**Species of Greatest Conservation Need**

## Spotted Salamander

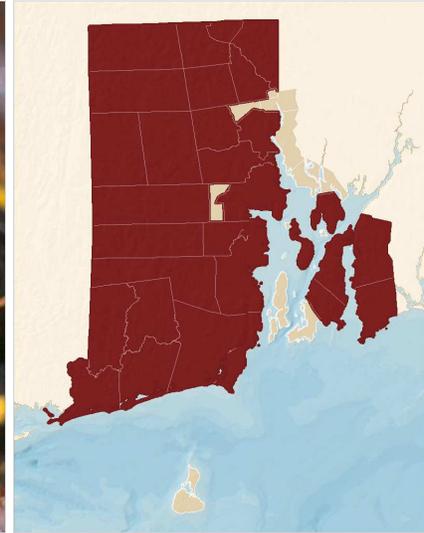

*Ambystoma maculatum*

HERPETOFAUNA

Amphibians

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### ***Distribution & Abundance***

This species is fairly widespread in the state and seems to have a better history of persistence in urban areas than nearly all other vernal pool amphibians. However, this species longevity may contribute to this perception of security and many isolated populations may already be in demographic stress. Several recent studies have shown this species to be sensitive to certain thresholds of forest canopy removal and other fragmentation processes. In addition to the habitats listed below, the spotted salamander also requires adjacent areas of upland forest as non-breeding habitat.

Habitat Community: Seeps, Springs, Vernal Pools, Type: Seeps, Springs, Vernal Pools

### ***Status***

SRANK: S4. GRANK: G5. NEPARC: MC Northeast comprises <50% of US distribution: > 25% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### ***Threats and Actions***

#### **Threat 1 - Residential and commercial development; Habitat soils make sites highly preferred by developers**

- Actions:
- *Site/area protection; Localized on the landscape. Rank: 3*
  - *Resource and habitat protection; Some breeding sites protected. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and species' life history, publish the Amphibians of Rhode Island. Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality in the migratory pathway**

- Actions:
- *Habitat and natural process restoration; Develop or facilitate passage through the landscape, modify road crossing areas, work with RI DOT. Rank: 3*

#### **Threat 3 - Dams and water management/use; Water withdrawal and water restrictions due to culverts**

- Actions:
- *Resource and habitat protection; Protect natural hydrology. Rank: 3*
  - *Habitat and natural process restoration; Restore natural hydrology, look for opportunities to modify culverts, work with RI DOT. Rank: 3*

#### **Threat 4 - Invasive and other problematic species and genes; Disease, bullfrogs, fish**

- Actions:
- *Awareness and communications; Educating the public about the threats of releasing bullfrogs. Rank: 3*

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

- *Compliance and enforcement; Enforcing regulations prohibiting sale of bullfrogs. Rank: 3*
- *Species management; Monitoring and management. Rank: 3*

**Threat 5 - Climate change and severe weather; Sea level rise and drying of breeding sites**

- Actions: • *Law and policy; Needed to address climate change. Rank: 3*

***Refer to the Community: Seeps, Springs, Vernal Pools, Type: Seeps, Springs, Vernal Pools - Habitat Profile for additional threats to this species.***

**Species of Greatest Conservation Need**

## Marbled Salamander

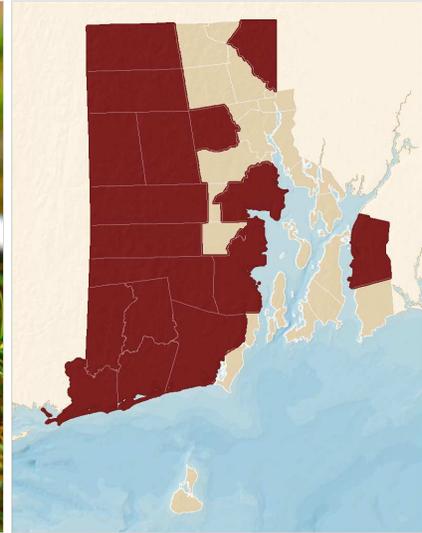

*Ambystoma opacum*

### HERPETOFAUNA

Amphibians

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

This species is localized in Rhode Island and are indicators of high-quality amphibian habitats. They are common in certain rural western and southern portions of the state in forested habitat tracts greater than 400 hectares in extent. In addition to the habitats listed below, the marbled salamander also requires adjacent areas of upland forest as non-breeding habitat.

