**SUBJECT: Compliance Groundwater Monitoring report**

Bay Spring Realty Company  
90 Bay Spring Avenue (Map 2/Lot 154)  
Barrington, Rhode Island  
RIDEM File No. SR-01-0106

Dear Mr. Noons:

On behalf of Bay Spring Realty Company, Resource Controls, a division of Environmental Strategies & Management, Inc. (Resource Controls) has prepared this Compliance Groundwater Monitoring Report for the property located at 90 Bay Spring Avenue, Barrington, Rhode Island (the Site) – RIDEM File No. SR-01-0106 (Former Case No. 2013-024). A Locus Map showing the location of the Site relative to regional geographic features is included as Attachment A, and a Site Plan including sample locations and relevant historic and current Site features is attached as Attachment B.

## FIELD ACTIVITIES

On July 6, 2016, groundwater was gauged to the nearest 0.01 foot using an electronic interface probe in monitoring wells MW-3, MW-5, MW-104, MW-105 and MW-106; and groundwater samples were collected from monitoring wells MW-3, MW-5, and MW-105. No light non-aqueous phase liquid (LNAPL) was detected. Fluid level measurements are summarized on the well monitoring form included in Attachment C. The inferred direction of groundwater flow is to the southeast (water table elevation contours modeled from the July 6, 2016 gauging event are included on the Site Plan – Figure 2/Attachment B). Groundwater samples were collected by low flow sampling methodology. The samples were collected in clean, preserved glassware, labeled in the field, placed on ice and submitted under standard chain-of custody protocol to ESS Laboratory (ESS) of Cranston, Rhode Island. The samples were analyzed for VOCs.

## ANALYTICAL RESULTS

Laboratory analysis of groundwater samples collected from MW-3, MW-5 and MW-105 indicated concentrations of VOC compounds above the laboratory reporting limits but below the RIDEM GA Groundwater Objectives. Trichloroethene was detected in MW-105 below the applicable RIDEM GA Groundwater Objectives. Since the RIDEM does not have promulgated groundwater standards intended to be protective of surface water, Resource Controls compared the TCE concentration to the Massachusetts Contingency Plan (MCP) Method 1 GW-3 Groundwater Standards (TCE – 5,000 ug/l). TCE concentrations at the Site in groundwater were reported below these standards.

The groundwater analytical results are summarized in Table 1 included as Attachment D, and a copy of the laboratory report is included in Attachment E.

Laboratory analytical results indicate that concentrations of contaminants detected in groundwater from each well are lower than previous sampling event conducted in March of 2016, with the exception of an increase in 4-Isopropyltoulene concentrations in MW-3. The RIDEM does not have promulgated GA Groundwater Standards for 4-isopropyltoulene.

## **CONCLUSIONS & RECOMMENDATIONS**

Based on the results of the July 7, 2016 groundwater gauging and sampling efforts, Resource Controls offers the following conclusions:

- Groundwater laboratory analytical results for the groundwater sampling event indicated the following:
  - Trichloroethene was detected in MW-105 below the RIDEM GA Groundwater Objectives, and below the MCP GW-3 Groundwater Standards (intended to be protective of surface water bodies).
  - Other VOC's detected in MW-3, MW-5 and MW-105 were detected above laboratory reporting limits, but below applicable RIDEM GA Groundwater Objectives.

Resource Controls does not suggest a change to the previously recommended remedial alternative – the implementation of engineering and institutional controls as a cost-effective remedial alternative that is in compliance with the intent of the RIDEM Remediation Regulations, is consistent with current and future land use, and manages actual and potential risks to human health and the environment. The institutional controls shall prohibit the construction of any buildings within the waterfront areas of the Site (75-foot CRMC Setback) in which residual VOC contamination has been identified in groundwater (the area of the former cistern and downgradient, and the area of MW-104 and MW-3 and downgradient), unless the proposed development/construction includes a RIDEM approved vapor intrusion mitigation technology (e.g. sub-slab depressurization system, vapor barriers, etc.).

Compliance groundwater monitoring for VOCs has been conducted in December 2015, March 2016 and July 2016. In accordance with the RIDEM Remedial Decision Letter dated May 27, 2016, three consecutive quarters have indicated VOC concentrations below RIDEM GA Objectives. As such, Resource Controls recommends the compliance groundwater monitoring be terminated.

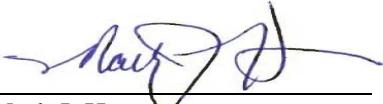

## LIMITATIONS

This report is not intended to guarantee that the Subject Property is or is not free from conditions, materials or substances that could adversely impact the environment or pose a threat to public health and safety. Rather, it is intended to be used as a summary of available information on existing conditions, the conclusions of which are based upon a reasonable review of information found in accordance with normally accepted industry standards and protocols, subject to and as limited by the scope and budget established with the client. Should further research on the Subject Property be warranted, Resource Controls must review any additional data obtained and the conclusions presented herein may be modified accordingly. Conclusions stated herein are based on the available information summarized herein and refer only to the specific Subject Property investigated. No warranty is implied or given and the report is subject to the agreement for the work, including the Standard Terms and Conditions attached to said agreement.

