Appendix 7f. Rhode Island WAP Outreach Materials 19

Appendix 7a. RI DEM Administrative and Partner Framework

This appendix describes Rhode Island's overall wildlife conservation delivery system. The mission of the RI DEM is to preserve environmental quality, maintain the health and safety of the state's residents, and protect the natural systems of Rhode Island

(<http://www.dem.ri.gov/pubs/index.htm>). RI DEM works with many partners to enforce environmental laws, conduct research and develop solutions, and provide assistance (technical and financial) to individuals, businesses and municipalities. The RI DEM administers natural resource conservation through a series of Bureaus and Divisions, each tasked with a separate focus area. The three bureaus are the Bureau of Policy and Administration, the Bureau of Environmental Protection, and the Bureau of Natural Resources.

The Bureau of Policy and Administration contains the Division of Planning and Development, the Division of Strategic Planning and Policy, the Sustainable Watersheds Office, and other divisions (<http://www.dem.ri.gov/programs/bpoladm/index.htm>).

The Bureau of Environmental Protection consists of the Office of Air Resources, Office of Water Resources and Office of Waste Management (<http://www.dem.ri.gov/programs/benviron/index.htm>).

Finally, the Bureau of Natural Resources contains the Divisions of Agriculture, Coastal Resources, Fish and Wildlife, Forest Environment, and Parks and Recreation (<http://www.dem.ri.gov/programs/bnatres/index.htm>).

Bureau of Natural Resources, Division of Fish and Wildlife Programs

The Division of Fish and Wildlife contains three sections that each focus on different faunal groups – Freshwater Fisheries, Marine Fisheries, and Wildlife Management (<http://www.dem.ri.gov/programs/bnatres/fishwild/index.htm>).

The RI DEM has created an online, interactive Environmental Resource Map that shows the location and distribution of state-owned areas considered Open Space at <http://www.dem.ri.gov/maps/index.htm#GV>, almost all of which are administered within the Bureau of Natural Resources. The interactive map also illustrates the distribution of areas delineated as Scenic Areas, Industrial Development Potential, Historic Districts, Enterprise Zones, and rare species habitat.

Rhode Map RI

A recent initiative of Statewide Planning that has a specific wildlife component is *Rhode Map RI*. *Rhode Map RI* is a statewide, collaborative effort to bring all Rhode Island residents to the table to devise ways to improve Rhode Island's economy and livability with transportation, land use, and environmental protection strategies that creatively mobilize state and local assets.

As its name suggests, maps are one of the primary products of *Rhode Map RI*. Specifically, these maps identify important assets from both the built and natural environment (“Green Assets”). Seeing the great value in a partnership approach to identifying and protecting these assets, Statewide Planning incorporated extensive feedback from a team of resource professionals throughout RI DEM, The Nature Conservancy and the University of Rhode Island that resulted in the addition of a habitat component to the State’s Green Assets mapping.

Freshwater Fisheries Section

The Freshwater Fisheries Section of the Division of Fish and Wildlife is responsible for managing the state’s freshwater fisheries through public outreach, a trout-stocking program, and maintaining license and capture regulations for freshwater and anadromous fish in the state’s fresh waters (<http://www.dem.ri.gov/topics/fwtopics.htm>). Staff biologists regularly monitor the freshwater fish populations (e.g., juvenile shad, herring) in numerous streams, rivers, lakes and ponds. Freshwater Fisheries staff collaborate with the USFWS and other fisheries partners to restore anadromous fish runs to Rhode Island rivers and streams.

Marine Fisheries Section

The Marine Fisheries Section of the Division of Fish and Wildlife manages the state’s marine resources, including recreational and commercial fisheries (<http://www.dem.ri.gov/topics/mftopics.htm>). The program has developed management plans for the Finfish, Shellfish and Crustacean Fisheries and coordinates with the Atlantic States Marine Fisheries Commission (ASMFC), the National Marine Fisheries Service (NMFS) and the New England Fisheries Management Council (NEFMC) on the protection and management of numerous marine species

Wildlife Management Section

The Wildlife Management and Hunter Education Section of the Division of Fish and Wildlife manages the state’s wildlife hunting programs, educates hunters on safety issues, monitors harvested species populations, and educates the public on wildlife issues (<http://www.dem.ri.gov/topics/wltopics.htm>). The Section recently celebrated the 15 year anniversary of the Rhode Island Waterfowl Conservation Stamp Program, which has raised over \$1.2 million in support of waterfowl research, restoration and management in the state. Section staff were the lead agency in the compilation of this SWAP and coordinated with partners on its development through direct involvement of stakeholders on the RI WAP coordination team, public workshops, written correspondence, and a website (<http://www.dem.ri.gov/programs/bnatres/fishwild/swap15.htm>).