Habitat Community: Seeps, Springs, Vernal Pools, Type: Seeps, Springs, Vernal Pools

### **Status**

IUCN Rank: LC. SRANK: S2. GRANK: G5. RSGCN: L-H. PARC: 1. CODES: RES. Res/B: 1. GRP: 1. PRIOR: 1.  
NEPARC: HC Northeast comprises <50% of US distribution: > 50% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Residential and commercial development; Habitat soils make sites highly preferred by developers**

- Actions:
- *Site/area protection; Localized on the landscape; some breeding sites protected. Rank: 3*
  - *Resource and habitat protection; Wherever possible, 'soft' approaches (such as beach nourishment, vegetative plantings, and placement of large woody debris) to shoreline modifications should be used. Rank: 1*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and species' life history, publish the Amphibians of Rhode Island. Rank: 3*
  - *Land/water management; Identify priority parcels to retain as core forest areas with minimal management. Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality in the migratory pathway**

- Actions:
- *Habitat and natural process restoration; Develop or facilitate passage through the landscape, modify road crossing areas, work with RI DOT. Rank: 3*

#### **Threat 3 - Dams and water management/use; Water withdrawal and water restrictions due to culverts**

- Actions:
- *Resource and habitat protection; Protect natural hydrology. Rank: 3*
  - *Habitat and natural process restoration; Restore natural hydrology where possible, look for opportunities to modify culverts, work with RI DOT. Rank: 3*

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

**Threat 4 - Invasive and other problematic species and genes; Disease, bullfrogs, fish**

- Actions:*
- *Awareness and communications; Educating the public about the threat of releasing bullfrogs. Rank: 3*
  - *Compliance and enforcement; Enforcing regulations prohibiting sale of bullfrogs. Rank: 3*
  - *Species management; Monitoring and management. Rank: 3*

**Threat 5 - Household sewage and urban waste water; Road runoff**

- Actions:*
- *Site/area management; Protect the habitat from road run-off, work with RI DOT to limit salt use in habitat areas. Rank: 3*

**Threat 6 - Climate change and severe weather; Sea level rise and drying of areas due to droughts**

- Actions:*
- *Law and policy; Needed to address climate change. Rank: 3*

**Threat 7 - Residential and commercial development; Loss of breeding habitat for amphibians**

- Actions:*
- *Habitat and natural process restoration. Rank: 1*

***Refer to the Community: Seeps, Springs, Vernal Pools, Type: Seeps, Springs, Vernal Pools - Habitat Profile for additional threats to this species.***

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

## Fowler's Toad

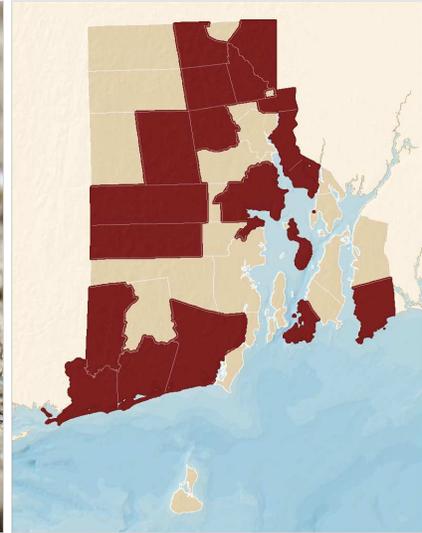

*Anaxyrus fowleri*

HERPETOFAUNA

Amphibians

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

Rhode Island is near the northern limit of this species range and their distribution is discontinuous. The core of the Fowler's Toad range is within Kent County, where habitats are threatened by ORV use and water withdrawals. Other coastal populations are small and vulnerable to rising sea level. Fowler's toads breed either in permanent wetlands or very shallow wetlands. Both systems can be affected by invasive species (primarily fish and bullfrogs) and changing hydrology. Dry sandy upland habitats used during the non-breeding season are degraded by ORV use.

Habitat Community: Pitch Pine Woodland/Barren, Type: Barren

### **Status**

IUCN Rank: LC. SRANK: S3. GRANK: G5. RSGCN: L-H. PARC: 1. CODES: RES. Res/B: 1. GRP: 7. PRIOR: 1.  
NEPARC: HC Northeast comprises <50% of US distribution: > 50% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Housing and urban areas; Preferred sandy soil type is also preferred by developers**

- Actions:
- *Site/area protection; Localized on the landscape; some breeding sites protected. Rank: 3*
  - *Resource and habitat protection; Wherever possible, 'soft' approaches (such as beach nourishment, vegetative plantings, and placement of large woody debris) to shoreline modifications should be used. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and species' life history, publish the Amphibians of Rhode Island. Rank: 3*
  - *Habitat and natural process restoration; Construct and maintain new amphibian breeding habitat (seasonal pond project). Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality in the migratory pathway**

- Actions:
- *Habitat and natural process restoration; Restore habitat where possible. Rank: 3. Species management*

#### **Threat 3 - Dams and water management/use; Water withdrawal**

- Actions:
- *Site/area protection; Protect natural hydrology. Rank: 3*

**DRAFT Rhode Island Wildlife Action Plan Species Profiles**  
**Species of Greatest Conservation Need**

- *Site/area management; Restore natural hydrology where possible. Rank: 3*

**Threat 4 - Recreational activities; ORV use**

- Actions:
- *Site/area management; Fencing to protect habitat from ORV use. Rank: 3. Species management*
  - *Awareness and communications; Need to educate the public about the threat of ORVs in the habitat. Rank: 3*
  - *Compliance and enforcement; Need for ORV restrictions in habitat. Rank: 3*

**Threat 5 - Invasive non-native/alien species; Release of non-native bullfrogs, fish predation of eggs and larvae, disease**

- Actions:
- *Awareness and communications; Educating the public about the threat of releasing bullfrogs. Rank: 3*
  - *Compliance and enforcement; Enforcing the regulations prohibiting the sale of bullfrogs. Rank: 3*
  - *Species management; Monitoring and management. Rank: 3*

