards had failed. Inspection revealed that more than half of the pond depth had drained. The complainant, who was not the dam owner, installed replacement boards to allow the pond to restore to full depth.

Dam number 657 (Betty Pond) in Scituate was investigated following a complaint that the dam breached. Telephone conversations with the owner (a major drinking water supplier) indicated that the dam was operating properly. Water flow over the spillway, which is not well defined, is perpendicular to the adjacent road and may appear to be an overtopping or breached dam to passersby.

Dam number 760 (Louisquisset Flood Control) in North Providence was inspected following a complaint that the dam was cracked. Inspection of the dam, which consists of a concrete spillway/embankment with small end sections of earth embankment, contained a couple of cracks in the downstream face of the concrete. The cracks appeared to be pre-existing with vegetation growing in one of them. There were no indications of movement of the dam and it was uniformly aligned.

Dam number 764 (Grist Mill) in Warwick was inspected following a complaint that the dam was failing. Inspection revealed two areas of seepage from the base of the earthen embankment. The discharge from each area was estimated at no more than one gallon per minute of clear flow. Sediment was present in the pooled water created by the flow, which may indicate that material within the dam was carried with the flow. DEM is in the process of identifying the dam owner and will monitor the dam.

Areas of seepage at Grist Mill Dam (No. 764), Warwick

Other Inspections

The following dams were inspected as indicated:

TOWN	DAM NO.	DAM NAME	HAZARD CLASSIFICATION	REASON FOR INSPECTION
Charlestown	576	King Tom	Low	Repair request
Johnston	504	Dexter	Significant	Safety concerns
Scituate	160	Hope	Significant	Repair request

Dam number 160 (Hope) in Scituate was inspected following a request by the owner, who wanted to discuss repair on a eroded section of the earthen embankment. The owner later submitted a repair plan completed by an engineer for DEM approval.

Dam number 504 (Dexter) in Johnston. DEM contracted with GZA GeoEnvironmental, Inc. (GZA) to determine the hazard classifications of dams throughout the state (see *Grants to DEM* on page 12), including Dexter Dam. Although GZA was not tasked with inspecting the condition of the dams, they made a special note in their report when they observed a condition of concern. They made such a note in a draft report submitted to DEM, indicating a partially breached area that appeared to have been overtopped several times in recent history. They also recommended a detailed engineering inspection leading to reconstruction of the breached area as soon as possible. DEM then reviewed the dam file against field measurements and determined that the breached area was actually an emergency spillway. Although poorly maintained, the dam did not appear to be unsafe or require emergency action.

Dam number 576 (King Tom) in Charlestown was inspected following submittal of a repair request. The dam is under the jurisdiction of the Coastal Resources Management Council and DEM, and both agencies met with the dam owner's representative at the dam to clarify the proposed work. The work of concern to DEM included brush and tree removal and filling sink holes. Following receipt of additional documentation, both agencies approved the work.

DAM SAFETY REGULATIONS

In 2002, DEM began drafting Dam Safety Regulations to incorporate those recommendations from the Governor's Task Force on Dam Safety and Maintenance (see page 3) that can be implemented within the framework of the existing statute. In 2004, the draft regulations were about 90% complete.

In 2005, DEM completed a preliminary draft of the Dam Safety Regulations. DEM then invited former members of the Task Force to participate in an initial review of the draft Dam Safety Regulations and incorporated many of their suggestions into a revised draft. In conjunction with draft Dam Safety Regulations, DEM has been drafting amendments to the Freshwater Wetlands Regulations to streamline approvals for repair of high and significant hazard dams.

In October 2006, DEM held a workshop on the draft Dam Safety Regulations. About 55 people attended the 2 hour workshop, which resulted in many questions and comments, both at the workshop and following up in letters. In December 2006, DEM forwarded to the workshop attendees a written response to comments, along with revised draft regulations reflecting comments, as appropriate.