Bureau of Natural Resources, Division of Agriculture Programs

The Bureau’s Division of Agriculture manages an Animal Health Unit, operates a Mosquito Abatement Coordination Unit, markets and promotes the state’s agricultural products, oversees plant nurseries, enforces the proper use of pesticides and runs a Farmland Ecology Unit (<http://www.dem.ri.gov/programs/bnatres/agricult/index.htm>). The Farmland Ecology Unit is the most relevant Division of Agriculture program to the RI WAP, as it works with farmers to protect the state’s wetland and groundwater resources. The Division also partners with the U.S. Department of Agriculture’s Natural Resources Conservation Service (NRCS) to implement

agricultural preservation, restoration and enhancement programs (see the USDA section below, Table 7.3). The state has acquired the development rights to almost 4,000 acres of farmland through the Agricultural Land Preservation Program (RI DEM 2014).

Bureau of Natural Resources, Division of Coastal Resources Programs

The Division of Coastal Resources oversees the operation of Rhode Island's port at Galilee, several State Piers and waterfront property in Providence; altogether the Division manages 33 piers and docking facilities in the state

(<http://www.dem.ri.gov/programs/bnatres/coastal/index.htm>).

Bureau of Natural Resources, Division of Forest Environment Programs

The Division of Forest Environment is responsible for managing the state's forest resources, including more than 40,000 acres of state-owned forest areas (Appendix 7c). The Division maintains a statewide forest fire protection plan, provides assistance to rural volunteer fire departments, and conducts forest fire protection activities on state lands

(<http://www.dem.ri.gov/programs/bnatres/forest/index.htm>). The Rhode Island Forest Asset Management Plan was prepared by the Division of Forest Environment to comprehensively manage the state's forestry assets (RI DEM 2001). The Forest Environment Program also develops forest and wildlife management plans for private landowners seeking to protect fish and wildlife resources and forest habitats on their properties. The program also assists federal agencies in landowner assistance programs related to forest habitats and in monitoring the status of forestland in Rhode Island. Through the federal Forest Legacy Program, the Division partners with the U.S. Forest Service to acquire land or forestry interests (e.g., easements) for preservation, preventing forest fragmentation and conversion to non-forest uses (<http://www.dem.ri.gov/programs/bnatres/forest/flpinfo.htm>).

Bureau of Natural Resources, Division of Parks and Recreation Programs

The Division of Parks and Recreation manages approximately 15,000 acres of state parks, beaches, trails and bike paths throughout the state (RI DEM 2003n). Park and Recreation's managed lands protect important natural resources in the state while allowing for the public's recreational use and enjoyment of those resources (<http://www.riparks.com/>).

Other RI DEM Programs

Several other conservation programs are within the RI Department of Environmental Management and provide opportunities for enhanced coordination at the state level to implement the RI WAP. The Rhode Island Natural Heritage Program, the Sustainable Watersheds Office, and the Narragansett Bay Estuary Program in particular are existing partners with the Division of Fish and Wildlife in conserving the state's fish and wildlife resources and their habitats.

Rhode Island Natural Heritage Program

The Rhode Island Natural Heritage Program is housed in the Division of Planning and Development within the RI DEM

(www.dem.ri.gov/programs/bpoladm/plandev/heritage/index.htm). Established in 1978 as a collaboration between RI DEM and The Nature Conservancy (TNC), the Natural Heritage

Program maintains an inventory of the state's rare plants and animals. The Program also manages documentation of the state's rarest and most vulnerable natural features, management and stewardship needs, and threats to critical areas for fish and wildlife resources.