**Threat 6 - Household sewage and urban waste water; Road run-off, road salt**

- Actions:
- *Site/area management; Protect the habitat from road run-off, work with RI DOT to limit salt use in habitat. Rank: 3*
  - *Species management. Rank: 3*

**Threat 7 - Climate change and severe weather; The drying of breeding areas due to drought, sea level rise**

- Actions:
- *Policies and regulations; Needed to address climate change. Rank: 3*

**Threat 8 - Natural system modifications; Loss of habitat from plant succession**

- Actions:
- *Data collection and analysis; Identify priority parcels needing serial-stage management. Rank: 3*
  - *Species management; Manage important habitats as required. Rank: 3*

**Species of Greatest Conservation Need**

## Northern Dusky Salamander

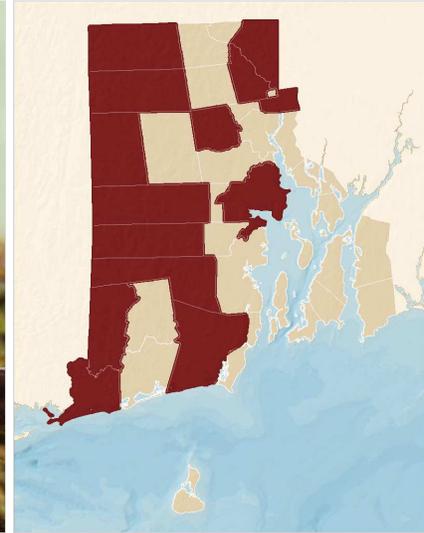

*Desmognathus fuscus*

HERPETOFAUNA

Amphibians

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

Populations of this species are scattered in southern and coastal Rhode Island but relatively common streamside inhabitant in the northwestern highlands. This semi-aquatic species depends on ground water inputs to streams and cold-water habitats, where they are often found with Brook Trout. Coastal populations are localized and at risk because of changing hydrology and stream scarification and fragmentation.

Habitat Community: Seeps, Springs, Vernal Pools, Type: Seeps, Springs, Vernal Pools

### **Status**

IUCN Rank: LC. SRANK: S4. GRANK: G5. RSGCN: H-L. PARC: 1. CODES: RES. Res/B: 1. GRP: 3. PRIOR: 1.  
NEPARC: LC Northeast comprises >50% of US/Canada distribution: < 25% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Housing and urban areas; Degradation of streams, negatively modified near developed areas**

- Actions:
- *Site/area protection; Localized on the landscape. Rank: 3*
  - *Resource and habitat protection; Species depends on groundwater seepage. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and species' life history, publish the Amphibians of Rhode Island. Rank: 3*
  - *Planning; Identify priority parcels to retain as core forest areas with minimal management. Rank: 3*

#### **Threat 2 - Household sewage and urban waste water; Road runoff, siltation, road salt, scarification of streambeds**

- Actions:
- *Resource and habitat protection; Protect the habitat from road run-off, work with RI DOT to limit salt use in habitat areas. Rank: 3*
  - *Research, survey, inventory, monitor habitats; Assess effects of stream bank disturbance. Rank: 2*

#### **Threat 3 - Dams and water management/use; Water withdrawal and water restriction due to culverts**

- Actions:
- *Resource and habitat protection; Protect natural hydrology especially groundwater seepage. Rank: 3*

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

- *Habitat and natural process restoration; Restore natural hydrology especially groundwater seepage, look for opportunities to modify culverts, work with RI DOT. Rank: 3*

**Threat 4 - Climate change and severe weather; Sea level rise and drying of breeding sites with drought**

- Actions:* • *Policies and regulations; Needed to address climate change. Rank: 2*

**Threat 5 - Invasive non-native/alien species; Disease**

- Actions:* • *Species management; Monitoring and management. Rank: 1*

**Species of Greatest Conservation Need**

## Northern Spring Salamander

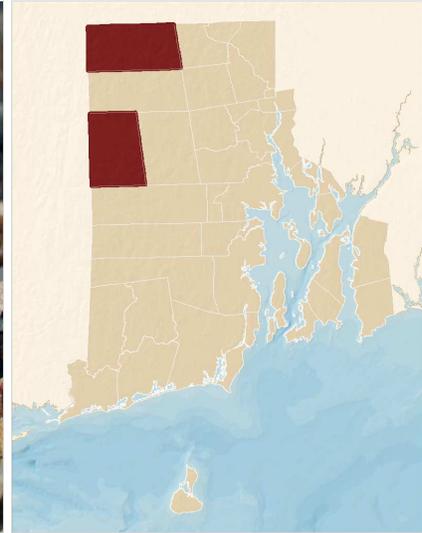

*Gyrinophilus porphyriticus porphyriticus*

HERPETOFAUNA

Amphibians

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

This species is uncommon and has a restricted distribution and localized habitat in Rhode Island. Of the four current sites in northwestern Rhode Island where it is known to occur only two sites are protected. This species occurs in small streams where there are ample inputs of cold groundwater. Loss of forest cover, stream scarification, and contamination are the principal threats.

