Re: *Remedial Summary Report – Response to Stormwater Release*
Former Tidewater Facility
200 Taft Street
Pawtucket, Rhode Island

Dear Messrs. Martella and Leo:

On behalf of our Client, The Narragansett Electric Company d/b/a National Grid (National Grid), GZA GeoEnvironmental, Inc. (GZA) is providing this letter report to summarize the remedial actions taken in response to the June 2, 2009 release of stormwater accumulated in a former gas holder at the former Tidewater Facility (Site). The Site was the location of the former Tidewater Manufactured Gas Plant (MGP) and the former Pawtucket No. 1 Power Station. The majority of the Site is currently vacant with the exception of an active natural gas regulating station, and active switching and electrical substations; both owned and operated by National Grid. The Site *Locus Plan* is provided as Figure 1. National Grid is currently completing a *Site Investigation* (SI) for the Site which has been assigned Case No. 95-022. A Site Plan showing the location of the gas holders and relevant Site features is included as Figure 2.

The release was verbally reported to the Rhode Island Department of Environmental Management (RIDEM) on June 2, 2009 and written notice was subsequently provided to you by Vanasse Hangen and Brustlin, Inc (VHB) on June 17, 2009. The release originated from a 3-inch threaded pipe stub at the base of Gas Holder No. 7. As reported by VHB, Clean Harbors Environmental Services (CHES) of East Providence, Rhode Island was contracted to respond to the release. On June 2, 2009, CHES stopped the discharge from the gas holder by installing a polyethylene ball valve on the leaking pipe stub. In addition, CHES used booms on the upland portion of the Site to contain the released water from discharging to the Seekonk River. At RIDEM's request, VHB collected samples for laboratory analysis of the released water and of a "brown floating emulsion" from a ponded area located between the tanks and the Seekonk River. The sample locations are as follows:

1. Sample "Gas Holder" was a release water sample collected 20-feet down gradient of the gas holder discharge point;
2. Sample "Upstream" was a background sample collected from the Seekonk River upstream of the point of release water entry;
3. Sample "Inflow" was a release water samples collected at the point of entry into the Seekonk River and

4. The sample "Scum" was collected from floating scum that accumulated at various locations where the release water ponded between the gas holders and the Seekonk River.

The results of the laboratory analysis are summarized in the attached Table 1. In addition, the chain-link-fence surrounding the Site was inspected by VHB. Breaches in the fence were repaired by Citiworks Inc. of Providence, Rhode Island (fence contractor) on June 4, 2009. It is unclear what caused the pipe stub to fail.

In response to the surface erosion caused by the release, during the week of June 17, 2009, National Grid's contractor, TFord of Georgetown, Massachusetts was on Site and completed the following work:

1. The washout area caused by the release immediately adjacent to Gas Holder No. 7 was filled with dense graded crushed stone (DGCS).
2. Areas of erosion within the access roads and parking area around the gas holders (approximately 23,000 square feet) were covered with a 6 oz non-woven geotextile and a 3 to 6 inch layer of DGCS compacted with a vibratory roller. The work was extended east toward the Seekonk River to approximately the Coastal Resource Management Councils (CRMC) 200-foot jurisdictional limit.
3. The brush around the gas holders was cleared and stock piled to limit the potential for vandalism.
4. Two additional pipe stubs with very small leaks were discovered on the base of Gas Holder No. 7. Both of these leaks were sealed and the pipe stubs were encapsulated in concrete.
5. A steel protective grate was fabricated and installed over the valve where the release occurred.

This phase of the Site work was documented by a GZA field representative. Representative photographs of the repair work performed are included in Attachment A.

While on Site observing the repair work by TFord, GZA noted that accumulated stormwater in Gas Holder No. 8 was intermittently overtopping on the southern side of the holder. At the time of the discovery, the discharge flow from the gas holder was estimated to be limited to approximately 0.5 gallons per minute. A sample labeled "No. 8 Gas Holder" was collected in a 5-gallon bucket by GZA. Water samples were then transferred to appropriate sample containers and submitted for laboratory analysis. Samples were analyzed for VOCs by EPA Method 8260, PAHs by EPA Method 8270, TPH by 8100, and RCRA 8 metals. The results of the analysis have been summarized in Table 1 and the laboratory certificates are attached as Appendix B. All samples collected by VHB and GZA contained low level detects of VOCs, SVOCs, TPH and metals.