DEM then initiated the formal process of promulgating the regulations. On July 23, 2007, a notice was placed in the Providence Journal newspaper, notifying the public that DEM was seeking comment on the proposed Dam Safety Regulations at a public hearing to be held on August 23, 2007, at the DEM headquarters. About 10 people attended the public hearing and one person submitted formal comments (these comments were also previously submitted to DEM in a May 2007 letter, to which DEM responded in writing). The public comment period remained open following the hearing for 30 days until September 24, 2007; no additional comments were received.

Since no new comments on the proposed Dam Safety Regulations were received during the public hearing and comment period, DEM executed the regulations and filed them with the Secretary of State on November 30, 2007. The regulations, which are available on DEM's website at <http://www.dem.ri.gov/pubs/regs/regs/compinsp/dams07.pdf>, became effective on December 20, 2007 and include the following:

- Definitions of important terms including dam, hazard classifications, maintenance, repair and unsafe dam;
- Assignment of a hazard classification to each dam in the state inventory;
- Requirement that owners register their dams and notify DEM when ownership is transferred (no associated fee);
- A schedule for visual inspections of high and significant hazard dams;
- Procedure to streamline repair of high and significant hazard dams (no associated permit fee); and
- A procedure for dam owners to take emergency actions at high and significant hazard dams.

In June 2007, DEM's Freshwater Wetlands Regulations were amended to allow high and significant hazard dam repair requests to be approved under the Dam Safety Regulations. The Dam Safety Program will coordinate such requests with the Freshwater Wetlands Program.

DAM CLASSIFICATIONS

Inventoried dams are classified by size and hazard ratings. The size classification provides a relative description of small, medium or large, based on the storage capacity and height of the impounded water. The hazard classification relates to the probable consequences of failure or misoperation of the dam; it does not relate to the current condition or the likelihood of failure of the dam. The hazard classifications are defined in the Dam Safety Regulations, as follows:

High Hazard – means a dam where failure or misoperation will result in a probable loss of human life.

High Hazard Dams

Significant Hazard – means a dam where failure or misoperation results in no probable loss of human life but can cause major economic loss, disruption of lifeline facilities or impact other concerns detrimental to the public's health, safety or welfare. Examples of major economic loss include washout of a state or federal highway, washout of two or more municipal roads, loss of vehicular access to residences, (e.g. a dead end road whereby emergency personnel could no longer access residences beyond the washout area) or damage to a few structures.

Significant Hazard Dams

Low Hazard – means a dam where failure or misoperation results in no probable loss of human life and low economic losses.

Low Hazard Dams

On December 20, 2007, along with promulgation of the Dam Safety Regulations, hazard classifications for all active inventoried dams were finalized. There are 92 high hazard dams, 112 significant hazard dams and 468 low hazard dams, with a total active inventory of 672 dams. The following chart illustrates the percentage of dams in each classification:

Hazard Classifications (Percent of Total Active Inventory)

DAM OWNER / CONTACT INFORMATION

DEM's records for the owners of dams that were previously classified as high or significant hazard are fairly accurate. Many of the dams which were previously classified as low hazard have been changed to significant or high hazard and the accuracy of owner information for these dams is questionable. DEM has identified about 40 dams with unknown or questionable owners and, using the FEMA grant, has contracted with two title search companies to identify the owners. The project should be complete by the end of March 2008, and owners of all 40 high and significant hazard dams will be known (pending sufficient funding).

Following identification of these owners and in accordance with the Dam Safety Regulations, DEM will formally notify each high and significant hazard dam owner of their dam's hazard classification, explain the appeals process and request contact information.

GRANTS TO DEM

From 2000 through 2007, DEM received FEMA National Dam Safety Program grants totaling \$294,768. In 2003, DEM initiated a project to update the inventory of dams in the state. In conjunction with this project, DEM utilized \$181,011 of the grant funds to hire an engineering consultant to reassess the hazard classifications of 116 dams and to provide dam failure inundation maps for 81 high and significant hazard dams. Following completion of these services in 2007, all the high and significant hazard dams have documentation supporting the hazard classification and maps showing the approximate inundation area of a dam failure.

A typical inundation map is shown below. The failed dam is in the top left side of the photo and the purple area indicates the path of the released water.