Habitat Community: Seeps, Springs, Vernal Pools, Type: Seeps, Springs, Vernal Pools

### **Status**

STSTAT: C. SRANK: S1. GRANK: G5. RSGCN: H-M. NALCC: X. PARC: 1. CODES: RES. Res/B: 1. GRP: 4. PRIOR: 1. NEPARC: MC Northeast comprises >50% of US/Canada distribution: > 25% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Housing and urban areas; Degradation of streams, negatively modified near developed areas**

- Actions:*

### **Distribution & Abundance**

It is difficult to confidently assign a status as there are more than 50 known localities in the state. Populations are clearly localized within the landscape but are secure on some protected and conservation properties.

Habitat Community: Forested Swamp, Type: Red Maple Swamp

### **Status**

IUCN Rank: LC. SRANK: S3. GRANK: G5. PARC: 1. CODES: RES. Res/B: 1. GRP: 5. PRIOR: 1. NEPARC: MC  
Northeast comprises <50% of US distribution: > 25% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Housing and urban areas; Loss of habitat**

- Actions:
- *Site/area protection; Localized migratory species. Rank: 3*
  - *Resource and habitat protection; Some evidence for persistence in suburban areas. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and species life history, publish the Amphibians of Rhode Island. Rank: 3*
  - *Data collection and analysis; Identify priority parcels to retain as core forest areas with minimal management. Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality in the migratory pathway**

- Actions:
- *Habitat and natural process restoration; Develop or facilitate passage through the landscape, modify road crossing areas, look for opportunities to modify culverts, work with RI DOT. Rank: 3*

#### **Threat 3 - Dams and water management/use; Water flow can be restricted by culverts**

- Actions:
- *Resource and habitat protection; Protect breeding wetlands, maintain existing hydrology, no dry outs or diverting stormwater to wetlands. Rank: 3*
  - *Habitat and natural process restoration; Enhance degraded habitat where possible. Rank: 3*
  - *Habitat and natural process restoration; Construct and maintain new amphibian breeding habitat (seasonal pond project). Rank: 1*

#### **Threat 4 - Invasive non-native/alien species; Disease**

- Actions:
- *Species management; Monitoring and management. Rank: 3*

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

**Threat 5 - Droughts; The drying of breeding sites due to drought**

*Actions:* • *Policies and regulations; Needed to address climate change. Rank: 3*

**Threat 6 - Residential and commercial development; Loss of riparian vegetation, fringe wetlands due to shoreline development, bulkheads, and poor urban development**

*Actions:* • *Site/area protection; Wherever possible, 'soft' approaches (such as beach nourishment, vegetative plantings, and placement of large woody debris) to shoreline modifications should be used. Rank: 1*

***Refer to the Community: Forested Swamp, Type: Red Maple Swamp - Habitat Profile for additional threats to this species.***

**Species of Greatest Conservation Need**

## Northern Leopard Frog

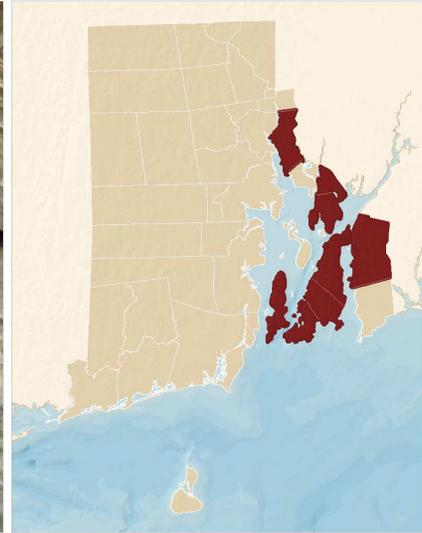

HERPETOFAUNA

Amphibians

*Lithobates pipiens*

Photo: J. Christopher Powell

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

This species is one of Rhode Island's most threatened amphibians because populations are extremely localized geographically and occur within rapidly developing landscapes. Road mortality has been an issue at many sites and the success of wildlife tunnels at one locality has not been determined. Breeding sites are ephemeral or semi-permanent ponds. Alternate habitats include wet meadows and marshes

Habitat Community: Shrub Swamp/Wet Meadow, Type: Shrub Swamp/Wet Meadow

### **Status**

IUCN Rank: LC. STSTAT: C. SRANK: S2. GRANK: G5. RSGCN: L-H. PARC: 1. CODES: RES. Res/B: 1. GRP: 8. PRIOR: 1. NEPARC: HC Northeast comprises <50% of US distribution: > 50% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Agriculture and aquaculture; Upland habitat highly developed for agriculture**

- Actions:
- *Site/area protection; Large landscape species; also wherever possible, 'soft' approaches (such as beach nourishment, vegetative plantings, and placement of large woody debris) to shoreline modifications should be used. Rank: 3*
  - *Resource and habitat protection; Breeding sites not protected. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect wetlands and associated upland habitats. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect wetlands and associated uplands. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and species' life history, publish the Amphibians of Rhode Island. Rank: 3*
  - *Data collection and analysis; Research abundance and distribution of species for which status and habitat can be determined, by including additional data collection in present studies. Rank: 3*