Sustainable Watersheds Office

The Sustainable Watersheds Office, housed under Bureau of Policy and Administration in the RI DEM, assists in the preparation and implementation of Watershed Action Plans, supports the Governor's Growth Planning Council and local communities on sustainable development that is economically and environmentally sound, and provides several natural resource and recreational programs to municipalities and organizations

(<http://www.dem.ri.gov/programs/bpoladm/suswshed/index.htm>). The Sustainable Watersheds Office undertakes habitat restoration projects, collaborating with partners to restore riparian buffers, eliminate invasive species, reduce impervious surfaces, and enhance environmental stewardship with businesses and local organizations. Under the name of the South County Technical Assistance Project (<http://www.dem.ri.gov/programs/bpoladm/suswshed/sctpap.htm>), RI DEM teamed up with the Rural Lands Coalition to offer communities technical planning assistance to explore new, creative ways to guide commercial and residential growth in a more environmentally-sensitive manner. The result of this project included the production of four documents; South County Design Manual, Model Land Use Ordinances, Rapid Site Assessment Guide, and Farm and Forest Protection Strategies, that demonstrate how communities may better plan for growth without compromising environmental quality and community character. The Scituate Reservoir Greenspace Project is a collaboration between RI DEM Sustainable Watersheds Office and the Providence Water Supply Board

(<http://www.dem.ri.gov/programs/bpoladm/suswshed/scitgsp.htm>). The project consists of assisting five communities of the Scituate River Watershed in identifying and prioritizing their important natural, cultural, and recreational resources. The result is a compilation of town-wide maps of potential conservation lands illustrating the areas identified as the most important priorities for protecting natural resources, highlighting a regional green space protection strategy.

Woonasquatucket River Riparian Buffer Project is a collaboration between the Sustainable Watersheds Office, the USFS and the Woonasquatucket River Watershed Council to restore the riparian buffer along the Woonasquatucket River

(<http://www.dem.ri.gov/programs/bpoladm/suswshed/rbdp.htm>), providing an opportunity for implementing RI WAP conservation actions in key habitats in this river corridor.

Other projects that fall under the Sustainable Watersheds Office include: Alternative Forest Businesses, Water Quality Restoration Projects, Stormwater Education and Resources, Woonasquatucket Greenspace Project, RI Forest Resource Management Plan, and the Narragansett Bay National Estuarine Research Reserve.

Narragansett Bay Estuary Program

The Narragansett Bay Estuary Program (NBEP), another component of the RI DEM, coordinates with the Coastal Resources Management Council (CRMC), non-profit organizations, and municipalities to identify coastal wetland restoration opportunities, prioritize those wetlands for restoration, and obtain funding to implement restoration (<http://www.nbep.org/>). The mission of

the NBEP is to preserve and protect Narragansett Bay by using partnerships to enhance water quality, conserve and restore the watershed's natural resources, and promote community involvement in both. The Program was established in 1985 by the federal government as one of four pilot projects to improve management of the nations' estuaries and bays; the program's success has led to the expansion of the federal program throughout the country. The NBEP collaborates with other agencies and states to implement the Narragansett Bay Comprehensive Conservation and Management Plan. The program has worked with partners to map and identify critical coastal resource areas, reduce the impacts of hazardous waste and non-point source pollution in the watershed, minimize nutrient pollution to the bay's waters, survey shellfish and dissolved oxygen in the bay, and establish a monitoring network throughout the bay. NBEP partners include the NASA, EPA, NRCS, USFWS, U.S. ACOE, Save the Bay, Brown University, the University of Rhode Island, Roger Williams University, the Commonwealth of Massachusetts and numerous municipalities. Conservation actions for SGCN and key habitats within the Narragansett Bay watershed may be implemented through the NBEP and its existing partnerships.

Appendix 7b. Rhode Island's WAP Process Development Plan and Schedule

This appendix depicts the SWAP process and the project flow chart of major steps identified in the process. It lays out the tasks and stages of Rhode Island's WAP process and lists the timeframe for completion and the key parties leading and/or involved with each stage. Timeframes are presented in quarterly intervals of the calendar year and represent actual completion times in the development process as well as anticipated completion targets for the implementation and revision processes.