As the gas holders were designed to capture stormwater to maintain seals between the rings, the gas holders have slowly filled with rainwater. Based on field measurements obtained on August 26, 2009, Gas Holder No. 8 was estimated to have approximately 0.25 to 0.33 feet of freeboard and Gas Holder No. 7 was estimated to have 10 to 11 feet of freeboard. To stop the accumulated storm water from overtopping Gas Holder No. 8, an interconnecting pipe between Gas Holder Nos. 7 and 8 was installed to allow for transfer of water between the two holders for water level equalization. The line was installed by welding a 4-inch gate valve onto each gas holder, bolting a 3-inch diameter hole saw apparatus to the valves and cutting a hole through the outer wall of the gas

holders. After the hole was cut, the hole saw apparatus was removed and a 4-inch steel line was installed between the valves. Refer to photographs in Appendix A. When the valves were opened, the water elevation in the gas holders equalized. Equalization of the water levels between the two holders was measured by GZA through pressure readings. Based on the pressure readings recorded on October 19, 2009, it is estimated that there is currently 3.5 to 4 feet of freeboard in each gas holder.

In addition to these response activities, GZA has performed weekly field visits since June 17, 2009 to document Site conditions which includes inspections of the former gas holders. To date, no other stormwater releases have occurred.

At this time National Grid is making preparations for the demolition of the gas holders. It has been proposed to RIDEM that the stormwater which has accumulated in the gas holders be treated on site and released to the Seekonk River. An application for a RIPDES General Permit was submitted to RIDEM on November 13, 2009 and a request for a Finding of No Significant Impact was submitted to the Coastal Resources Management Council on November 20, 2009. We anticipate the treatment and discharge of the stormwater to begin in January 2010 and be completed by April 2010.

We trust that this information meets your needs. Should you have any questions or require additional information, please do not hesitate to contact Meg Kilpatrick at (401) 421-4140 or Michele Leone at (781) 907-3651. Thank you for your attention to this matter.

Very truly yours,

This signed Certificate of Analysis is our approved release of your analytical results. These results are only representative of sample aliquots received at the laboratory. ESS Laboratory expects its clients to follow all regulatory sampling guidelines. Beginning with this Project Narrative, the entire report has been paginated. The ESS Laboratory Certifications sheet is the final report page. This report should not be copied except in full without the approval of the laboratory. Samples will be disposed of thirty days after the final report has been delivered. If you have any questions or concerns, please feel free to call our Customer Service Department.

Laurel Stoddard
Laboratory Director

Analytical Summary

The project as described above has been analyzed in accordance with the ESS Quality Assurance Plan. This plan utilizes the following methodologies: US EPA SW-846, US EPA Methods for Chemical Analysis of Water and Wastes per 40 CFR Part 136, APHA Standard Methods for the Examination of Water and Wastewater, American Society for Testing and Materials (ASTM), and other recognized methodologies. The analyses with these noted observations are in conformance to the Quality Assurance Plan. In chromatographic analysis, manual integration may be used instead of automated integration because it produces more accurate results. All ICP Metals were analyzed using the established linear dynamic range to determine acceptable analytical results.

ESS Laboratory certifies that the test results meet the requirements of NELAC, except where noted within this project narrative.

Sample Receipt

The following sample(s) were received on June 03, 2009 for the analyses specified on the enclosed Chain of Custody Record.

ESS Laboratory Work Order: 0906042

Notes and Definitions

U	Analyte included in the analysis, but not detected
S-	Surrogate recovery(ies) below lower control limit.
Q	Calibration required quadratic regression.
D+	Relative percent difference for duplicate is outside of criteria.
D	Diluted.
C-	Continuing Calibration recovery is below lower control limit.
B-	Blank Spike recovery is below lower control limit.
ND	Analyte NOT DETECTED above the detection limit
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
MDL	Method Detection Limit
MRL	Method Reporting Limit
I/V	Initial Volume
F/V	Final Volume
§	Subcontracted analysis; see attached report
1	Range result excludes concentrations of surrogates and/or internal standards eluting in that range.
2	Range result excludes concentrations of target analytes eluting in that range.
3	Range result excludes the concentration of the C9-C10 aromatic range.
Avg	Results reported as a mathematical average.

Subject: Project Name & Detection Limits
Follow Up Flag: Follow up
Flag Status: Completed

Liz,

The project name is "Tidewater". Please use the lowest detection limits possible.

Thanks,

Claude