#### **Threat 2 - Agricultural and forestry effluents; Pollution in breeding habitats from agriculture**

- Actions:
- *Site/area management; Requires hayfields or grazing or mowing regimes, work with farmers. Rank: 3*

#### **Threat 3 - Dams and water management/use; Water withdrawal and water restrictions due to culverts**

- Actions:
- *Resource and habitat protection; Protect natural hydrology. Rank: 3*

**DRAFT Rhode Island Wildlife Action Plan Species Profiles**  
**Species of Greatest Conservation Need**

- *Habitat and natural process restoration; Restore natural hydrology where possible, look for opportunities to modify culverts, work with RI DOT. Rank: 3*

**Threat 4 - Invasive non-native/alien species; Disease**

- Actions:* • *Species management; Monitoring and management. Rank: 3*

**Threat 5 - Droughts; Drying of breeding sites**

- Actions:* • *Policies and regulations; Needed to address climate change. Rank: 3*

**Threat 6 - Natural system modifications; Loss of habitat from plant succession**

- Actions:* • *Data collection and analysis; Identify priority parcels needing serial-stage management, especially for Lepidoptera habitat. Rank: 3*
- *Species management; Manage important habitats as required. Rank: 3*
  - *Habitat and natural process restoration; Construct and maintain new amphibian habitat, and breeding habitat (seasonal pond project). Rank: 3*

**Threat 7 - Lack of information; Lack of information from research to address habitat and taxonomic issues**

- Actions:* • *Data collection and analysis; Assess taxonomy/population relationships. Rank: 2*

***Refer to the Community: Shrub Swamp/Wet Meadow, Type: Shrub Swamp/Wet Meadow - Habitat Profile for additional threats to this species.***

**Species of Greatest Conservation Need**

## Wood Frog

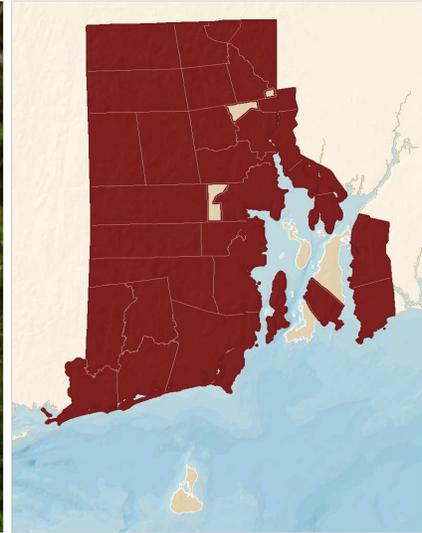

*Lithobates sylvaticus*

HERPETOFAUNA

Amphibians

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

This species is widespread in western and northern Rhode Island. However, near coastal areas and near human population centers this species is declining due to habitat loss and fragmentation. Several studies have shown that wood frog populations can be affected by loss of forest cover and other fragmentation processes. This is good indicator of the health of wildlife preserves. Breeding habitat is vernal ponds or semi-permanent pond. Alternate habitats include Red Maple Swamp and various forest types.

Habitat Community: Forested Swamp, Type: Red Maple Swamp

### **Status**

IUCN Rank: LC. SRANK: S5. GRANK: G5. PARC: 1. CODES: RES. Res/B: 1. GRP: 9. PRIOR: 1. NEPARC: LC  
Northeast comprises >50% of US/Canada distribution: < 25% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Residential and commercial development; Habitat soils make sites highly preferred by developers**

- Actions:

*Scaphiopus holbrookii*

### HERPETOFAUNA

Amphibians

Photo: Jay Osenkowski

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

Currently this species is known from only a few Island localities. This species has a very unusual breeding habitat that is not protected by existing regulations. It seems to be vulnerable to habitat fragmentation. No population presently known on protected land. Breeding habitat is very shallow ephemeral wetlands. Alternate habitat consists of dry forests, including Pitch Pine Woodland/Barrens.

Habitat Community: Pitch Pine Woodland/Barren, Type: Pitch Pine Woodland

### **Status**

IUCN Rank: LC. STSTAT: SE. SRANK: S1. GRANK: G5. RSGCN: L-VH. PARC: 1. CODES: RES. Res/B: 1. GRP: 6. PRIOR: 1. NEPARC: SC Northeast comprises <50% of US distribution: > 75% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Housing and urban areas; Preferred sandy soil type is also preferred by developers**

- Actions:
- *Site/area protection; Area sensitive species, requires large landscape with multiple breeding sites. Rank: 3*

## Spotted Turtle

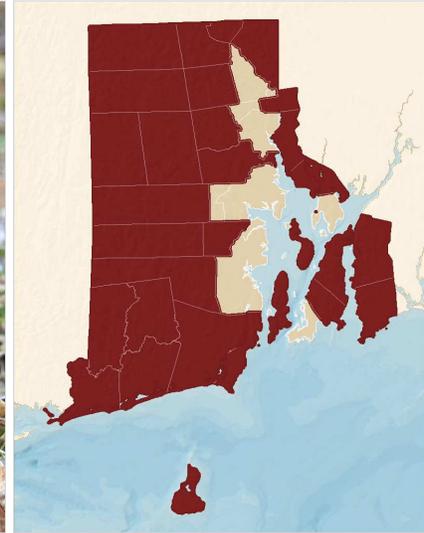

*Clemmys guttata*

### HERPETOFAUNA

Reptiles

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

The Spotted Turtle is widespread and locally common in Rhode Island. As with most large reptiles, loss of adults via road mortality, collection, or predation is the most significant threat to populations. Primary wetland habitats are vulnerable to hydrological changes and succession, and breeding habitat also requires management.

