**Re: Monthly Status Report-May 2005  
Former Gorham Manufacturing Facility  
333 Adelaide Avenue, Providence, RI  
Site Remediation Case No. 97-030**

Dear Mr. Martella:

Shaw Environmental, Inc. (Shaw) has prepared this monthly status report on behalf of Textron, Inc. (Textron). This status report is for the remediation of tetrachloroethene (PCE) contaminated groundwater at the former Gorham Manufacturing Facility at 333 Adelaide Avenue, Providence, Rhode Island (Figure 1).

PCE is the primary contaminant of concern for groundwater. As discussed in the Remedial Action Work Plan and subsequent revisions, the PCE source area in the vicinity of the former building W is the area of concern being treated, using an in-situ application of sodium permanganate, to achieve the site-specific remedial goal of 7,700 micrograms per liter (ug/L).

A revised RAWP was prepared by Shaw dated June 11, 2004 providing a final plan for the follow-on injection of sodium permanganate as part of the remediation of PCE contaminated groundwater. The Revised RAWP was approved by RIDEM in a letter dated July 27, 2004. The follow-on permanganate injections were started on September 28 and finished on October 4, 2004. Approximately 24,400 pounds of oxidant as sodium permanganate was applied to the treatment zone (Figure 2). This status report describes activities conducted in accordance with the approved Revised RAWP dated June 11, 2004.

## **FIELD ACTIVITIES**

The following field activities were conducted in May 9 and 10, 2005:

### Monitoring Activities

Field parameters were measured in treatment area wells on May 9 and 10, 2005. Field measurements included oxidation/reduction potential (ORP), dissolved oxygen (DO), pH, temperature, and specific conductance (SC). Groundwater elevation measurements were also collected. These results are presented in Tables 1 and 2.

### Groundwater Sampling

Groundwater samples were collected for analysis for volatile organic compounds (VOCs) (EPA Method 8260), chloride (EPA Method 300.0 Part A), and chemical oxygen demand (COD) (EPA Method 410.4) on May 9 and 10, 2005 from all 21 monitoring wells within the treatment area. Groundwater samples were also collected from five of the injection wells (04IN03, 04IN04, 04IS01, 04IS02, and 04IS04) for VOC analysis only. One duplicate sample was also collected. Four samples collected from the injection wells (04IN04, 04IS01, 04IS02, and 04IS04) exhibited the presence of permanganate (visual observation and measured with a colorimeter). These four samples were preserved with sodium thiosulfate. Groundwater samples were shipped to STL Westfield laboratory in Westfield, MA for analysis.

## **SUMMARY OF ANALYTICAL DATA**

A summary of the analytical data is contained in Table 3. The laboratory analytical report is attached to this report. The PCE concentration results for wells MW-101S, MW-201D, MW-202D and S, and 04IN03 are currently above the treatment goal of 7,700 ug/L.

## **FUTURE ACTIVITIES**

Field parameter measurements and groundwater sampling in the treatment area will continue on a quarterly basis. The samples collected in May 2005 constitute the second round of quarterly sampling. The next quarterly sampling event is scheduled to be conducted in August 2005.

Mr. Joseph T. Martella, II

## CERTIFICATIONS

The following certifications are provided pursuant to Rule 9.19 of the Remediation Regulations:

I, Edward P. Van Doren, as an authorized representative of Shaw Environmental, Inc. and the person responsible for the preparation of this Monthly Status Report dated June 21, 2005, certify that the information contained in this report is complete and accurate to the best of my knowledge.

  
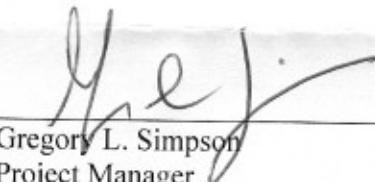

Edward P. Van Doren, PE, LSP  
Project Manager

6/23/05

Date:

We, Textron, Inc., as the party responsible for submittal of this Monthly Status Report, certify that this report is a complete and accurate representation of the contaminated site and the release, and contains all known facts surrounding the release, to the best of our knowledge.

Certification on behalf of Textron Inc.