Oak Swamp Dam (No. 168), Johnston

In 2006, DEM received a FEMA grant for \$26,776. In 2007, DEM used this grant to place a notice in a local newspaper describing the public hearing process for the proposed Dam Safety Regulations, hired a stenographer to record the hearing, contributed to the purchase of a large-format map printer, purchased a digital camera, three tablet computers to be used in emergency response situations, two desktop computers and a color laser printer and contracted with two title companies to research and identify owners of 40 high and significant hazard dams.

In 2007, DEM received \$26,862, which will be used to complete identification of dam owners, if necessary, to assist in the development of a data set to be installed on the tablet computers purchased in 2006 and possibly to contract with an engineering firm to assist with visual inspection of high hazard dams.

DAM SAFETY PRESENTATION

In April 2007, DEM was invited to speak at a meeting of the RI Society of Professional Engineers. DEM provided an overview of the Dam Safety Program and the then-proposed Dam Safety Regulations.

DEM OWNED DAM REPAIRS

DEM continued to move forward under its Capital Development Projects program, undertaking the engineering evaluation, design and reconstruction at the following DEM owned dam:

TOWN	DAM NO.	DAM NAME	HAZARD CLASSIFICATION
Cranston	166	Curran Upper	High

In 2007, DEM's engineering consultant performed an evaluation of the dam and completed 10% design plans. In 2008, it is expected that a consultant will be selected to develop the final design for the reconstruction project.

EMERGENCY ACTION PLANS

Chapter 46-19, Section 9 was amended in 2006 to require a city or town in which a high or significant hazard dam is located, and to require a state agency that owns a high or significant hazard dam, to complete by July 1, 2008, an Emergency Action Plan (EAP) for the dam (see *Statutes* on page 3). An EAP is a formal document that identifies potential emergency conditions at a dam and specifies pre-planned actions to be followed to minimize loss-of-life and property damage. The law mandates that Rhode Island's Emergency Management Agency (EMA) coordinate development of the EAPs, and must give final approval for an EAP to be considered complete. The law also requires DEM and the Rhode Island League of Cities and Towns to cooperate with EMA.

State owned high and significant hazard dams are as follows:

TOWN	DAM NO.	DAM NAME	HAZARD CLASSIFICATION	OWNER
CRANSTON	198	CURRAN LOWER RESERVOIR	HIGH	RIDEM PARKS & RECREATION
CRANSTON	166	CURRAN UPPER RESERVOIR	HIGH	RIDEM PARKS & RECREATION
CRANSTON	340	MESHANTICUT PARK POND	SIGNIFICANT	RIDEM PARKS & RECREATION
EXETER	221	BROWNING MILL POND	HIGH	RIDEM FISH & WILDLIFE
FOSTER	347	YOUNG'S POND	SIGNIFICANT	RIDEM FISH & WILDLIFE
GLOCESTER	566	BOWDISH RESERVOIR	HIGH	RIDEM FORESTRY
GLOCESTER	018	BURLINGAME RESERVOIR UPPER	HIGH	RIDEM FISH & WILDLIFE
GLOCESTER	499	DURFEE HILL WILDLIFE MARSH #2	SIGNIFICANT	RIDEM FISH & WILDLIFE
HOPKINTON / RICHMOND	245	HOPE VALLEY MILL POND	SIGNIFICANT	RIDEM FISH & WILDLIFE
HOPKINTON / RICHMOND	216	WYOMING UPPER	HIGH	RIDEM FISH & WILDLIFE
LINCOLN	102	OLNEY POND	HIGH	RIDEM PARKS & RECREATION
LITTLE COMPTON	474	SIMMONS POND	SIGNIFICANT	RIDEM FISH & WILDLIFE
NORTH KINGSTOWN	444	SILVER SPRING LAKE	SIGNIFICANT	RIDEM FISH & WILDLIFE
SMITHFIELD	108	STILLWATER RESERVOIR	HIGH	RIDEM FISH & WILDLIFE

In October 2007, EMA presented a draft EAP template to DEM and the League of Cities and Towns for review. DEM provided comments to EMA which made changes to the template and finalized it.