Habitat Community: Coastal Plain Peatlands, Type: Graminoid Fen

### **Status**

IUCN Rank: EN. OTSTAT: P. SRANK: S5. GRANK: G5. RSGCN: L-VH. NALCC: X. PARC: 1. CODES: RES. Res/B: 1. GRP: 1. PRIOR: 1. NEPARC: SC Northeast comprises <50% of US distribution: > 75% of states listed in WAP. Climate Change Vulnerability: 2030 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Housing and urban areas; Localized species with a specialized habitat, affected by habitat loss**

- Actions:*
- *Research, survey, inventory, monitor populations; Determine metapopulation structure. Rank: 3*
  - *Resource and habitat protection; Some habitat not protected. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and the species' life history, publish the Reptiles of Rhode Island. Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality**

- Actions:*
- *Habitat and natural process restoration; Develop or facilitate passage through the landscape, modify road crossing areas, work with RI DOT. Rank: 3*

#### **Threat 3 - Hunting and collecting terrestrial animals; Take of species from the wild (human)**

- Actions:*
- *Awareness and communications; Need to educate the public about the damage that removal from the wild can do to the population. Rank: 3*
  - *Compliance and enforcement; Enforce compliance. Rank: 3*

#### **Threat 4 - Human intrusions and disturbance; Moving turtles from original habitat (human)**

## Wood Turtle

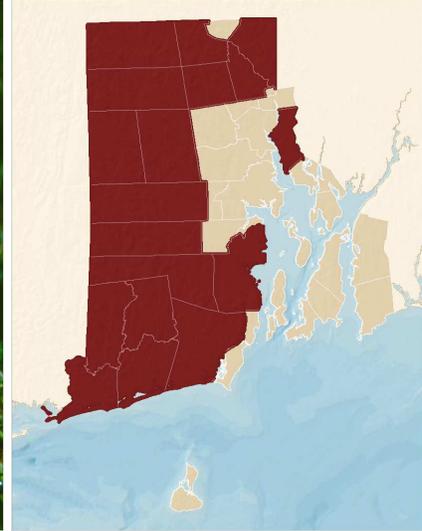

*Glyptemys insculpta*

### HERPETOFAUNA

Reptiles

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

The wood turtle is widespread but uncommon and is found primarily in areas west of Narragansett Bay. As with most large reptiles, loss of adults via road mortality, collection, or predation is the most significant threat to populations. Primary wetland habitats are vulnerable to hydrological changes and contamination, and breeding habitat also requires management. The wood turtle resides in clear, permanent streams during the winter and in their associated floodplains and various terrestrial habitats during the summer. They utilize open, scarified areas for egg-laying.

Habitat Community: River

### **Status**

## Northern Diamond-backed Terrapin

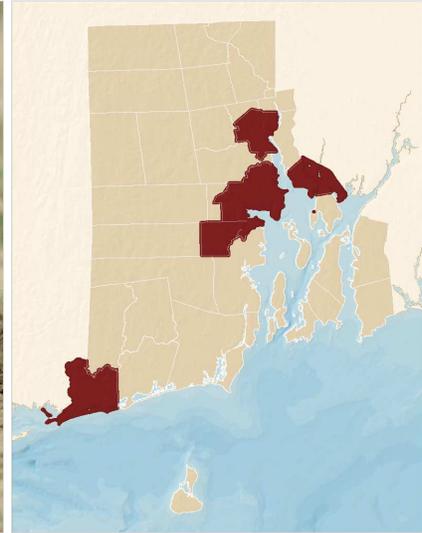

HERPETOFAUNA

Reptiles

*Malaclemys terrapin terrapin*

Photo: Peter Paton

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

The Northern diamond-backed terrapin is Rhode Island's only reptile that inhabits brackish water. This species is extremely localized in the state, with one large population known and perhaps other smaller outliers. Like most large reptiles, this species is especially vulnerable to loss of adults through propeller strikes and fishing (especially pot fisheries) bycatch. Predation of eggs and young by subsidized predators is another issue. The single existing large population is well managed and monitored but there could be other conservation action directed to outlying areas. Their nesting habitat is sand barrens and beaches near tidal waters.

Habitat Community: Tidal Salt Marsh, Type: Low Salt Marsh; High Salt Marsh; Salt Panne; Salt Scrub

### **Status**

IUCN Rank: NT. SRANK: S1. GRANK: G4. RSGCN: H-VH. PARC: 1. CODES: RES. Res/B: 1. GRP: 3. PRIOR: 1. NEPARC: SC Northeast comprises >50% of US/Canada distribution: > 75% of states listed in WAP. Climate Change Vulnerability: 2050 (Temperature change)

### **Threats and Actions**

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

The rat snake only occurs in a limited area of Rhode Island and is considered to be at the periphery of its range here. However, like most large snakes, it is vulnerable to increased mortality of adults via auto traffic. Public information would help to mitigate the loss of adults. They use ledges and outcrops for den sites and basking.