  
Gregory L. Simpson  
Project Manager

DATA REPORTING QUALIFIERS AND TERMINOLOGY:

A number of data qualifiers are widely used within the environmental testing industry and may be utilized in our data reports. The majority of the qualifiers have evolved from the EPA Contract Laboratory Program (CLP).

REPORT COMMENTS:

All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Soil, sediment and sludge sample results are reported on a "dry weight" basis.

Reporting limits are adjusted for sample size used, dilutions and moisture content, if applicable.

The test results for the noted analytical method(s) meet the requirements of NELAC. Lab Cert.ID# 10843.

According to 40CFR Part 136.3, pH, Total Residual Chlorine and Dissolved Oxygen analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field analyses, they were not analyzed immediately, but as soon as possible on laboratory receipt.

Analytical result(s) reported as "ND" and/or "U", indicates the analyte was analyzed for but "Not Detected." Analytical result(s) reported as "TNTC" indicates that the microbiological test was "Too Numerous To Count."

GLOSSARY OF QUALIFIERS:

Inorganic Qualifiers (Q-column):

U Indicates that the analyte was analyzed for but not detected.

E Indicates an estimated value due to the presence of interference. When applied to GFAA analysis, indicates the one-point method of addition recovered between 40-85 percent.

B Indicates an estimated result value. The result was measured between the reporting limit and the method detection limit (MDL).

H Indicates the compound/element was found in both the sample and its associated laboratory blank. Indicates possible/probable blank contamination.

Organic Qualifiers (Q-column):

U Indicates that the compound was analyzed for but not detected.

J Indicates an estimated result value. This qualifier is used when mass spectral data indicated the presence of a compound that meets the identification criteria and the result is less than the specified quantitation limit, but greater than the method detection limit (MDL).

B Indicates that the compound was found in both the sample and its associated laboratory blank. Indicates possible/probable blank contamination and warns the data user to exercise caution when applying the results to this compound.

D Indicates all compounds identified in an analysis at a secondary dilution factor.

E Indicates that the compound in an analysis has exceeded the instrument linear calibration range.

**GLOSSARY OF TERMS:**

**Surrogates (Surrogate Standards):** An organic compound, which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but are not normally found in environmental samples. For semi-volatiles and pesticides/Arochlor, surrogate compounds are added to every blank, sample, matrix spike, matrix spiked duplicate, matrix spike blank (LCS), and standard. These compounds are used to evaluate analytical efficiency by measuring recovery. Poor surrogate recovery may indicate a problem with the sample composition.

**Internal Standard:** An organic compound, which is similar to the target analyte(s) in chemical composition and behavior in the analytical process. For GC/MS semi-volatiles and volatiles, internal standards are added to every blank, sample, matrix spike, matrix spike duplicate, matrix spike blank (LCS), and standard. Internal standard responses outside of established limits will adversely affect the quantitation and final concentration of target compounds.

**Matrix Spike (MS):** An aliquot of a sample (water or soil) fortified (spiked) with known quantities of specific compounds (target analytes) and subjected to the entire analytical procedure in order to indicate the appropriateness of the method for matrix interference by measuring recovery. The spiking occurs prior to sample preparation and analysis. Poor spike recovery may indicate a problem with the sample composition.

**Laboratory Control Sample (LCS):** An aliquot of analyte-free reagent water or sand fortified (spiked) with known quantities of specific compounds (target analytes) and subjected to the entire analytical procedure in order to indicate the appropriateness of the method efficiency.

**Blank:** An artificial sample of analyte-free water or solvent, designed to monitor the introduction of contaminates into the analytical process.

**Method Detection Limit (MDL):** The minimum concentration of an analyte or compound that can be measured and reported with 99% confidence that the result concentration is greater than zero.

**Petroleum Hydrocarbon Comments:**

The following comments are specific to Diesel Range Organics (DRO), by GC/FID:

Results for DRO are based on chromatographable portions of the petroleum product. The Carbon Range refers to the approximate chromatographic region covered by the specified petroleum product in straight-chain carbon units between C9-C36.

Quantitation is based on the average response factors for a series of hydrocarbons standards. The sample result from the DRO fraction is independent of the target compound assignment.

Samples yielding chromatographic patterns that do not agree with any of the method targets are reported as "unmatched".