The EAP template was presented to city and town officials in January 2008. DEM will provide dam failure inundation maps for high and significant hazard dams to the municipalities for use in developing the EAP.

TECHNICAL GUIDANCE DOCUMENT

DEM has made available a document titled, *Dam Safety – An Owner's Guidance Manual*, prepared by FEMA and the state of Colorado. The document is available on DEM's website at <http://www.dem.ri.gov/programs/benviron/compinsp/pdf/damguide.pdf>.

DAM MANAGEMENT DISTRICTS

Under state law, municipalities have the authority to create dam management districts to collect funds for the maintenance and repair of dams within their boundaries. In 2007, DEM was aware of three municipalities that were considering creating such districts.

DEM attended a meeting with the Town of Burrillville and local residents in March 2007. Discussions involved creating a management district for the Pascoag Reservoir Upper Dam (No. 16), which is a privately owned, high hazard dam.

In April 2007, DEM met with Smithfield's Town Planner to discuss the Town's interest in creating a town-wide management district for all dams within the Town boundaries.

DEM also attended a public workshop held by the Town of Exeter in August 2007, regarding their interest in creating a management district for Boone Lake Dam (No. 219), a privately owned, high hazard dam.

PROFESSIONAL ASSOCIATIONS

Rhode Island has been a member of ASDSO since its inception in Denver, Colorado in 1984. ASDSO membership consists of state representatives along with corporate and individual members representing dam owners and professional engineering firms. ASDSO was formed to serve these initial functions:

- Improve efficiency and effectiveness of state dam safety programs;
- Foster public awareness;
- Facilitate inter-organizational, intergovernmental and interstate cooperation;
- Assist the dam safety community and provide a forum for the exchange of information;
- Provide representation of dam safety interests before state legislatures and before Congress; and
- Manage the association effectively through internal policies and procedures.

ASDSO has helped to improve dam safety in Rhode Island mainly through its sponsorship of regional dam safety workshops and its national annual conferences.

PROGRAM LIMITATIONS

STAFFING

Currently, the Dam Safety Program has a staff of 1.2 full time equivalents, consisting of one full time engineer/inspector, 0.1 supervisory and 0.1 administrative/clerical. To successfully meet the requirements of the current statute, DEM estimates one additional full time engineer/inspector is necessary.

FINANCIAL ASSISTANCE FOR REPAIRS

The Governor's Dam Safety and Maintenance Task Force concluded that repairs to bring all Rhode Island dams up to current safety standards could cost on average as much as \$800,000 per dam. Unfortunately, the state is not able to offer any financial assistance for these repairs. In many cases, the costs are so overwhelming that even if the state were to offer a repair loan, the owner could not afford to repay it. Creative financial assistance will be a key element for improving the condition of dams in the state.

The Governor and General Assembly recognized the need for financial assistance and enacted legislation to assist owners with the cost of dam repair. Legislation was enacted in 2001, authorizing the Clean Water Finance Agency to issue loans for projects associated with dam safety and in 2005 authorizing municipalities to create dam management districts to, among other things, collect funds for the maintenance and repair of dams.

INSPECTION LIMITATIONS

By law, DEM is required to cause to be inspected all the dams in the state. However, the visual inspections performed by the Dam Safety Program do not involve full engineering analyses of the structural integrity of dams. DEM does not have the staff or the financial resources to ensure that such inspections are completed. Although a visual inspection can provide indicators of underlying problems, an engineering analysis is needed to more fully assess the condition of the dam.

TECHNICAL GUIDANCE DOCUMENTS

As indicated above, DEM promulgated Dam Safety Regulations in December 2007. A next step will be to develop technical guidance documents for distribution to high and significant hazard dam owners. Such a document would assist the regulated community and consultants understand what is expected of a dam owner.

This completes the annual report on dam safety and the activities performed by DEM in 2007. For further information on the Dam Safety Program please contact David Chopy at (401) 222-1360.