Habitat Community: Oak Forest, Type: Oak Forest

### **Status**

STSTAT: C. SRANK: S2. GRANK: G5. PARC: 1. CODES: RES. Res/B: 1. GRP: 5. PRIOR: 1. NEPARC: MC  
Northeast comprises <50% of US distribution: > 25% of states listed in WAP. Climate Change Vulnerability: 2100

### **Threats and Actions**

#### **Threat 1 - Residential and commercial development; Uses early successional habitat, developable land**

- Actions:
- *Research, survey, inventory, monitor populations; Determine metapopulation structure. Rank: 3*
  - *Land/water protection; Area sensitive species, and some habitat not protected. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and the species' life history, publish the Reptiles of Rhode Island. Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality**

- Actions:
- *Habitat and natural process restoration; Develop or facilitate passage through the landscape, modify road crossing areas, work with RI DOT. Rank: 3*

#### **Threat 3 - Human intrusions and disturbance; Persecution of snakes by humans**

- Actions:
- *Awareness and communications; Need to educate the public about the species' value and life history, publish the Reptiles of Rhode Island. Rank: 3*

#### **Threat 4 - Hunting and collecting terrestrial animals; Take of species from the wild (human)**

- Actions:
- *Awareness and communications; Need to educate the public about the damage that removal from the wild can do to the population. Rank: 3*
  - *Compliance and enforcement; Enforce compliance. Rank: 3*

#### **Threat 5 - Invasive non-native/alien species; Disease**

- Actions:
- *Species management; Monitoring and management. Rank: 2*

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

- *Ex situ conservation; Headstart and captive breeding. Rank: 1*

***Refer to the Community: Oak Forest, Type: Oak Forest - Habitat Profile for additional threats to this species.***

## Eastern Box Turtle

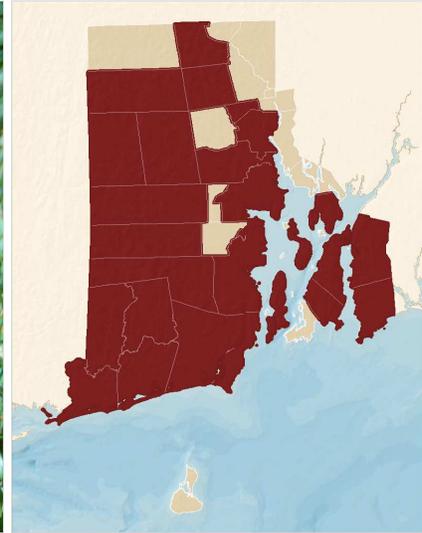

*Terrapene carolina carolina*

### HERPETOFAUNA

Reptiles

Photo: Chris Raithe

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

Eastern Box turtles are widespread in Rhode Island but are only locally common and are extremely vulnerable to the effects of habitat fragmentation. Like most large long-lived reptiles, this species is particularly sensitive to the loss of adults. Habitat management to maintain brushy fields is also important. They utilize sandy forest opening for nesting sites.

Habitat Community: Oak Forest, Type: Oak Forest

### **Status**

OTSTAT: P. SRANK: S4. GRANK: G5T5. RSGCN: L-VH. PARC: 1. CODES: RES. Res/B: 1. GRP: 4. PRIOR: 1.  
NEPARC: SC Northeast comprises <50% of US distribution: > 75% of states listed in WAP. Climate Change Vulnerability: 2050 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Residential and commercial development; Habitat preferred by developers**

- Actions:*
- *Research, survey, inventory, monitor populations; Determine metapopulation structure. Rank: 3*
  - *Land/water protection; Area sensitive species, and some habitat not protected. Rank: 3*
  - *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
  - *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
  - *Awareness and communications; Need to educate the public about habitat loss and the species' life history, publish the Reptiles of Rhode Island. Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality**

- Actions:*
- *Habitat and natural process restoration; Develop or facilitate passage through the landscape, modify road crossing areas, work with RI DOT. Rank: 3*

#### **Threat 3 - Hunting and collecting terrestrial animals; Take of species from the wild (human)**

- Actions:*
- *Awareness and communications; Need to educate the public about the damage that removal from the wild can do to the population. Rank: 3*
  - *Compliance and enforcement; Enforce compliance. Rank: 3*

#### **Threat 4 - Human intrusions and disturbance; Moving turtles from original habitat (human)**

- Actions:*
- *Awareness and communications; Need to educate the public about moving animals and what it can do to the population. Rank: 3*
  - *Compliance and enforcement; Enforce compliance. Rank: 3*

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

**Threat 5 - Problematic native species; Egg predation**

- Actions:*
- *Site/area management; Control predators. Rank: 2*
  - *Species management; Nesting area protection, monitoring, possible predator excluder cages for nests. Rank: 1*

**Threat 6 - Other ecosystem modifications; Plant succession limiting breeding habitat**

- Actions:*
- *Site/area management; Limit disturbance in nesting areas. Rank: 2*
  - *Invasive/problematic species control; Eliminate vegetation. Rank: 2*
  - *Data collection and analysis; Identify priority parcels needing serial-stage management. Rank: 3*
  - *Habitat and natural process restoration; Develop fire prescriptions and implement burn management on priority parcels. Rank: 3*
  - *Species management; Manage important habitats as required. Rank: 3*