RI DEM DFW took the lead in spearheading and coordinating the overall RI WAP. A consultant, Terwilliger Consulting Inc., assisted RI DEM DFW staff in the development of the process and product. The overall approach was to be as inclusive and comprehensive as possible. This RI WAP was viewed as an opportunity to inventory, poll, and coordinate with the wide array of existing public and private conservation programs and to further provide a common goal and direction for not only RI DEM DFW efforts, but for other public and private conservation efforts in Rhode Island.

The goal of this effort was to chart a course for comprehensive wildlife conservation in Rhode Island for the next decade. Notable objectives were to:

- Complete and approve the WAP by October 1, 2015, so implementation could begin;
- Develop a broader, more comprehensive and effective conservation strategy for wildlife species and habitats in Rhode Island using the SWG SWAP process;
- Develop broader and more effective public/stakeholder support and collaboration for wildlife conservation in Rhode Island;
- Provide for a coordinated, effective wildlife conservation delivery system in the state by charting a scientifically sound strategy supported by the conservation community and beyond; and
- To see implementation and integration of this plan by RI DEM and the conservation community at large.

APPENDIX 7b: RI's WAP PROCESS DEVELOPMENT PLAN AND SCHEDULE

SWAP Planning Process

The following table summarizes the planning process utilized throughout the development of Rhode Island's WAP and outlines the anticipated review and revision schedule for the next revision in 10 years.

TIMELINE	2012	2013				2014			2015
TASKS	4th Qtr	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr	1st Qtr	2nd Qtr	3rd Qtr	2015 thru 2025

Final Plan submitted								X	2025
Implementation, review, revision								X	Annual

Appendix 7c. List of Rhode Island's WAP Stakeholders/PAIs

This appendix lists Rhode Island's stakeholders that were contacted in the development of this SWAP and that will continue to be contacted with updates during its implementation and next revision. These stakeholders received either email, mail, phone or meeting requests for information and input on the development and implementation of Rhode Island's WAP (Elements 7 and 8). They were invited to attend the key workshops held to incorporate their input on SGCN, key habitat, threat and conservation action development. They were also periodically reminded to visit the web page to see updates.

Appendix 7d. Rhode Island WAP Public Input/Outreach Approach

This appendix summarizes the input plan that was designed for use in Rhode Island’s WAP process to contact Rhode Island’s stakeholders and public (Elements 7 and 8). The input plan identified different tiers of stakeholders and developed appropriate messages, methods, and objectives for each group. The Bleiker Citizen Participation by Objective (CPO) and Systematic Development of Informed Consent (SDIC) techniques and programs were used to develop this plan and they were consulted for follow up during this process in order to develop the most effective methods for outreach to the many “publics” or PAI’s (Bleiker and Bleiker 2000, <http://www.consentbuilding.com/>).

RI’s WAP Bleiker CPO/SDIC worksheet results: Contact Method Type of Promotion	Audiences Targeted			Target Dates during development of WAP and Continuation through implementati on of WAP Repeat for next revision 2025
	Tier 1 Stakeholders- DEM, Taxa Fed/state partners Collaborators Goal: Consult and collaborate	Tier 2 Stakeholders - Interested but limited investment Goal: Inform and involve	Tier 3 General Public Goal- Inform	
Direct Mail/email Fact sheets/ program material	Email, mail – begun 11/2011	Email, mail- begun 01/2012	Unique replies to email/mail	Quarterly (Same as website- see below)

APPENDIX 7d: OUTREACH APPROACH

Core Committee meetings DEM/agency internal memos- In-reach Expert/Taxa consultation/correspondence	X			Meeting- Every month monthly updates monthly emails minimum
Newsletters- put in org newsletters	X	X		Quarterly to every 6 months
Updates- 2016-2025 letters/emails/website	X	X	X	2x per year minimum
Magazine articles- DEM or state conservation orgs	X	X	X	Quarterly to every 6 months
Public relations: press releases	Quarterly X	X	X	Quarterly with website updates
Workshops	Jan '13 GCN/Hab Mar '13- Actions Jun '14- Prioritize Oct '14-Finalize	X	X	2 for Tier 1 possible invite to Tier 2
Exhibit /poster at Meetings	X	X		Every possible state meeting; set up traveling exhibit
DEM staff and partner briefing/report at all meetings possible	Distribute brochures, and updates	Distribute brochures, and updates	Distribute brochures , and updates	All meetings possible Develop schedule and list
Presentations to Tier 2 and 3 groups	X	X	X	As requested

