Re: Quarterly Report – 4th Quarter 2019  
Former Portsmouth Landfill

Dear Ms. McKenzie,

This Quarterly Report is submitted on behalf of AP Enterprise, LLC (APE) regarding the former Portsmouth Landfill (the Property). This report covers activities conducted during the period of October 1 to December 31, 2019.

**Construction Activities**

Construction activities during this reporting period consisted of:

- The delivery and management of newly accepted final capping soil; and
- Earth work associated with achieving the final grades per the RIDEM-approved capping plan.

Photos of the Property are attached as Appendix A.

**Soil Accepted**

The attached table summarizes the soils delivered to the Property during this reporting period. The supporting laboratory analysis data for the sites in Malden and Waltham, Massachusetts are enclosed on disk. The data for the sites in North Smithfield, Rhode Island, Boston, Massachusetts and East Bridgewater, Massachusetts were submitted previously.

Due to mis-communication amongst the project team, the facility accepted soils that are covered by Appendix A of the RIDEM Rules and Regulations for Composting and Solid Waste Management Facilities on December 5 and 12, 2019. The total amount accepted was 53 tons which was to complete material deliveries previously received from Departments of Public Works in Swampscott and Northborough, Massachusetts. These soils were immediately
covered with at least two feet of soil meeting the RIDEM Residential Direct Exposure Criteria in the same general area as the previously accepted material.

**Complaints**

No complaints were received directly by APE during this reporting period.

**Schedule**

The APE project team estimates that 99% of the landfill now has at least six inches of final cap soil on it. The volume of capping soil required to complete the landfill cap is driven by a number of variables, and is guided by the elevations in the approved final site grading plan. We expect to conduct a site topographic survey during the first quarter of 2020 to better estimate the status of the capping project.

**Monitoring**

The results of the January 2020 groundwater and landfill gas monitoring will be submitted under a separate cover in the near future.

Please feel free to contact me should you have any questions regarding this matter.

Sincerely

TIM O’CONNOR & COMPANY, LLC