Please do not hesitate to contact the undersigned if additional information is needed.

Very truly yours,

**RESOURCE CONTROLS, a division of Environmental Strategies & Management, Inc.**

**CERTIFICATE OF ANALYSIS**

Benjamin Caswell  
Environmental Strategies & Management, Inc.  
474 Broadway  
Pawtucket, RI 02860-1377

**RE: Bay Spring Realty (7131A)**  
**ESS Laboratory Work Order Number: 1607048**

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this page, the entire report has been paginated. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard  
Laboratory Director

**REVIEWED**

**By ESS Laboratory at 10:29 am, Jul 13, 2016**

**Analytical Summary**

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration is frequently used instead of automated integration because it produces more accurate results.

The test results present in this report are in compliance with NELAC Standards, A2LA and/or client Quality Assurance Project Plans (QAPP). The laboratory has reviewed the following: Sample Preservations, Hold Times, Initial Calibrations, Continuing Calibrations, Method Blanks, Blank Spikes, Blank Spike Duplicates, Duplicates, Matrix Spikes, Matrix Spike Duplicates, Surrogates and Internal Standards. Any results which were found to be outside of the recommended ranges stated in our SOPs will be noted in the Project Narrative.

Client Name: Environmental Strategies & Management, Inc.  
Client Project ID: Bay Spring Realty

ESS Laboratory Work Order: 1607048

**SAMPLE RECEIPT**

The following samples were received on July 06, 2016 for the analyses specified on the enclosed Chain of Custody Record.

**The cooler temperature was not within the acceptance limit of <6°C, however, samples were delivered on ice.**

ESS Laboratory Work Order: 1607048

**Notes and Definitions**

U	Analyte included in the analysis, but not detected
CD+	Continuing Calibration %Diff/Drift is above control limit (CD+).
CD-	Continuing Calibration %Diff/Drift is below control limit (CD-).
B+	Blank Spike recovery is above upper control limit (B+).
ND	Analyte NOT DETECTED at or above the MRL (LOQ), LOD for DoD Reports, MDL for J-Flagged Analytes
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
LOD	Limit of Detection
LOQ	Limit of Quantitation
DL	Detection Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.
NR	No Recovery
[CALC]	Calculated Analyte
SUB	Subcontracted analysis; see attached report

**Additional Limitations**

## ADDITIONAL LIMITATIONS

1. The observations described in this Report were made under the conditions stated herein. The conclusions presented in the Report are based solely upon the services described therein and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by Client. The work described in the Report was carried out in accordance with our Proposal and Associated Statement of Standard Terms and Conditions.
2. In preparing the Report, Resource Controls has relied on certain information provided by state and local officials and other parties referenced therein and on information contained in the files of state and/or local agencies available to Resource Controls at the time of the site evaluation. Although there may have been some degree of overlap in the information provided by the various sources, Resource Controls did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment.
3. Observations and explorations were made of the site as indicated within the Report. Where access to portions of the site were unavailable or limited, Resource Controls renders no opinion as to the presence of hazardous materials, asbestos, lead paint or oil, or to the presence of indirect evidence relating to the same, in that portion of the site or structure. In addition, Resource Controls renders no opinion as to the presence of hazardous materials, lead paint, oil, PCBs or asbestos or to the presence of indirect evidence relating to hazardous materials, oil, lead paint or asbestos, where direct observation of the interior walls, floor, or ceiling of a structure on a site was obstructed by objects or coverings on or over these structures.
4. The purpose of this Report was to assess the characteristics of the subject site with respect to the possible presence in the environment of hazardous materials as defined within the project contract. No specific attempt was made to check the regulatory compliance of present or past owners or operators of the site with federal, state or local laws and regulations, environmental or otherwise.
5. Except as noted within the text of this Report, no quantitative laboratory testing was performed as part of this evaluation. Where such analyses have been conducted by an outside laboratory, Resource Controls has relied upon the data provided and has not conducted an independent third party evaluation of the reliability of this data.
6. Any chemical analyses performed for specific parameters during the course of studies have been used, in part, as a basis for determining the areas of environmental concern. Additional chemical constituents not searched for may be present at the site. Defined areas of environmental concern do not cover the potential additional constituents.
7. Governmental agencies' interpretations, requirements and enforcement policies may impact the type and scope of any site remediation required for a site. In addition, statutes, rules and regulations may be legislatively changed and inter-agency and intra-agency policies may be changed from present practice. If such changes occur, it may be necessary to re-evaluate their impact on the scope of any site remediation required.
8. Any water level readings made in the test pits, borings and/or wells and were made under the conditions stated on the logs. This data may have been reviewed and interpretations have been made in the text of this Report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall, temperature and other factors different from those prevailing at the time measurements were made.
9. Any and all cost estimates or opinions presented are based on Resource Controls opinion of most probable costs and are based on information available at the time of the estimate. Such estimates may vary from actual contract values based on many market and engineering variables beyond the control of Resource Controls. No warranty or guarantee is offered on the accuracy or validity of the estimates provided.