The Citizen Participation by Objective (CPO) worksheet results identified the following specific techniques as the most effective to meet the communication objectives for the SWG SWAP: Open Meetings and Forums; Content-type Advice-Giving Advisory Committees, Existing Clubs, Groups Organizations and their newsletters; Existing School Systems and Institutions, and finally Electronic Bulletin Boards and Websites.

Appendix 7e. Rhode Island WAP Public Input Timeline and Tracking

This appendix outlines the approach for major workshops held during the WAP development process, each of which solicited input from stakeholders /public/partners at important phases of the document’s development. Although there were many Core and Technical Team meetings and workshops, the first Scientific Review Workshop was held on January 17, 2013, and solicited input on the selection of SGCN and key habitats. The second workshop was held on March 12, 2013, and focused on reviewing the threats and conservation actions identified in the draft document. These two workshops were analogous to the two held in 2004 and 2005 respectively for the first RI CWCS. New for the 2015 revision were the Taxonomic Expert Review and Prioritization Work Session held June 10, 2014 and the third and final Scientific Review Workshop for final review of SGCN and Key Habitat Conservation Actions on October 8, 2014. Appendix 7c lists the stakeholders invited to the three workshops, which were also announced on the web with information posted to allow participant preparation for these workshops. Follow up meetings /correspondence with participants provided for input and comments to be incorporated. Notices for and information from these meetings were posted on the web.

In great part due to the creation of the new RI WAP Community Liaison position, there was a high level of individual communications via email, phone, and in-person meetings. A list of most meetings, workshops, and correspondence is below. The information in this list is not inclusive of all outreach nor is it inclusive of all details of the listed events and correspondence. It is to be assumed that information or events available for the broader audience tiers were also available for more refined participant tiers.

Appendix 7f. Rhode Island WAP Outreach Materials

This appendix reprints the agendas for the first and last major workshops held during the WAP development process, to serve as examples of all such workshops, each of which solicited input from stakeholders/public/partners at important phases of the document's development. Also found here are three examples of outreach materials utilized during the revision process: Wildlife Quiz, Survey, and Flyer.

Agendas

Rhode Island's 2015 Wildlife Action Plan

January 17TH, 2013

Scientific Review Workshop Agenda

University of Rhode Island (URI), Kingston Campus
3rd Floor, Galanti Lounge, URI Library

---Identifying Species of Greatest Conservation Need & Key Habitats in RI---

Purpose: To provide information on the Rhode Island (RI) Wildlife Action Plan (WAP) and solicit expert input on RI's Species of Greatest Conservation Need (SGCN) and Key Habitats.

MORNING

8:30-8:45 a.m. Arrivals and Informal Coffee/Refreshments

8:45-9:45 a.m. Workshop Introduction

Welcome and Introduction to RI's WAP

- Welcoming remarks

WAP Process and Plan

- Approach to RI WAP development and SGCN and Key Habitats (background, regional context)
- Review of Agenda, Workshop Goals, and Instructions

9:45–11:30 a.m. Break-Out Session – Open Space Format

You are invited to visit each of the Topic Tables at your own pace. The following stations have been set-up to solicit your specific input and review of:

- Birds
- Fish
- Invertebrates
- Mammals
- Reptiles and Amphibians
- Key Habitats/Mapping
- 2015 RI WAP Process

PLEASE NOTE:

APPENDIX 7f: RI WAP OUTREACH MATERIALS

- ✓ We are interested in feedback within your field of expertise.
- ✓ Please review the draft SGCN and/or Key Habitats lists, and provide specific input to the representatives at the each table.
- ✓ Using the 2005 RI WAP SGCN and Key Habitats lists as a foundation, today's lists were updated by DEM staff, their partners, and a Technical Committee of various state taxa and habitat experts.
- ✓ Please make an effort to visit all tables, as your overall input is valuable to the process.

11:30 – 11:45 a.m. Next Steps

Wrap up of morning session and discussion of next steps.