**Threat 7 - Invasive non-native/alien species; Disease**

- Actions:*
- *Species management; Monitoring and management. Rank: 2*
  - *Ex situ conservation; Headstarting and captive breeding. Rank: 1*
  - *Outreach; Develop and provide educational information about invasive species. Rank: 2*
  - *Planning; Develop and implement invasive species management program. Rank: 2*

## Common Ribbonsnake

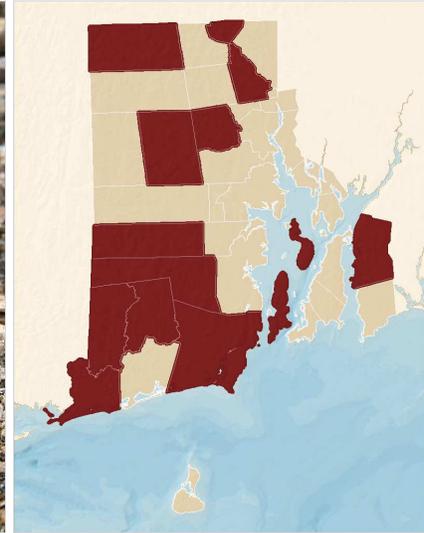

*Thamnophis sauritus sauritus*

### HERPETOFAUNA

Reptiles

Photo: Chris Raitel

~See map disclaimer in profiles introduction

### **Distribution & Abundance**

The ribbon snake is widespread but is uncommon and quite localized. Its habitat requirements in this area are poorly known but thought to depend on high quality wetlands that have robust amphibian populations. Like most snakes, mortality from auto traffic is one of the greatest threats to populations

Habitat Community: Coastal Plain Peatlands, Type: Graminoid Fen

### **Status**

STSTAT: C. SRANK: S3. GRANK: G5. RSGCN: L-VH. PARC: 1. CODES: RES. Res/B: 1. GRP: 7. PRIOR: 1. NEPARC: SC Northeast comprises <50% of US distribution: > 75% of states listed in WAP. Climate Change Vulnerability: 2050 (Precipitation change)

### **Threats and Actions**

#### **Threat 1 - Housing and urban areas; Localized species with a specialized habitat, affected by habitat loss**

*Actions:*

- *Land/water protection; Depends on robust amphibian populations for food source; Construct new and maintain amphibian habitat, including breeding habitat (seasonal pond project).*

*Rank: 3*

- *Site/area management; Some habitat not protected. Rank: 3*
- *Alliance and partnership development; Development of conservation partnerships will be necessary to protect habitat. Rank: 3*
- *Policies and regulations; Need policies and regulations to protect habitat. Rank: 3*
- *Awareness and communications; Need to educate the public about habitat loss and the species' life history, publish the Reptiles of Rhode Island. Rank: 3*
- *Research, survey, inventory, monitor populations; Determine metapopulation structure. Rank: 3*

#### **Threat 2 - Roads and railroads; Road mortality**

*Actions:*

- *Habitat and natural process restoration; Develop or facilitate passage through the landscape, modify culverts, work with RI DOT. Rank: 3*

#### **Threat 3 - Human intrusions and disturbance; Persecution of snakes by humans**

*Actions:*

- *Awareness and communications; Need to educate the public about the species' value and life history, publish the Reptiles of Rhode Island. Rank: 3*

#### **Threat 4 - Household sewage and urban waste water; Road runoff**

*Actions:*

- *Site/area management; Protect habitat from chemical runoff, work with RI DOT. Rank: 3*
- *Habitat and natural process restoration; Restore habitat from chemical runoff where possible.*

*DRAFT Rhode Island Wildlife Action Plan Species Profiles*  
**Species of Greatest Conservation Need**

*Rank: 3*

**Threat 5 - Invasive and other problematic species and genes; Disease**

- Actions:*
- *Species management; Monitoring and management. Rank: 2*
  - *Ex situ conservation; Headstart and captive breeding. Rank: 2*

**Threat 6 - Natural system modifications; Loss of habitat from plant succession**

- Actions:*
- *Data collection and analysis; Identify priority parcels needing serial-stage management. Rank: 3*
  - *Habitat and natural process restoration; Develop fire prescriptions and implement burn management on priority parcels. Rank: 3*
  - *Species management; Manage important habitats as required. Rank: 3*

**Threat 7 - Pollution; Habitat degradation from impairment of water quality**

- Actions:*
- *Data collection and analysis; Assess effects of water withdrawals. Rank: 2*

**Threat 8 - Residential and commercial development; Loss of riparian vegetation, fringe wetlands due to shoreline development, bulkheads, and poor urban development**

- Actions:*
- *Site/area protection; Wherever possible, 'soft' approaches (such as beach nourishment, vegetative plantings, and placement of large woody debris) to shoreline modification should be used. Rank: 3*

***Refer to the Community: Coastal Plain Peatlands, Type: Graminoid Fen - Habitat Profile for additional threats to this species.***