12:00 – 12:45 p.m. Lunch and Learning Session

- Climate Change Presentation by Andrew Milliken, US Fish and Wildlife Service and North Atlantic Landscape Conservation Cooperative (LCC) Coordinator
- NE Synthesis Project Presentation by Steven Fuller, North Atlantic Landscape Conservation Cooperative (LCC) and WMI
- Follow-up questions and discussion

AFTERNOON

The afternoon session is for the SWAP Technical Committee to review the morning's input on species and habitat lists and further discuss threats and conservation actions.

1:00 – 1:30 p.m. Introduction to the goals of the afternoon SWAP Technical Committee session

1:30 – 3:00 p.m. Technical Committee Taxa and Habitats/GIS Teams meet to refine/finalize SGCN and Key Habitat lists, and discuss Threats and Conservation Actions

3:00 – 4:00 p.m. Group Discussion

Wrap-up and Next Steps

**2015 Rhode Island Wildlife Action Plan
Scientific Review Committee Workshop
Final Review of SGCN and Key Habitat Conservation Actions
URI Bay Campus, 215 S Ferry Rd, Narragansett, RI 02882
October 8, 2014**

Agenda 9 a.m. – Noon- Lunch Provided

Purpose: To provide a progress report on the RI WAP revision and solicit final input on the proposed actions to conserve SGCN species and key habitats and input into the RI WAP revision

9:00-9:15 a.m. Welcoming Remarks and Workshop Introduction

- Welcoming remarks
- Update on RI WAP Process and Timeline
- Review of Agenda and Workshop Objectives

9:15- 9:30 a.m. Overview of Actions and Threats identified for SGCN Species and Key Habitats

- Overview of the threats and conservation actions for SGCN and key habitats, etc.
- Clarifying Questions?

9:30- 10:30 a.m. Break out into topic stations and visit each taxa /habitat table to provide input

- *Visit Taxa tables*
Visit each taxa or habitat table and provide your comments to the taxa teams
Provide any updated information or comments you have.

Q and A

10:30-11:30 a.m. Overview and Discussion of Suggested RI WAP Conservation Opportunity Area Approach

The RI WAP uses a landscape conservation approach that uses information on species, habitats and threats to spatially depict areas that offer the best opportunities for SGCN conservation, also known as Conservation Opportunity Areas or COAs.

- Presentations

APPENDIX 7f: RI WAP OUTREACH MATERIALS

Kevin Ruddock (TNC) from the Key Habitats Team - summarizes the conservation approach including available maps (e.g., resiliency, connectedness, vulnerability, etc.)

Paul Jordan/Scott Millar (RIDEM) presentation on new Planning information and maps

Q and A

11:30-11:45 am **Update on Outreach to Municipalities and Conservation Organizations**
(e.g., land trusts)

Results from RI WAP outreach to municipalities and conservation organizations (e.g., land trusts) presented. Includes stakeholder input on how proposed plan elements interact with local processes and priorities, and what planning products and tools would be most useful to positively affect wildlife conservation in RI.

11:45 -12:00 pm **Wrap-up and Next Steps**

Lunch (*lunch will be provided*)

RHODE ISLAND WILDLIFE ACTION PLAN (RIWAP) SURVEY

We would **greatly appreciate** your filling out this brief survey. It will help us understand how we can best serve you and others in your city or town and throughout Rhode Island.

BACKGROUND

Every ten years, all US states and territories must publish a Wildlife Action Plan (WAP) to retain crucial federal funding for non-game species conservation. WAPs are strategic long-term conservation plans. The 2015 RIWAP update aims to help individuals and groups achieve their wildlife conservation (and by association, clean air and water and community preservation) goals. As a guidance document, RIWAP has no regulatory component. All participation is voluntary.

1. Please select the option that best describes your familiarity with RIWAP: not at all familiar with RI WAP
 somewhat familiar with/have read some portions of the plan very familiar with/have read the plan
2. What would help you/your group better understand and/or use the RIWAP document?
[Check all that apply]
 Training and/or presentations/webinars/teleconferences for my board/commission/organization/class
 Maps of conservation opportunity areas (important habitats, resources, etc.) in my community
 Examples from other municipalities of how to conserve species and habitats (e.g. strategies to incorporate conservation into existing plans, model ordinances, etc.)
 Informational packets/ electronic briefings for you or for distribution to organizations, students, or residents (i.e. simple things homeowners can do, assistance with understanding legislative/policy issues, etc.)
 Informal meetings with RIWAP Community Liaison on specific issues of concern to me/my community
 Updates on grants and other funding opportunities available to me/my community
 Other (*explain*)

Job title: _____

APPENDIX 7f: RI WAP OUTREACH MATERIALS

Municipality where you live/work: _____

(Optional) Please provide contact information and indicate your preferred means of communication. This will allow us to provide updates on appropriate technical and financial resources as they become available.

Name: _____ Email: _____
_____ Phone: _____
Address: _____

THANK YOU SO MUCH FOR YOUR TIME!

RI WAP Fact Sheet

Rhode Island's 2015 Wildlife Action Plan

Background: Making History

In 2005, Rhode Island's first-ever *Wildlife Action Plan* (RI WAP) was adopted by the Rhode Island Department of Environmental Management (RI DEM) and approved by the US Fish and Wildlife Service. It was part of an unprecedented national framework of similar plans by every U.S. state and territory that together presented a national action agenda for preventing wildlife from becoming endangered.

Rhode Island is home to almost 900 vertebrate wildlife species and an estimated 20,000 invertebrates spanning from the scenic coastline to its upland forests. Included in this natural diversity are a suite of mammal, bird, reptile and amphibian, fish and invertebrate species that the State has identified as in greatest conservation need.

2015 RI SWAP: Looking Ahead

By 2015, all states are required to update their original WAPs. RI DEM, with the assistance of the RI Chapter of The Nature Conservancy (TNC) and the University of Rhode Island (URI), is one of the first states to forge ahead towards its revision, which aims to:

- Reassess priority species and habitats; and provide more detailed mapping of priority conservation areas.
- Analyze threats affecting these fish and wildlife, including those posed from habitat loss, degradation, population growth, and climate change.
- Outline conservation actions to address or alleviate these threats and help effectively conserve RI's valuable wildlife resources.

By updating the WAP, RI DEM not only further develops its strategies to protect wildlife and habitats in the state, but also importantly qualifies for Federal State and Tribal Wildlife Grants (SWG). Established by Congress in 2000, the SWG program helps prevent wildlife from declining to the point of being endangered, with the goal to Keep Common Species Common.

Through this effort, RI DEM hopes to fund priority conservation efforts statewide and maintain RI's diverse natural landscape for its citizens and wildlife.

2015 RI SWAP: A Partnership Approach

A strong and unique partnership has been formed between the RI DEM and TNC to leverage financial resources and staff expertise for the 2015 RI WAP revision. This effort has been further enhanced by URI which is also providing project and technical assistance as a key member of the core team.

To support this collaboration, an organizational structure was created consisting of a:

- Core Steering Team
- Technical Committee
- Outreach Team
- Project liaison

to guide the project towards completion and provide planning and technical expertise.

Our approach has been to engage partners early to foster an inclusive, transparent process, and to promote ownership, and future support from a broader constituency in the RI WAP's implementation and funding.

2015 RI WAP: Process

Over the next two years, RI DEM will work with wildlife experts from throughout the state, as well as other key stakeholders, to develop a comprehensive plan that provides direction and coordination of wildlife conservation efforts in RI over the coming decade. This process includes:

- *Planning* the RI WAP's scope, objectives, and process.
- *Identifying* stakeholders, collaborators and partners; and soliciting their participation.
- *Researching* other conservation planning efforts in RI and beyond, as well as existing species and habitat databases and mapping tools.
- *Developing priorities* for species, habitats, and communities for conservation efforts.
- *Facilitating meetings* for staff, stakeholder, and public input.
- *Writing a plan* that allows for responsive adaptation, review and evaluation.

RI DEM has secured a conservation and communication consultant (TCI) to assist in developing an effective plan and process.

Your participation....

The RI WAP revision is an opportunity for you to help shape the direction of wildlife conservation in the State!

As we coordinate the best scientific data for the plan, lend your expertise & ideas.
